THE
SIXTH REPORT
OF THE
COMMISSIONERS
APPOINTED TO INQUIRE INTO
THE MANAGEMENT
OF THE
POST-OFFICE DEPARTMENT.

Presented to both Houses of Parliament by Command of His Majesty.

LONDON:
PRINTED BY W. CLOWES AND SONS, STAMFORD STREET,
FOR HIS MAJESTY'S STATIONERY OFFICE.

1836.

TO THE LORDS COMMISSIONERS OF HIS MAJESTY'S TREASURY.

SIXTH REPORT of the COMMISSIONERS appointed to INQUIRE into the
MANAGEMENT of the POST OFFICE DEPARTMENT.

IN considering the different branches of the service of the Post Office, we have particularly directed our attention to the packet establishments as well on account of their extent and importance, as of the large annual expenditure which they occasion.

A Report on all the packet stations, with the exception of Dover, was made in 1830, by the Commissioners of Revenue Inquiry, and four of these stations were again considered in 1832, by the Committee on Post Communication with Ireland.

Your Lordships will not, we trust, deem it irrelevant, if, in the course of our remarks, we frequently refer to these Reports, while we reconsider many of their suggestions, and the manner in which those suggestions have been carried into effect under the present system of Post Office administration: It will remain for your Lordships to decide on the best mode in which the packet service can in future be performed, in order to secure the regular and rapid transmission of our domestic and foreign correspondence, without any unnecessary charge on the revenue.

On looking at the receipts and expenditure during the last four years, your Lordships will perceive that the total annual loss to the Post Office averages £38,739. 3s. a-year, without taking into consideration the original cost of the packets, amounting to £273,018. App. (A.) No. 3.
Ibid. No. 1.

From the 5th of January, 1832, to the 5th of January, 1836, the receipts and expenditure of the different stations have been as follows:

	Receipts.		Expenses.		Loss.	
	£	s. d.	£	s. d.	£	s. d.
Dover . . .	45,061	3 10	63,006	7 8	17,945	3 10
Weymouth . .	15,735	1 1	22,443	14 0	6,708	12 11
Milford . . .	6,616	7 2	53,581	1 7	46,964	14 5
Holyhead . .	38,583	6 5	97,089	16 10	58,506	10 5
Liverpool . .	94,275	19 5	110,050	17 8½	15,774	18 3½
Portpatrick .	6,505	8 0	15,562	2 6	9,056	14 6
Total . . .	206,777	5 11	361,734	0 3½	154,956	14 4½

Ibid. No. 3.

There are altogether twenty-six steamers belonging to the Post Office, and attached to the different stations. We subjoin a return of their tonnage, power, and the expense in their building and outfit. Ibid. No. 1.

App. (H.) No. 12.

We considered it to be our duty to ascertain the nature of the control exercised by the General Post Office over the management and expenditure of this branch of the public service.

Ibid. No. 4.

The Accountant-General informed us, that the only examination the packet accounts were subjected to in his department, was to see that there were proper vouchers for the expenditure, and that the receipts agreed with the daily bills: he had nothing to do with the propriety of the expenditure. "The only person in the General Post Office who superintends this part of the public service, is Mr. Freeling. He generally examines the accounts of the agents, and sees that there has been no improper expenditure, or that things have been duly authorised."

After we had seen the form in which the packet accounts and documents were transmitted to the General Post Office, and examined the several officers through whose hands they passed, we found that it was quite impossible to obtain in London any satisfactory information relative to the management of the stations.

It did not appear to us that the superintendence exercised by the office in London over the packet establishments, had the effect of producing a substantial check over the expenditure; the control of which seemed to be almost wholly left to the agents.

Under these circumstances, we submitted to your Lordships, that it would be desirable to institute an inquiry at the different stations, in order to obtain the necessary information on the spot.

App. (E.)

We at the same time requested that you would sanction the appointment of a naval officer to assist in this investigation. Your Lordships having approved of our proposal, Captain Evans, R.N., was recommended to us by the Lords of the Admiralty for this purpose, on account of his skill and experience in the steam service of the Royal Navy, and we accordingly directed him to proceed, in conjunction with our Secretary, Mr. Gardiner, to the several packet establishments. The evidence taken by these gentlemen in the course of their inquiry will be found in the Appendix, as well as a Special Report which we directed them to make on the Holyhead station, in consequence of information which we received from them during their stay there.

We shall proceed, in the first place, to submit to your Lordships our observations upon the several stations, and shall then subjoin such general recommendations as appear to us to be expedient.

DOVER.

DOVER is now the only station at which the Post Office have a packet establishment for the transmission of the correspondence between this country and foreign states.

There is a double line of communication between Dover and the opposite coast, and five packets are kept for the performance of the service. Three of them are employed in the conveyance of the mails from Dover to Calais; and the other two maintain a communication with Ostend, to which place mails are now sent four times a-week. App. (B.) No. 24.

This station differs from the five others, inasmuch as the arrangements with respect to both these lines of communication have been made subject to treaties with the French and Belgian Governments. Ibid. No. 27 & 28.

The packets to Calais convey only the mails from this country; and the French Post Office delivers its own mails and dispatches at Dover. By the treaty with the Belgian Government for increasing the number of communications with Ostend, the Postmaster-General undertakes the conveyance of the mails by sea, both going and coming; and the Belgian Government engages to pay 1000*l.* a-year as its proportion of the expense. Ibid. No. 28.

It appears by the following Return made by the Post Office, that the expenditure has considerably exceeded the receipts during the last four years.

An Account of the Receipts and Expenditure of the Dover Station during the last 4 years.

Years.	Receipts.			Expenditure.			Loss.		
	£	s.	d.	£	s.	d.	£	s.	d.
1832	9,231	11	6	11,198	1	1	1,958	9	7
1833	13,118	6	0	15,061	16	10	1,948	10	10
1834	11,898	11	9	20,368	16	2	8,470	4	5
1835	10,817	14	7	16,385	13	7	5,567	19	0
	45,061	3	10	63,006	7	8	17,945	3	10

The expense incurred for repairs of packets on this station for the three years ending 5th January, 1834, has amounted to £16,229. The repairs of the Dover packets are principally executed in the Thames, whilst all the other vessels belonging to the Post Office are repaired at Holyhead. On inquiring into the control exercised over this large expenditure, we find the effects of the system, which we have already described, of the Post Office relying almost implicitly upon the vigilance and ability of the agents, strongly exemplified by the state in which we have found the management and accounts of this department at Dover. Ibid. No. 2.

We shall, in the first place, call your Lordships' attention to the manner in which the stores are received and issued.

The coal is procured by contract with a house in London, and has been latterly supplied at the rate of 23*s.* per ton, which includes the expense of laying it into store at Dover. The price has been reduced considerably since the contract was made; but it is a running contract, and has not been thrown open for some years. App. (B.) No. 10.

When the coals are delivered, neither the agent, nor any one on the part of the Post Office, attends to ascertain whether the quantity corresponds with the charge in the contractor's bill. The agent always relies on the meter's account as correct; which, however, it is stated can be but little depended upon, as even in the case of coals supplied to private individuals, it is frequently found to be inaccurate. But if there is no sufficient check upon the quantity of coals received into store, the check on the issue of coals is still less complete. The coals in store are entrusted to Philip Brayley, a person who is employed by the Post Office to ply for passengers. He receives no allowance from the agent for his care of this store, or for superintending the delivery of the coals, but has occasionally a small gratuity from the contractors. Brayley is seldom present when coals are issued, but is in the habit of giving the key of the store to a carter or porter, who puts the coals into bags, and takes them to the vessel. They are not weighed or App. (H.) No. 5.

App. (B.) No. 21.

App. (B.) No. 10.

Ibid. No. 12.

Ibid. No. 21.

Ibid. No. 10.

Ibid. No. 21.

Ibid. No. 2.

- measured by any one, but the carter forms an estimate of the quantity from the size of the bags, and charges for putting them on board according to this estimate. From this charge the monthly account of coals is made out and transmitted to the Post Office.
- App. (B.) No. 11. Coals are occasionally purchased in Calais and Ostend. The price paid at Calais is 33s. 10½d. a ton. The agent for the French Post Office packets lays in the best Newcastle coals at about £1. per ton. The price paid at Ostend for coals of very inferior quality is 23s. An offer has been made to supply them at 18s.
- Ibid. No. 10.
Ibid. No. 26. All stores of ordinary consumption (with the exception of coals) are purchased from tradesmen in Dover, by the mates, engineers, or firemen of the packets, without any demand being made, or order given, for the supply of these stores.
- Ibid. No. 24.
Ibid. No. 25. The tradesmen's Bills are collected quarterly by Mr. Norwood, the Postmaster, who officiates as clerk to the agent. As soon as he has made a list of them, and ascertained the amount, he receives a check from the agent for the total sum. He does not consider it his duty to make any observations as to the charges.
- Ibid. No. 10.
Ibid. No. 19. The accounts are not examined with a view to ascertain whether the stores charged have been actually supplied; nor are any observations ever made on the prices.
- Ibid. No. 11. The bills are not certified by the commanders, or other officers; and the agent acknowledges that the only check he has, is "his dependence upon the honour of the tradesmen not to charge for more than has actually been delivered."
- Ibid. The quantity of stores supplied to any vessel cannot be ascertained from the accounts, and there are no other means of knowing any variation that may occur in the price of small stores, but by inquiring of the tradesmen who supply them.
- App. (B.) No. 12. The private steam companies at Dover find it advantageous to obtain their stores from London, whilst the mates and engineers of the Post Office packets order them at their own discretion from the tradesmen.

Your Lordships will observe, from the evidence which has been collected from the servants of the Post Office, that the agent, so far from exercising any real control over the service or the expenditure, has only acted as a screen to cover the responsibility of others. He is not a seaman, nor sufficiently acquainted with steam navigation to be able to form an opinion of the repairs requisite for the vessels or the machinery. We see no reason to entertain the slightest suspicion unfavourable to his character or integrity; but from the account which he appears very frankly to have given of his own qualifications for the situation which he holds, we cannot consider him to be able competently to discharge the duties which belong to it.

- Ibid. No. 10. From the statement he has made of his services, we find that he had been for many years employed as a packet-agent; but at a period when the duties of such a situation were of a very different character from what they now are. The packets at that time were the property of the commanders, and maintained at their own expense. He was subsequently appointed a Riding Surveyor, and when his advanced years and infirmities rendered him unfit for that office, he was placed, in 1832, in command of the Dover station.

- Ibid. No. 16. Notwithstanding the great excess of the expenditure over the receipts on this station, we are of opinion that facility of correspondence is of such paramount importance, that we should not hastily blame any outlay which appeared to conduce to the regularity of Post Office communication. A reference to the evidence of the captains will, however, convince your Lordships that the vessels now provided by the Post Office, are neither adapted to the regular and speedy transmission of the mail, nor otherwise to the convenience of the public, and that unless the packets are greatly improved, the receipts are likely to be diminished to an incalculable extent, as they will be unable to compete with the vessels which private companies are now placing upon this station.
- Ibid. No. 12.
Do. 13.
Do. 16.
Do. 17.

- Ibid. No. 12. "Captain Hamilton, the senior commander in the service, states, that the Post Office packets have not been improved in the same degree as those of the private companies, and consequently they compete with them on very disadvantageous terms. Had the steamers been the property of the commanders, as the Harwich packets formerly were, they would not only have kept pace with the improvement of the vessels of the private companies, but would have put on such a superior class of vessels as would have entirely done away with any private competition."

We cannot here omit observing that the provisions of the treaty entered into with the French government, in 1833, appear to be disadvantageous to the English packets, as they are obliged to deliver their mails at Calais at eleven o'clock A.M., and must consequently be in readiness to start from Dover immediately on the arrival of the London mail there. The harbour of Dover being dry at low water, the vessels are frequently obliged to anchor in the roadstead all night, and keep their steam up at an expenditure at least equal to what would be required for an ordinary passage. The expense and inconvenience of embarking under these circumstances, in open boats, prevent many of the passengers from going by the mail packets, and they lose entirely the freight on carriages, horses, bullion, &c. One of the commanders estimates this loss at 4000*l.* a year.

App. (B.) No. 12.
App. (B.) No. 27.
App. (B.) No. 16.

Ibid. (B.) No. 16.

App. (B.) No. 16.
Ibid. (B.) No. 10.

The rate of fares for the conveyance of passengers in the French and English packet-boats, was fixed by one of the articles of that treaty, and it is expressly provided that no alteration can be made in the fares without the consent of the two offices. A competition, however, exists, equally injurious to both, which has induced them practically to disregard the fixed rates, and is the cause of much complaint from passengers.

App. (B.) No. 28.

App. (B.) Nos. 10,
16, 18, 20, 21 & 22.

The English plyers at Dover and Calais are allowed to exercise a discretion in bargaining with cabin passengers to carry them for half, or deck fares; and one party is thus charged not quite one-half what the other is for precisely the same accommodation.

App. (B.) No. 21
& 22.

OSTEND.

By the treaty entered into with the Belgian government, in October, 1834, it was agreed that a communication should be maintained between Dover and Ostend four times a week in place of twice, as had formerly been the case. The days of departure from Dover are Tuesday, Wednesday, Friday, and Saturday, and the packets return from Ostend the following days.

App. (B.) No. 28.

As the two mails which arrive at Dover on Saturday and Sunday are delivered in London at the same time on Monday, the two packets give only the advantage of one additional mail from Belgium.

All the Belgian correspondence, even that passing between Dover and Ostend, must, under the present Post Office regulations, be sent through London, as they do not permit any bags to be made up at Dover for Belgium, nor at Ostend for Dover. The letters are, therefore, sent up to London from Dover, returned again there, charged with the inland rates of postage, and subjected to an unnecessary delay of two or three days before they reach their destination. We are not surprised that the inhabitants of Dover, and other towns similarly situated, should, under these circumstances, abstain from sending this part of their correspondence through the medium of the Post Office.

App. (B.) No. 11.

However trifling in amount this correspondence may be, we think it very objectionable that it should be prevented from being sent in the most expeditious manner. We are also of opinion that it would be worthy of your Lordships' consideration, whether a line of daily packets should not be established between this country and Ostend, provided the Belgian government would undertake to bear a fair share of the additional expense which it would occasion.

WEYMOUTH.

THERE are three packets on this station, which convey the mails twice a-week from Weymouth to Guernsey and Jersey. They leave Weymouth on Wednesdays and Saturdays, and return on Tuesdays and Saturdays.

In 1833, Captain Stevens, a naval officer, was appointed agent. He had been, for twenty years previously, a commander of Post Office packets on different stations, and twelve years in command of a steamer at Holyhead. "He is most decidedly of opinion, that were he not a practical seaman, and well versed in steam navigation particularly, he could not possibly execute the duty of a packet agent with credit to himself, or advantage to the public; nor could he possess

App. (C.) No. 8.

that control over both the captains and engineers of the packets, which the necessity of the service and the issue of stores require."

App. (C.) No. 9. The only accounts which Captain Stevens received, connected with the packets, "were contained in a private cash-book of his predecessor, which does not afford the means of ascertaining with any degree of accuracy the receipts or expenditure of the station previous to 1833." The accounts of the former agent were destroyed, although we have no reason to suppose that this was done from any improper motive.

Since 1833, the accounts have been kept with great regularity, and a very efficient and proper control exercised over the receipts and expenditure, as far as depended upon the agent.

Ibid. No. 10. Stores are obtained from tradesmen here as at Dover, but are never supplied without an order from the agent,—a demand being made for them by the commander, and signed by the engineer—if the articles required are for the engine room.

Ibid. No. 13. "The mates strictly adhere to the orders of the agent with respect to seeing the stores weighed on board, and also that they are of the best quality."

Ibid. No. 11. The coals are obtained by contract, and are delivered from the contractor's store. The second mate has every cwt. weighed and put on board the packets, and sends in a monthly account of the quantity and quality. The commanders and engineers send another account in their monthly report, and the agent also receives from the chief mate (or master) a printed docket in which the daily issue is inserted. Advertisements for contracts are issued yearly,—the tenders are received by the agent, and transmitted to the Postmaster-General for his selection.

Ibid. No. 8. The expenditure of the Weymouth station has exceeded the receipts by £6708. 12s. 11d. in the last four years; but the agent "is convinced that with larger and faster vessels a very considerable revenue would be returned from passengers alone, especially if a French mail was sent that way."

An Account of the Receipts and Expenditure of the Weymouth Station during the last four years.

Years.	Receipts.			Expenditure.			Loss.		
	£	s.	d.	£	s.	d.	£	s.	d.
1832	3,782	1	5	5,396	1	6	1,614	0	1
1833	3,691	4	5	5,304	0	9	1,612	16	4
1834	4,339	5	10	6,081	17	5	1,742	11	7
1835	3,922	9	5	5,661	14	4	1,739	4	11
	15,735	1	1	22,443	14	0	6,708	12	11

App. (A.) No. 3.

App. (C.) No. 8.

The agent, commanders, and all the engineers and other officers, recommend the improvement of the packets, by lengthening them, and giving them increased power.

We would call the attention of your Lordships to the following statements of some of the captains employed upon this station.

Ibid. No. 11.

"Had the steamers been the property of the commanders, as the sailing-packets formerly were, self-interest would have compelled them to alter the construction of the packets, and place greater power in the engines, to enable them to compete with the private steamers from Southampton to the Channel Islands."

Ibid.

"The private companies running steamers to Guernsey and Jersey, have seen the necessity of giving additional power to their vessels, which were formerly of the same class as the Post Office steamers now are, and constantly alter and improve them, as the science of steam navigation increases."

Ibid. No. 13.

Ibid. No. 11.

The Post Office packets have remained without improvement, and serious loss appears to have ensued from passengers giving a preference to the private vessels from Portsmouth and Southampton, which are of superior power and speed.

Ibid. No. 12.

Ibid. No. 13.

It is stated that, independent of every other advantage which would be obtained by improving the packets, the saving in the consumption of coals would more than compensate the expense.

Notwithstanding the great distance of this station from Holyhead, the packets are sent there for repairs, which occasions much expense and inconvenience

from the length and uncertainty of the voyages, and the necessity they are under of laying in coals at some intermediate port. App. (C.) No. 8.

The voyage to and from Holyhead averages about ten days. "The expense attending sending vessels there from so distant a port as Weymouth might be avoided by having the repairs done at Portsmouth, which a packet could reach in a few hours; and if so disabled as to be unfit to proceed to Holyhead without first undergoing considerable repair at Weymouth, she might be towed to Portsmouth by one of the other packets, without any delay to the service." Ibid.

Suggestions have been made for extending and improving the post communication by means of the packets on this station. No letters for any part of France can be sent by the Weymouth packets.

A direct post communication with St. Malo or Granville would probably be productive of a considerable additional income from passengers, and the acceleration of the correspondence would be also attended with an increase of revenue, and afford a great convenience to the public. Ibid. No. 15. Ibid. No. 14.

There are no possible means of preventing the conveyance of letters by private individuals through Jersey to France, nor can it be expected that any precautions can prevent individuals from sending and receiving their correspondence in this manner, when, if put into the Post Office, it would have to pass through London and reach its destination *viâ* Dover. Ibid. No. 8.

The agent is of opinion that the Government packets at present on the station, if they had additional power, would be quite sufficient for maintaining a communication with the Channel Islands, and one of the ports on the French coast, twice a week. Ibid.

He is also of opinion that they would get the greater number, if not the whole, of the passengers that now go by the private steamers, and that the additional expense to the Post Office of sending the packets on from Jersey to St. Malo, or Granville, would be very trifling—"merely the increased expenditure of coals and small stores proportionate to the additional number of hours the vessels would be at sea." Ibid.

The correspondence between the Channel Islands, Bristol, Ireland, and the manufacturing districts in England, is much retarded, owing to the present circuitous route by which letters are sent to Bristol. An offer has been made to obviate this inconvenience, without any expense to the Post Office, by carrying the mails by the direct road from Weymouth to Bristol every morning. Ibid. No. 14. Ibid. No. 16.

Proposals have also been made for conveying the mails for the Channel Islands from Southampton, in place of Weymouth: and we have considered whether it would be advisable to recommend the removal of the packets from the present station to Southampton or Portsmouth. In a merely financial point of view, Southampton would, no doubt, be preferable; but we are of opinion, on account of the shortness of the sea voyage in a difficult navigation, that the present station ought to be retained, as the passage is likely to be made from Weymouth with greater certainty than from any other place. We refer your Lordships to the Report of Captain Stevens on this subject. Ibid. Nos. 21 & 22. App. (C.) No. 20.

The private steam-vessels at Southampton may advantageously be had recourse to for the conveyance of ship-letters to the ports to which they trade; and due notice ought to be given by the Post Office of their intention to send mail-bags regularly by them.

We think that the improvement of the packets, and the acceleration of the mail communication, especially with Bristol, would render Weymouth a very efficient packet station; and the charge for its maintenance would in all probability be reduced by the increased number of passengers.

We beg, in conclusion, to express to your Lordships our satisfaction at finding a system of control and management exercised over this station which is highly creditable to Captain Stevens, the agent.

MILFORD.

THE establishment at Milford has been maintained at an expenditure which, as compared with the receipts, far exceeds that of any of the other Post Office stations.

B

From the 5th April 1824, to the 5th January 1836, the total receipts have amounted to £26,592. 1s. 6d., and the expenditure during the same period, has been no less than £220,986—showing a loss of £194,394.

The correspondence conveyed by the Milford packets has been so limited, and the expense of maintaining the station so very great, that we doubt if the benefits which have hitherto resulted from the Milford establishment are at all commensurate with the expense incurred for it. Letters for many of the towns in the south of Ireland are sent *viâ* Holyhead, although the distance is considerably shorter by Milford. The inefficient state of the packets, the consequent uncertainty of the passages which they make, and the want of any improvement in the inland communication, in a great measure account for this station being so little used for Post Office purposes.

The same causes, added to the want of accommodation at Milford and Dunmore, and the great inconvenience of embarking in open boats in Milford Haven, appear to have prevented passengers from using this line of communication. With respect to the mode of obtaining the stores at this station, we shall quote the evidence of the officer placed in charge of it.

App. (D.) No. 9.
Ibid. No. 10.
Ibid. No. 11.

Captain Bevis, who was appointed agent in September last, says, "that on his arrival there he was particularly struck with the irregular manner in which the stores were supplied for the packets: that he considered the system adopted by the Post Office the very worst possible. He felt assured that if the stores were obtained by contract, in place of being always supplied by the same tradesmen, a saving of full 30 per cent. would be effected, and a better quality of stores received.

Ibid. No. 9.

"Putting economy altogether out of the question, Captain Bevis objects most strongly to getting the stores from a tradesman here, and always from the same person; inasmuch as it affords room for speculation, and puts the officers of the establishment in contact with the tradesmen employed, in a manner which ought not to exist in a Government department."

Ibid.

An old hulk, moored in the harbour, is used as a *depôt* for the coals and other articles in store. There is also on board of this ship a forge and workshops, where any small repairs are executed. A storekeeper resides on board, and superintends the receipts and issues of the stores. He was formerly mate of a packet: his salary was then £4 a lunar month, with provisions, which he estimated at £1. 8s. more. He now receives only £4. 4s. a month, without provisions. His duties are very arduous, and his salary seems quite inadequate to the responsibility of his situation. In addition to the superintendence of the receipts and issues of stores, he has all the smiths, boiler-makers, and other workmen under his control; some of whom receive salaries very much higher than his own.

Ibid. No. 14.

App. (D.) No. 14.

Ibid.

Ibid.

Ibid.

Ibid. No. 9.

The average value of coals and other stores in charge at Milford is about £2000. No part of these stores are supplied by contract.

The agent purchases coals when and where he thinks proper; and tallow, oil, cordage, and other small stores, which were formerly brought from Liverpool, are now bought from a tradesman at Milford, under the authority of the Post Office. The same tradesman is always employed.

Ibid. No. 14.

Ibid.

"Mr. Davies (the storekeeper) thinks it would be much better for them to have all their stores from the Dockyard, as they would be of the best quality, and they would be sure of having the proper quantity delivered on board."

Ibid. No. 10.

Ibid. No. 11.

Ibid.

The packets employed at Milford are stated to be very deficient in power, and not well adapted for the service.

Captain Roberts says—"The Milford station, from being more exposed to the western ocean than either Liverpool or Holyhead, ought to have vessels of a class and power at least equal to any of the packets employed on the other stations; whereas the vessels on the Milford station are very inferior to those on the Liverpool and Holyhead stations."

Ibid. No. 4.

Three of the packets have engines of 80-horse power, the remaining one, the *Aladdin*, has 100-horse power; while the Liverpool packets have engines of 175-horse power each.

Ibid. No. 12.

Some trifling repairs are performed by the workmen at Milford; but in case a general refit is required, or any serious damage has been sustained, the vessels are sent to Holyhead.

One packet, the Aladdin, was taken off the station four times during the last year. In the early part of the season she was at Holyhead for six weeks, having new boilers put in, and in October and November three different times there, getting some repairs done to the machinery. App. (D.) No. 12.

With a naval yard immediately adjoining the Milford station, it appears extraordinary that no advantage should have been taken of the means which it afforded for repairing the packets.

“ From the vicinity of the Dockyard at Pembroke, Captain Bevis is assured that repairs would be much cheaper and better executed there than at Holyhead.” Ibid. No. 9.

Captain Halland says—“ Hobbs’ Point Pier is close to the Naval Dockyard, and were an arrangement made with the Admiralty for repairing the packets there, a great saving of time and expense, now incurred by their being sent to Holyhead, would ensue.” Ibid. No. 10.

In the Report of the Select Committee of the House of Commons on Post Communication with Ireland, in 1832, it is stated that “ Waterford is the natural and direct line of communication between London and Bristol and the south of Ireland ; yet it has been so neglected as to be of little use. Letters from Cork, Tralee, Limerick, and Wexford are sent by the circuitous route of Holyhead to London and Bristol, although subject to extra postage, in order to secure an earlier arrival.” Report of the Select Committee of the House of Commons, on Post Communication with Ireland, pp. 23 and 24.

The Committee, with a view to place this line of communication on an efficient footing, recommended the improvement of the South Wales roads, and the establishment of better packets on the Milford station ; and that all the correspondence from London and the south of Ireland should be sent for distribution to Waterford. They anticipated, if the alterations they proposed were adopted, that the mails might be expected in Waterford about noon, and by fixing the departure of the inland mails at seven P. M., ample time would be allowed for the arrival of the packets. The recommendations of this Committee were not attended to, and the station has been maintained, as we have already shown, at an enormous expense, in proportion to the receipts and the amount of correspondence transmitted by that line. Ibid. p. 25.

The necessity of having a permanent Post communication between the southern parts of England and Ireland having been fully admitted by successive Governments, we had only to consider in what manner this accommodation could be rendered of the greatest utility to the public ; and if any change could be effected which would be likely to reduce the charge of its maintenance.

The number of steamers plying from Bristol to the ports of Cork and Waterford led us to inquire whether the mails might not be carried from the Bristol Channel ; in which case a contract could probably be obtained on advantageous terms. We found, however, some great obstacles to this plan.

From the difficulties attending the navigation of the Bristol Channel, and the great additional length of the voyage, we apprehend that the passage could not be depended upon with that degree of certainty which is so essential in Post communication.

The Government has recently laid out a large sum of money for the purpose of improving the Milford Station. A pier has been constructed at Hobbs’ Point, expressly for the Post Office packets, and every necessary accommodation for passengers has been provided.

We have been informed by Mr. Louis, that as soon as the coaches can travel by the new line of road from St. Clear’s to Hobbs’ Point, the mails may be put on board the packets by twelve o’clock at night, which will effect a considerable saving of time, as the packets do not leave Milford at present until four A. M. App. (H.) No. 19.

We have before adverted to the causes which appear to have deterred passengers from travelling by Milford. These will be entirely removed when the packets start from Hobbs’ Point, where passengers, horses, and carriages can be embarked without any delay or inconvenience. App. (D.) No. 10.

At present there are no means of getting on board, except by walking across a wet beach, and getting into an open boat, in order to reach the packet, which lies at some distance from the shore ; and the length of time required to get carriages and horses embarked has frequently delayed them a day, and has almost entirely prevented families from travelling by Milford. Ibid.

At Dunmore also there is a want of all proper accommodation for passengers ; and we were informed that the harbour there has neither depth of water nor ca- Ibid. (D.) No. 18. Ibid. No. 13.

capacity sufficient for the reception of that class of packets best adapted for the station.

We therefore directed Captain Evans to ascertain whether it would be practicable to carry the mails direct to Waterford Quay.

App. (D.) Nos. 18,
28, 29, and 30.

From his report, and the testimony of the most experienced practical seamen acquainted with the navigation of the river, we are induced to believe that no difficulty will be found in running the packets up to the City of Waterford, and that all further expense on account of works at Dunmore may be avoided*.

We therefore recommend to your Lordships, that packets of that class and power which may be considered best adapted for conveying the mails with regularity and expedition, from Hobbs' Point to Waterford, should be placed on this station.

Your Lordships having agreed to sanction an advance of £7000 to enable the trustees of the Carmarthen road to complete the small portion of the work which now remains unfinished, we hope that in the course of a few months the coaches may be able to run to Hobbs' Point; and by having a superior class of packets on the station, we think the mail will arrive in Waterford by about ten A. M., and may be depended upon with certainty by noon.

This will enable a large correspondence for Cork, Limerick, and the south of Ireland, which is now sent *viâ* Holyhead, to reach its destination in less time, and with equal certainty as by the present route.

HOLYHEAD.

App. (E.) No. 24.

Ibid. No. 71.

WE have directed much of our attention to this establishment, which is by far the most considerable that is under the Post Office, comprising, as it does, a packet station, through which the principal part of the Post communication between England and Ireland passes, and likewise an extensive yard, which has been formed for the manufacture of boilers, and the repair of the vessels and machinery of the packets on the Weymouth, Milford, Liverpool, and Port Patrick stations.

Since the union between England and Ireland, it has become especially important that the Government should provide some one station where a safe and speedy passage may be at all times secured as far as possible, and that the packets there should be maintained upon the most efficient footing; both with a view to the regular transmission of the mails, and to the comfort and accommodation of the passengers; nor are we disposed to recommend to your Lordships any reduction of expenditure which would interfere with the attainment of these objects.

Ibid. Nos. 62, 23,
31, 6, 62, 25.

There are at present six steamers employed in the conveyance of the mails between Holyhead and Kingstown; an extra steamer is laid up in ordinary. There are four sailing vessels which bring the coals required for the use of the steamers, and a cutter which has not been used for any public service for the last four years.

App. (H.) No. 27.

The inquiries of Mr. Gardiner and Captain Evans have been particularly directed to the state of the land establishment. We have already had occasion to call the serious and special attention of your Lordships to some of the evidence which they received; we now submit the whole to your consideration, together with that of the officers of the Post Office, who were particularly connected with this department. We must at the same time express our deep regret that such a state of things should have been found to exist in any branch of the public service.

The stores required at Holyhead are of large amount, and as there are no tradesmen in the town from whom they can be obtained, a supply is kept in store of all articles necessary for the maintenance of the packets on the station, the general repair of the vessels, the manufacture of boilers, and the repairs of machinery.

Appendix to 22nd
Report of Revenue
Commissioners, p.
437.

In April, 1830, a Return was made to the Revenue Commissioners of the value of stores in charge of the officers at Holyhead, and the cost was stated at £3363.

* Since 1815 upwards of £100,000 has been expended on works at Dunmore.

They then expressed their surprise at the mode in which these stores were supplied; no part of them being obtained by contract, but an unlimited power given to the agent of addressing requisitions for stores to the deputy post-master at Liverpool, who supplied them. Appendix to 22nd Report of Revenue Commissioners, p. 20.

From a Return which we have obtained, it appears that the value of stores now in charge at Holyhead amounts to upwards of £12,000, and on inquiring of the agent whether the Post Office had not recommended that means should be taken for obtaining any part of the stores by contract, this officer stated that he had been at one time directed to make inquiries with a view to ascertain upon what terms coals could be supplied by contract, but that he found, from the terms proposed to him, that it would not be advantageous to procure them by contract. App. (E.) No. 115.
App. (E.) p. 22.

A reference to the agent's own evidence, however, will show that the only parties to whom he then applied on the subject were the persons who had previously furnished the coals for the packets, and who have continued to supply them ever since. Ibid. p. 22.

All the stores, with the exception of coals and timber, are purchased by Mr. Banning, the postmaster at Liverpool, who is stated by the agent to be responsible for the quality and price of these stores—a responsibility which Mr. Banning disclaims. Ibid. p. 31.
Ibid. No. 27.
Ibid. (H.) No. 9.

Mr. Banning, although he admits his own incompetency to judge of the quality or prices of stores, and claims irresponsibility in respect of them, has nevertheless, by direction of the General Post Office, purchased them for the Holyhead station, and occasionally for the packets at Milford. The Post Office never having employed their own packet-agent at Liverpool for this purpose. Ibid. (E.) No. 109.

Mr. Banning receives no emolument for the service which he has thus performed. Ibid. (H.) No. 9.

The stores purchased at Liverpool are conveyed to Holyhead in vessels belonging to the resident engineer. Ibid. (E.) Nos. 32, 23, 52.

There are other vessels (equally seaworthy) trading regularly between Holyhead and Liverpool, but the agent did not employ them to convey Post Office stores, although the commanders had offered to carry them at a much lower rate of freight than was paid to the resident engineer. Ibid. Nos. 36, 52.

We cannot too strongly express our opinion of the impropriety of such a practice in any public department. We conceive that in all cases an officer of the Government should be prohibited from having any interest in the supply or freight of stores.

Some of the stores received from Liverpool are stated by the commanders and engineers to have been of very inferior quality; particularly the oil and tallow supplied for the engines, which were occasionally unfit to be used in the machinery, and offensive and disagreeable to the passengers. Ibid. Nos. 61, 87, 68, 69, 74, 75, 77, 72, 116.

Certificates from one of the tradesmen at Liverpool, who supplies these stores, have been transmitted to us by the Post Office, with a view to show that they were not of inferior quality; but, on referring to the evidence of Mr. M'Knight, it will be seen that these certificates do not apply to the stores complained of, but to stores which have been recently received at Holyhead. Ibid. No. 116.

It is stated that the stores for the use of the packets are generally issued to the mates and engineers, who keep pass-books in which every article they receive is entered. No receipts are given for such stores. Ibid. Nos. 58, 59, 32.

These pass-books, on being compared with the charges in the store-keeper's day-book, did not at all correspond; many articles being charged by the store-keeper as issued to the packets, which were not inserted in the pass-books. Ibid. Nos. 60, 117, 80, 81, 82, 83, 84, 85.

No account was taken of old stores returned into store from any of the packets or colliers; nor did it at all appear how they were disposed of. Nos. 59, 60, and 116.

The agent at Holyhead permitted the officers of the dock-yard to sell stores of every description to private individuals, or to purchase them for their own use. We understand that this practice, which we consider to be most objectionable, is strictly prohibited in his Majesty's naval yards. Ibid. Nos. 22, 32, 34, 55, 37, 72, 116, 23.

The resident engineer was also permitted to manufacture articles for his own private use and emolument in the dock-yard, to employ the workmen, and to take whatever materials he required from the government stores, using the iron which was entrusted to his own charge. He was also allowed to take coals from the stores, either for the purpose of working up his own materials in the dock-yard, or to dispose of to others. It is stated that he repaid the coals in kind, Ibid. Nos. 46, 72, 42, 43, 39, 116, 117.

Ibid. Nos. 30, 39, 116.

Ibid. Nos. 39, 30, 117.

but no account could be found of the quantity of coals he had sold or returned into store.

App. (E.) Nos. 42, 116.

There was no muster of the artificers or workmen on coming into the dock-yard. "The accounts of the men employed were invariably put in by the "engineer or storekeeper just as they pleased." It appears that one man, who had been absent in Scotland, was regularly entered in the engineer's books, as having been during that period daily employed in the dock-yard.

Ibid. Nos. 116, 16, 47.

Ibid. Nos. 116.

The whole of the artificers and labourers under the store-keeper received their wages from him at a public-house, kept by himself, in the town. The engineers and smiths received their wages from their foremen at different other ale-houses, instead of being paid at the agent's office or in the dock-yard. These foremen who paid them their wages kept the account of the time they were employed.

Ibid. Nos. 22, 34.

The stores were left in a most unsafe and unprotected state. No watch was kept during the night, nor was there any person belonging to the establishment who resided near the yard.

Ibid. Nos. 34, 23, 116, 117, 23, 26.

The timber was allowed to remain in an open field, without any brand or mark to distinguish it; and the number of keys which different people had of the dock-yard afforded access to the stores at all times. Great facility was thus given for the commission of fraud and speculation. Stores might have been charged against the different packets or colliers to almost any amount, without the possibility of detection; and the permission granted to the resident engineer and storekeeper to dispose of stores to private individuals afforded them the opportunity of selling those stores for their own advantage without exciting immediate suspicion of fraud on their part.

Ibid. No. 117.

22nd Report of Revenue Commissioners, p. 21.

In the Report of the Commissioners of Revenue Inquiry in 1830, it is remarked that "the whole duty of superintendence over all the parts of the establishment at Holyhead appears to have been hitherto confided to the packet agent, to whom, as has been already observed, it is intended to assign also the "direction of the newly formed 'engine department;' and besides these various "demands upon his attention, he is responsible for the proper Post Office duties, "as he holds likewise the situation of deputy-postmaster at Holyhead. The "competency of the same individual to discharge the whole of these duties "may be reasonably doubted."

The establishment has been, since the period of this Report, greatly enlarged, and the whole control of the packets, the dockyard, and stores, permitted to remain in the hands of the agent; who has, in addition to the duties of his own station, directed and superintended the repairs and alterations which have been made in the packets attached to the other stations.

App. (H.) No. 5.

On examining the chief clerk in the secretary's office, we were informed that the agent was the person responsible for the issue of stores, and the good management and regularity of the station; but, at Holyhead, Mr. Goddard stated that he "is not responsible for the issue of stores—for the receipt of stores—for the quality or price of stores—for the labour account—for the storekeeper's account—nor for anything connected with the engine department. There is not a single book kept in the dock-yard for the accuracy of which he can answer."

App (E.) No. 28.

Ibid. (E.) No. 55.

In the course of the inquiry at Holyhead, various instances were discovered, in which articles had been sold from the dock-yard by the resident engineer and storekeeper, and no account rendered to the Post Office of the produce of these sales. We found it necessary, in consequence of the communication which we received from our secretary of these frauds and other irregularities, to recommend to your Lordships that some trustworthy person might be immediately sent down to Holyhead to take charge of that establishment.

Mr. M'Knight, having been recommended by the Admiralty as a very efficient officer for this service, was directed by the Postmaster-General, in the first instance, to investigate in how far the cases affecting the resident engineer and storekeeper were to be attributed to fraud or to inaccuracy; when it appeared from his Report that he completely concurred in the conclusion to which we had come from the statement made to us, that there was no doubt as to frauds having been committed by both the officers in question.

App. (H.) No. 27.

We also directed Captain Evans and Mr. Gardiner to make a special report of the state in which they had found the Holyhead station, which we laid before your Lordships, and at the same time recommended that the resident engineer and storekeeper should be immediately discharged.

We have received a report of the survey of Mr. M'Knight, and now lay it before your Lordships, together with his evidence. App. (E.) No. 115.

It has been impossible to trace the extent to which peculation has been carried, but from the statements he gives, there is every reason to suppose it must have been considerable. He says, that "the accounts of the receipts and issues are so complicated as to afford no check on the remains in store; not one-half of the things that are in the establishment, being made any return of whatever." Ibid. No. 119.

Mr. M'Knight also states that he has clearly proved an overcharge of 1000 tons of coals a-year to the packets; but that with respect to the other stores, he could find, in many cases, no books or accounts showing what remained, and "that, although he found by his survey what actually remained, he could not tell what ought to have remained."

Since the report of Mr. M'Knight on the deficiency of coals at Holyhead, the agent has requested that the Postmaster-General will permit an allowance to appear in the accounts for waste, stating, as the ground for this application, "that it is a well-known fact that the wastage in this article, especially when it is exposed to the open air, is very great." Ibid. No. 106.

If this statement of the agent's was correct, it would in some measure account for the great overcharge in coals; but the practice universally adopted in the Admiralty Yards, and the opinion of private dealers prove that there is no waste in issuing coals, but that, on the contrary, the reasons assigned by Captain Bevis (the present agent) as producing waste, would rather have made a surplus in the measurement. Ibid. No. 117.

We have also received another communication from the late agent, accounting for the deficiency in coals, by supposing that the quantity had been calculated in the survey by a different measure from that by which they were delivered into store. It appears, however, from Mr. M'Knight's evidence, that he used the identical tubs or measures on the survey, which had been before used in the delivery of the coals into store, and did not make his calculations with reference to the cubic contents of either the Imperial or Winchester bushel. Ibid. No. 117.

The four colliers which have been kept at Holyhead have been attended with a very considerable expense, amounting to £10,802. 13s. 4½d. in the last five years. There is no check kept on the issue of stores for their repairs and maintenance. Ibid. No. 8.

The master and crews do not receive wages, but are paid 3s. 3d. for every ton of coals they deliver.

The system of keeping vessels for the conveyance of the coals appears to us very injudicious; as we have no doubt that they could be obtained at less expense by contract. We agree with the opinion expressed by the Commissioners of Revenue Inquiry, "that vessels retained for such purposes, whether employed or not, must require a superintendence quite foreign to the duties of the Post Office, which could only be properly exercised by distinct establishments, and that in the employment of them, much opportunity of abuse must be afforded." 22nd Report, p. 19.

With respect to the receipt and issue of oil, a large quantity of which is required for the packets, we find that irregularities have taken place, a full account of which will be found in the evidence appended to this Report. App. (E.) No. 116.

In establishing steamers on the Holyhead station, in 1822, the Post Office did not follow the recommendations at that time made by the most eminent engineers of the day, with respect to the power and class of vessels best suited for the service. Improvements have, from time to time, been made in the Holyhead packets, but they are deficient in power, and some of them, as appears from the statements of the commanders, inferior in other respects. The last new vessel, the *Gulnare*, which was built in one of the Admiralty yards, in point of strength and construction was superior to any of the other packets, but the power is not well proportioned to the tonnage of the vessel. App. (H.) No. 25.

The comfort and accommodation of passengers, which has been so much attended to in the construction of the Liverpool packets, in consequence of the opposition of the private companies, does not appear to have been sufficiently regarded at Holyhead. We find it stated in the evidence of one of the commanders, "that the accommodation at present is very inferior, especially for ladies,—very little attention has been paid to their comfort; and the Holyhead packets do not even carry a female steward, which every merchant vessel, carrying passengers, does." App. (E.) Nos. 63, 64, 65, 67, 68, and 69. Ibid. No. 66. App. (H.) No. 25. App. (E.) No. 113. Ibid.

App. (E.) No. 67. The stewards receive no salary, but expect a gratuity of 3*s.* 6*d.* from each passenger. On the Liverpool station, the steward's fee is included in the fares.

App. (H.) No. 25. We consider the practice of employing stewards without a salary, and requiring passengers to pay them, to be liable to much objection.

App. (E.) No. 111. It has been represented to us, in a Memorial which we have received, "that it would be a very great convenience to the public if an agent were appointed in Dublin for the Holyhead mail-packets, at whose office berths could be secured by passengers, and from whom the information necessary for travellers could be obtained." The Post Office have now an agent for the Liverpool packets in

App. (H.) No. 25. Dublin, and the interest which the commanders have in the receipts induces them also to take every pains to get passengers to go by their vessels. It might be well to appoint some person, with a small salary, to give the necessary information with respect to the Holyhead steamers.

We have considered whether it would be advisable to discontinue the morning packet between Holyhead and Kingstown, but are not prepared to propose to your Lordships any change which would render this station less efficient than it is at present. The day-mail from Kingstown to Holyhead ensures the arrival of all the correspondence from the interior of Ireland in time for the despatch to London by the mail of the following morning, whilst the Dublin correspondence, which is conveyed by the night packet, is delayed, in consequence of late arrivals, about twenty times a-year on an average. We should not, however, on this account, nor for the sake of the correspondence alone arriving by the Chester mail, deem it necessary to maintain a double line of packets from Holyhead to

App. (E.) Nos. 16
and 17.

Kingstown; but when we consider the large sums of money that have been expended on the Holyhead road and harbour, in order to improve the communication between this country and the seat of government in Ireland, we certainly hesitate to suggest to your Lordships a reduction in the establishment at Holyhead, which might prove a great inconvenience to passengers, without producing any corresponding reduction in the expenditure. We, therefore, recommend the continuance of the morning packet. We would, at the same time, call your Lordships' attention to the evidence of Sir Henry Parnell, relative to establishing a regular communication between London and Dublin every twelve hours. We have reason to suppose that such an arrangement might be effected without much expense, by means of one of the post-coaches.

App. (H.) No. 25.

We have received various returns connected with the Holyhead station, but, from the manner in which the accounts were kept, we fear they cannot be entirely depended upon. This observation, we regret to say, applies to many of the returns connected with the packet establishments.

App. (E.) No. 5.

From the statements of the receipts and expenditure since the establishment of steamers on the station, it would appear that up to the year 1826, when the Post Office established packets of their own at Liverpool, the receipts at Holyhead considerably exceeded the expenditure. From 1821 to 1827 the total receipts amounted to 99,604*l.* 13*s.* 10*d.*, and the expenditure to 69,494*l.* 3*s.* 7*d.*

Ibid. Nos. 4, 5.

From 1827 to 1836 the receipts have been 98,048*l.* 3*s.* 2*d.*—the expenditure 217,787*l.* 7*s.* 4*d.*—leaving a loss of 119,739*l.* 4*s.* 2*d.*

We have thought it right to insert two letters from Captain Goddard, the late agent at Holyhead, to Mr. Freeling,—although they do not appear to us to impugn, in any material respect, the animadversions which have been made on the manner in which that establishment was conducted.

LIVERPOOL.

THE Commissioners of Revenue Inquiry investigated all the circumstances which led to the establishment of Post Office packets at Liverpool. On referring to their Report, and taking into consideration the means which existed for the conveyance of the mails by private steamers, we have come to the conclusion that it would have been greatly to the interest of the revenue to have accepted the proposals made by the City of Dublin Company in 1826. The Company, at that time, were willing to undertake the conveyance of the mail from Liverpool to Dublin, leaving the remuneration for such service to the consideration of the Lords of the Treasury, should it merit any beyond the relaxation of certain harbour and light dues remitted to packets carrying the mails.

App. to 22nd Rep.
of Rev. Com. p. 200.

The expense of this station, since the year 1826, has exceeded the receipts by 59,088*l.* 4*s.* 4½*d.*; and the original cost of the four mail packets and the tender amounted to 77,803*l.* 12*s.* 10*d.* Allowing only 10 per cent. on this latter sum for interest of money and depreciation in value of the vessels, the total expense would average nearly 14,000*l.* a-year. App. (F.) No. 2.

It was impossible to make any investigation relative to the accounts at this station, as the books had been removed by Mr. Richardson, who was dismissed some months ago in consequence of having committed a series of frauds on the tradesmen employed for the supply of stores. The system appeared to have been extremely irregular. Mr. Richardson was employed in trade himself,—“ he had considerable business as a shipping agent, and at one time had two steamers of his own. Great part of the Post Office accounts were mixed up with his own private transactions.”

The Liverpool packets have greater power and are of a better class than any others belonging to the Post Office, and the accommodation for passengers is of the best description. Mr. Williams, the Chairman of the Dublin Steam Packet Company, states—“ Two of the packets are conceived by the public now to be inadequate, though at first they were not so; and that impression has arisen out of the change of public feeling as to the size and power requisite for packet vessels.” Ibid. No. 16.
 Captain Philipps and Captain Emerson, the commanders of these two packets, are “ decidedly of opinion that unless these two vessels are replaced by others of a superior class, the Post Office revenue must suffer greatly by any private Company placing packets on the line, which they have reason to expect is now contemplated. The average passage of the Etna and Comet is fourteen hours and twenty minutes; with superior vessels the passage would not average twelve hours.” Ibid. No. 14.

The receipts from the Post Office packets between Liverpool and Dublin must always be very precarious, in consequence of private Companies having powerful steamers on that line; and, as the private steamers depend principally on the freight, and not on passengers, they are enabled to oppose successfully the Post Office packets, by establishing a low rate of fares.

Mr. Freeling, with a view to prevent hostile competition, entered into an arrangement, on the part of the Post Office, with the City of Dublin Company in 1826. The terms of this arrangement are stated to have been, that “ the Company were not to lay themselves out for cabin passengers, but to consider their principal business to consist in the conveyance of merchandise, cattle, and deck passengers.” The Post Office agreed to confine their packets exclusively to the conveyance of cabin passengers, and to carry all proprietors of the City of Dublin Company free of expense. The Post Office seem to have adhered strictly to the terms imposed upon them, and, up to the 31st of October last, had conveyed 11,313 persons free of charge, as proprietors of the City of Dublin Company. The number of free passengers has been increasing every year, and considerably exceeded, in ten months of last year, the total number in any one of the former years. The terms on the part of the City of Dublin Company are not very definite; but, whatever may have been their precise import, the Company has, since the period when the arrangement was entered into, advertised for cabin passengers, and occasionally fixed their fares at about one-half what the Post Office charged. Ibid. No. 16.

This arrangement may have been advantageous to the revenue, and had the effect of preventing injurious competition; but we are of opinion that it is most objectionable that a public department should be placed in such a position as to render it necessary to enter into an agreement of this nature with private individuals.

The improvements in steam navigation, and the strong feeling of the public in favour of saving time, has led the private companies to increase the power of their engines: and all the new steam vessels that are at present building, are intended to have a much larger power than even twelve or eighteen months ago was thought advisable. The steam vessels at Liverpool now building for carrying goods will, in this respect, be very superior to the Post Office packets. Ibid. No. 17.

It becomes, therefore, necessary to consider whether it would be expedient on the part of the Government to build new vessels for the Liverpool station, or take advantage of the improvements which have been made, by entering into a contract with a private company. If sufficient notice was given of the intention of the Government to throw open any part of the packet service to contract, we have reason to believe that there would be a sufficient competition to ensure the

contract being taken on terms very advantageous to the Government, as compared with the present expensive establishment.

App. (F.) Nos. 12,
18, and 19.

We directed our secretary to make some inquiries on this subject at Liverpool and the Clyde; and refer to the communications made to him with respect to the conveyance of the mails from Liverpool; in one of which the manager of the City of Dublin Company says, "I would propose, for the purpose of avoiding the great expenditure on the present mail packet establishment which so far exceeds its receipts, and the object being to save the expense of maintaining that establishment in Liverpool, that this Company would undertake to work the present Post Office vessels, and perform the identical service now performed by them, and in an equally efficient manner, without any expense whatever to the Post Office, beyond that of their agents in Liverpool and Dublin. As, however, two of the present mail packets are of inferior power and efficiency, and it would be necessary to supply their places with others, so as to be equal to any rival vessels that might be brought on the station, this Company would undertake the mail service with two only of the packets now in use (the *Dolphin* and *Thetis*), supplying from their own fleet as many additional vessels as the service would require."

Ibid. No. 9.

Ibid. No. 12.

The commanders on this station have salaries of 400*l.* a-year, and an allowance of 2*s.* for each passenger they carry, "in accordance with a private agreement entered into with Mr. Freeling." It is stated, that from these allowances they find cabin attendance and keep up the stock of cabin stores. Their total income derived from the Post Office exceeds considerably that of the commanders on any other station, with the exception of Dover—in addition to which three of them receive half-pay as naval officers.

App. (A.) No. 9.

Your Lordships will, from the returns, observe that the salaries of the agents and commanders at the different stations vary greatly, nor do they appear to have been fixed with reference to the length of service, the rank of the officers, or the nature of the duty which they have to perform.

We do not, however, wish to make any suggestions to your Lordships with respect to the proper remuneration for the officers employed in the packet service, being of opinion that the whole establishment must be entirely remodelled, and that all the minor arrangements ought to be made under the directions of the Board of Admiralty.

PORTPATRICK.

App. (G.) No. 2.

There are only two packets attached to this station, and the total expenditure for the last four years has been 15,502*l.*, the receipts during the same period 6505*l.*

The stores are supplied and the accounts checked in the same irregular manner which we have had occasion to notice in our observations on several of the other establishments.

Ibid. No. 15.

The commander and officers of the packets are not held in any way responsible for the stores assigned to their vessels; they have no regulations with respect to the receipt or issue, and the agent "is of opinion that it would be most desirable to adopt the system pursued by the Admiralty, not only with respect to stores, but in all other matters connected with the maritime branch of the Post Office department."

Ibid. Nos. 11, 12,
13, 16, 17, 18, 19,
and 20.

We have received much evidence on the inconvenience alleged to be experienced in Portpatrick and Donaghadee as steam packet stations, and upon the propriety of transferring the Post Office establishment to other points, to which we beg to call your particular attention. We have already noticed this subject in a report to your Lordships, and are inclined to believe, especially from the testimony of the captains of the packets, that notwithstanding the great expenditure which has taken place on the present stations, it would be expedient to substitute others for them, and that it would be well worthy your Lordships' consideration whether Larne and Cairn Ryan could not at a small expense be rendered available for this purpose.

Having now brought under the consideration of your Lordships the general system upon which the Packet Department is conducted, as well as the present

state of the Establishments at the several stations, we shall proceed to suggest such alterations as appear to us best calculated to promote the efficiency of this branch of the public service, as well as to protect the interests of the Revenue.

After the statements which we have submitted to you, it is scarcely necessary for us to call your attention to the total inadequacy of the existing system to ensure efficient service, strict economy, and regularity of accounts. It must be obvious to your Lordships that the control exercised over the steam-packet establishment on the part of the General Post Office has been completely nugatory in all these respects. The evil consequences which have resulted at the different stations, from the absence of all proper superintendence, are detailed in the evidence which is before you, and in the analysis which we have made of it. They appear to us to offer a strong confirmation of the truth of the remark made by the Commissioners of Revenue Inquiry, that "there is a serious objection to the maintenance of establishments under the nominal sanction of His Majesty's Postmaster-General, which, persons who may be suitably employed in the duties properly belonging to the Post Office cannot be supposed to be well qualified to superintend." 22nd Report, p. 81.

After attentively considering the various modes which have, at different times, been suggested, in order to ensure the better performance of this service, we are of opinion, in the first place, that it should as much as possible be reduced in extent by contracting for its performance wherever it can be done on suitable conditions; and secondly, that the remainder should be placed under the management of the Board of Admiralty.

We are so convinced of the advantages which a system of contract must generally secure to the public over one of establishment, however well conducted, that we wish we could have felt justified in recommending that it should be universally and immediately adopted; but we are satisfied that, notwithstanding the great and rapid extension which has taken place in the private steam navigation of this country, it would not as yet be safe and expedient to throw open to competition at once all the six stations which are now maintained at the public expense. Although, therefore, we are not prepared to recommend at present the general adoption of a system of contract, we think that it may without delay be had recourse to partially with great advantage; and we offer this suggestion with the less hesitation because, while some packet establishments are still maintained, a sufficient check will always be in readiness in case the contractors should attempt to force the Government into an agreement disadvantageous to the public.

If your Lordships should be inclined to accede to this suggestion, we would point out Liverpool as a station where a contract could probably be obtained on satisfactory conditions.

We have stated that we advise your Lordships to propose to the Lords of the Admiralty to undertake the management of the steam-packet establishments; we conceive that the business and expenditure of the stations, the building, outfit, and maintenance of the vessels, the care of the stores, the appointment of the commanders, and the navigation of the packets, will be much better placed under the control of a department conversant with such subjects than under one which possesses no practical knowledge or experience in them; and we believe that such a transfer would be preferable both with respect to efficiency and economy, to an attempt to introduce into the General Post Office officers acquainted with dock-yards and steam-vessels, for the purpose of superintending this particular service. We trust that under this arrangement it may be found practicable to effect any considerable repairs, which the packets may require, in the King's naval yards, and that consequently the expensive establishment which is kept up for that purpose at Holyhead may be greatly reduced, if not altogether abandoned.

It is obvious that if the alteration of system which we have proposed is carried into effect, it will nevertheless be necessary that the steam-packets should, in certain respects, be under the control of the Post Office. This Department must have the discretionary power of regulating the hours of departure, and must be authorized to receive the reports of the agent whenever the mail may have been delayed.

Although this divided control may appear to be liable to objection, yet we believe that it need occasion no practical inconvenience; but that regulations may, without difficulty, be framed which will enable the two departments to act together in promoting the efficiency of the service.

We have taken great pains to ascertain what description of vessels would generally be best adapted to the service of the Post Office. Your Lordships will find in the evidence much valuable information on this point. The concurrent testimony of almost all the practical men whom we have examined, induces us to recommend the use of a larger class of vessel and a greater power of machinery in proportion to the tonnage, at every station, not only as a means of ensuring the greater efficiency and regularity of the Service, but because we are satisfied that the example of private companies in this respect is in itself a sufficient guarantee of the ultimate economy of such improvements.

App. (H.) No. 25.

It has been stated to us that much inconvenience has been felt by the public from their not knowing the time fixed for the departure of the Post Office packets, and that when persons are at a distance from the station, this information is with difficulty procured. Private companies usually make their hours of departure known by means of advertisements, but the Post Office has a great advantage in this respect, since it possesses in every town and many villages a house where, without any additional expense, this information might be deposited for the convenience of the public.

With regard to the passage fares at the different stations, wherever the service is conducted by a public establishment, we would recommend that the rates should be fixed by the Post Office with the concurrence of the Treasury, and that no fees of any kind, in addition to the sum so fixed should be allowed to be received. We are also of opinion that the salaries of the officers of the packet service ought to be revised by the Lords of the Admiralty, and that these charges, as well as the rest of the expenditure incurred by them for the Post Office, should be annually submitted to Parliament in the Navy Estimates.

Your Lordships will find in the Appendix a Letter addressed by Mr. Freeling to the Postmaster-General, and communicated to us, on the subject of the Holyhead station, as well as a reply by Mr. Gardiner and Captain Evans to some animadversions which it contains on their Report. We think it unnecessary to make any other observation on the statement of Mr. Freeling, except to say, that we feel persuaded that your Lordships will find in it the strongest confirmation of the opinion we have expressed of the total inadequacy of the existing system of control over the steam-packet establishments on the part of the Post Office, and of the evils which must be expected to result from accumulating in the Secretary's office such a variety of incongruous duties and powers.

We desire, in conclusion, to state to your Lordships that if the steam-packet department is transferred to the Admiralty, and you are disposed to act upon the recommendation we made in a previous Report, to substitute a Board of Commissioners for the office of Postmaster-General, we are of opinion that three Commissioners will be sufficient to execute the duties which will devolve upon them.

Office of Woods, April 30, 1836.

DUNCANNON.
H. LABOUCHERE.
SEYMOUR.

LIST OF APPENDIX

To the Sixth Report of the Commissioners appointed to inquire into the Management of the Post-office Department.

APPENDIX (A.)—General Returns.

Appendix (A.)

- No. 1. A Return of the Total Receipts and Expenditure of the Packet Stations from 5th January 1832 to 5th January 1836.
- No. 2. A Return of the Prime Cost and Outfit of all Vessels in the Employment of the Post-office.
- No. 3. A Return of the Number of Vessels propelled by Steam that have been employed, and that are now employed, or building, or repairing, under the orders of the Post-office, specifying the Service in which they have been engaged, the Tonnage, and Horse-power of each.
- No. 4. A Statement of the Amount paid for Repairs of all Vessels in the Employment of the Post-office during each of the last Four Years, so far as the same can be made out from the Books of the Accountant General.
- No. 5. An Account for each Station, showing the Salaries of each Commander, Mate, and Engineer of a Steam Vessel, and also the Fees or other Allowances received by them.
- No. 6. A Statement of the Names, Salaries, and Allowances of the Post-office Packet Agents in the United Kingdom, and in Places Abroad, in the Year 1834: also, a Statement of the Names, Salaries, and Allowances of Postmasters in Places Abroad in the Year 1834.
- No. 7. A Return of the Superannuation, or Retired Allowances, already granted to Persons who have been employed in the Packet Service as they stood on the 5th of January 1835.
- No. 8. A Return specifying the principal Heads of Expenditure of the Sum of £114,267. 12s. 8d. stated to be the Expense of the Packet Service for the Year ended 5th January 1834.
- No. 9. A Return of the Names of the Commanders of the Post-office Packets, the Dates of their Entry into, and their Rank or Seniority in the Post-office Service, the capacity in which they were first employed, their Rank (if any) in the Navy, and their Total Amount of Pay and Emoluments in each Year from 5th January 1831 to 5th January 1835.

APPENDIX (B.)—Dovor.

Appendix (B.)

- No. 1. Return of the Number of Persons employed, the Amount of Pay and Emoluments of each, and a Description of the Duties which they perform.
- No. 2. Return of the Prime Cost and Outfit of the Post-office Packets on the Dovor Station, and the Amount paid for Repairs of the Packets on that Station during each of the last Three Years.
- No. 3. Return of the Tonnage, Dimensions, Power, &c. of His Majesty's Packets on the Dovor Station.
- No. 4. An Account of Voyages by His Majesty's Packet Crusader, from 1st January to 16th September 1835.
- No. 5. An Account of Voyages of the Firefly from 1st January to 16th September 1835.
- No. 6. An Account of Voyages of the Ferret from 1st January to 16th September 1835.
- No. 7. Return of the Number of Passengers, Horses, Carriages, &c. conveyed by His Majesty's Steam Packets between Dovor and Calais, and Dovor and Ostend, in each of the last Four Years.
- No. 8. Return of Fares charged by His Majesty's Packets between Dovor and Calais, and Dovor and Ostend.
- No. 9. An Account of the Number of Tons of Coal consumed by each Steamer on the Dovor Station during the last Three Years: and an Account of the Quantity of Coal purchased by the Agents at Dovor, Calais, Ostend, &c., and the average Price paid.
- No. 10. Statement of Gratian Hart, Esq.
- No. 11. „ Captain Hamilton.
- No. 12. „ Mr. Norwood.
- No. 13. „ „ Lyne.
- No. 14. „ „ Smithett.
- No. 15. Letter „ „
- No. 16. Statement of Captain Sherlock.
- No. 17. „ „ Mudge.
- No. 18. „ Mr. Selater.
- No. 19. „ „ Hare.
- No. 20. „ „ Knight.
- No. 21. „ „ Brayley.
- No. 22. „ „ Llanlis.
- No. 23. „ Messrs. Ismay and Wood.

- No. 24. Extract from Statement received from Captain Le Gros.
- No. 25. Letter of Monsieur Benard.
- No. 26. Statement of Mr. Cass.
- No. 27. ,, Monsieur Doussaint.
- No. 28. Copy, Treaty dated 14th June 1833, for the Conveyance of Letters between England and France.
- No. 29. Copy, Treaty dated 17th October 1834, for the Conveyance of Letters between Great Britain and Belgium.

Appendix (C.)

APPENDIX (C).—Weymouth.

- No. 1. Return of the Number of Persons employed on the Weymouth Station, Amount of Pay and Emoluments, and Description of Duties which they perform.
- No. 2. Return in detail of the Draught, Tonnage, Measurement, and Particulars of every Part of the Steam-Packets, Flamer, Watersprite, and Ivanhoe.
- No. 3. Return showing the Expenses of the Ivanhoe from 5th April 1833 to 5th January 1835.
- No. 4. ,, Flamer ,, ,,
- No. 5. ,, Watersprite ,, ,,
- No. 6. Return of the Number of Passengers, &c. &c. conveyed between Weymouth and Guernsey and Jersey in the Years 1832, 1833, 1834, and 1835.
- No. 7. Table of Fares now charged for Conveyance of Passengers, &c. &c.
- No. 8. Statement of Captain Stevens, dated 28th September 1835.
- No. 9. ,, ,, 1st October ,,
- No. 10. ,, Captain White.
- No. 11. ,, ,, Living.
- No. 12. ,, Messrs. Roberts and Vivian.
- No. 13. ,, Messrs. Witham and Pearman.
- No. 14. Letter from Mr. Harvey, Postmaster of Weymouth, to Mr. Gardiner.
- No. 15. ,, Mr. Elliot to Mr. Gardiner.
- No. 16. ,, Mr. Scott ,,
- No. 17. ,, Captain Living, with Statement of G. W. Le Geyt, Esq., Postmaster, Jersey.
- No. 18. Statement of G. W. Le Geyt, Esq.
- No. 19. Letter from Captain Stevens, to J. R. Gardiner, Esq., dated 11th March 1836.
- No. 20. ,, ,, ,, 14th March 1836.
- No. 21. ,, ,, ,, 4th February 1836, with Letter from the Widow of the late Agent.
- No. 22. Letter of Mr. De Buck, Secretary to the British and Foreign Steam-Navigation Company, dated 21st January 1836.
- No. 23. ,, ,, dated 23d February.

Appendix (D.)

APPENDIX (D).—Milford.

- No. 1. A List of the Persons employed in the Post-office Establishment at Milford.
- No. 2. An Account of the Receipt and Expenditure of the Milford Station for Four Years ended 5th January 1835.
- No. 3. Return of the Prime Cost and Outfit of the Post-office Packets on the Milford Station, and the Amount paid for Repairs of the Packets on that Station during each of the last Three Years.
- No. 4. Return of the Draught of Water, Tonnage, Power, Dimensions, &c., of the Steam Packets on this Station.
- No. 5. Return of the Number of Passengers, Horses, Carriages, &c., conveyed by His Majesty's Steam Packets between Milford and Dunmore in each of the last Four Years.
- No. 6. A Table of Fares now charged at the Milford Station.
- No. 7. A List of the Towns in Ireland, the Correspondence for which is sent by the Post-office *viâ* Holyhead, if not otherwise directed, although the Distance would be shorter by Waterford; the Difference of Distance between the two Routes of Holyhead and Waterford; and the Increase of Postage in consequence of the Correspondence being sent by Holyhead.
- No. 8. A List of the Towns in Ireland for which Letters from London, if not directed by any other Route, are transmitted *viâ* Waterford.
- No. 9. Statement of Captain Bevis.
- No. 10. ,, ,, Hallands.
- No. 11. ,, ,, Roberts.
- No. 12. ,, ,, Hammond, dated 14th October 1835.
- No. 13. ,, ,, ,, 17th ,,
- No. 14. ,, Mr. Davies.
- No. 15. ,, ,, Devereux.
- No. 16. Letter from Captain Chappell to Captain Evans and Mr. Gardiner.
- No. 17. ,, ,, George Evans to Lord Duncannon, with Report on Waterford River.
- No. 18. Report of Captain George Evans on Waterford River.
- No. 19. ,, ,, on Messrs. Carter and St. Leger's Chart of Waterford River.
- No. 20. Resolutions of the Chamber of Commerce of Waterford.
- No. 21. ,, Harbour Commissioners of Waterford.
- No. 22. ,, Chamber of Commerce of Limerick.

- No. 23. Letter from Mr. Parsons, Postmaster, Waterford, to Mr. Gardiner.
- No. 24. Statement of Mr. M'Namara, Postmaster, Limerick.
- No. 25. Letter from the Postmaster-General to the Treasury, with Captain Chappell's Report.
- No. 26. ,, ,, ,, Post-office Commissioners, with Copy of ditto.
- No. 27. Report of Captain Chappell on Dunmore Harbour.
- No. 28. Letter from Captain W. Evans, Commander of His Majesty's Packet Vixen, dated 12th February 1836.
- No. 29. Letter from Captain W. Evans, dated 3d April 1836.
- No. 30. ,, ,, Bailey to Captain W. D. Evans.
- No. 31. ,, ,, W. Evans, dated 8th April 1836 to Captain George Evans, R.N.
- No. 32. Captain George Evans's Reply to Captain Chappell's Report.

APPENDIX (E).—Holyhead.

Appendix (E.)

- No. 1. The Number and Names of all Persons employed at Sea on the Holyhead Packet Establishment, with their Salaries and Allowances.
- No. 2. Ditto on Shore.
- No. 3. The Prime Cost and Outfit of the Vessels employed by the Post-office on the Holyhead Station.
- No. 4. Account of the Receipts and Expenditure of the Holyhead Station during the Years 1821 to 1831, inclusive.
- No. 5. Ditto, during the Years 1832, 1833, 1834, and 1835.
- No. 6. All Vessels attached to the Holyhead Station, and not now employed in the Conveyance of the Mails.
- No. 7. Account of the Expenditure of all Vessels on the Holyhead Station (exclusive of the Mail Steamers) from 5th January 1831 to 1st February 1836.
- No. 8. Expense of the Colliers at Holyhead for the Years 1831, 1832, 1833, 1834, and 1835.
- No. 9. The Draught of Water, Length, Breadth, &c. &c., of His Majesty's Packets on the Holyhead Station.
- No. 10. The Number of Passengers, Horses, &c., conveyed by Post-office Steam-Packets between Holyhead and Dublin in each of the last Four Years.
- No. 11. Ditto from 10th October 1832 to 10th October 1835; and the Number of Tons of Coals consumed by each Steam-Packet on the Holyhead Station during the same period.
- No. 12. A Table of Fares for Passengers, Horses, Carriages, &c.
- No. 13. Amount of Passage Money received on board the Packets on the Holyhead Station in 1831, 1832, 1833, and 1834.
- No. 14. Receipts for Freight of Parcels in 1831, 1832, 1833, and 1834.
- No. 15. Number and Names of Packet Wherry-men, their Pay and Emoluments, and Nature of their Employment.
- No. 16. The Days on which the Packets did not arrive in time for the London Mail in the Years 1831, 1832, 1833, 1834, and 1835.
- No. 17. Return of the Arrival of the Packets from Kingstown too late for the Dispatch from Holyhead by the Morning Mail in 1834 and 1835.
- No. 18. Account of Expenses for Repairs of Vessels at Holyhead, not belonging to that Station, from 5th January 1831 to 5th January 1835.
- No. 19. The Names of all Vessels under Repair at Holyhead from 5th January 1831 to the present time, with the Nature of the Repairs done, &c.; and the Expenses incurred for the Repairs of the Vixen during the period she has been in the Post-office Service.
- No. 20. Rates of Freightage of Stores from Liverpool.

* These allowances are in compensation for the loss of their profits on the abolition of sailing packets on the Dover station, and will not be continued to their successors.
 † Redundant commanders on the Harwich station.
 ‡ From these allowances, which are at the rate of 2s. for each cabin passenger, the commanders on the Liverpool station find cabin attendance, and keep up the stock of cabin stores.

General Post-office,
12th February 1836

F. FREELING,
Secretary.

Tonnage, Dimensions, Power, &c., of His Majesty's Packets on the Dovor Station.

No. 3.

RETURN of the Tonnage, Dimensions, Power, &c., of His Majesty's Packets on the Dovor Station, 22d December 1835.

HIS MAJESTY'S PACKET "FERRET."

Draught of water, with the full complement of fuel and passengers on board, forward 6 ft. 5 in., abaft 6 ft. 7 in.
 Tonnage, 132 $\frac{3}{4}$.
 Length, from the fore part of the stern to the after part of the stern post, 107 ft. 6 in.
 Breadth, extreme, 15 ft. 11 $\frac{1}{2}$ in.
 Depth, 9 ft. 9 in.
 Two engines of 25 horse-power each.
 Diameter of cylinder, 30 $\frac{1}{2}$ in.
 Stroke of cylinder, 2 ft. 6 in.
 Diameter of air pump, 13 $\frac{1}{2}$ in.
 Stroke of air pump, 14 $\frac{1}{2}$ in.
 Surface of the boiler exposed to the fire, cubic contents of the boiler—refers you to Messrs. Bolton and Watt.
 Pressure on the safety valves when at full work, 4 lbs. to the square inch.
 No alteration whatever made to the slides.
 Diameter of wheel, 12 ft. 2 in.
 Ten floats on each wheel, 5 ft. 3 in. long by 18 in. broad.
 Inclination of paddle arms perpendicular from the centre of the shaft.
 Revolution of engines, when loaded, work from 33 in a calm, down to 18 and 20 blowing hard wind a-head.
 Wheel immersed when loaded, 23 in.

J. HAMILTON.

HIS MAJESTY'S STEAM PACKET "CRUSADER."

Draught of water, when with complement of fuel and passengers, forward 6 ft. 10 in., abaft 7 ft.
 Tonnage, 112 $\frac{3}{4}$.
 Power, 50 horse.
 Length, 90 ft. 4 in.
 Breadth of beam, 16 ft. 2 in.
 Depth in the hold, 9 ft. 11 $\frac{1}{2}$ in.
 Size of the cylinder, 2 ft. 5 $\frac{1}{2}$ in.
 Size of the air pump, 1 ft. 6 $\frac{1}{2}$ in.
 Length of stroke, 3 ft.
 Surface of the boiler exposed to the fire.
 Cubic contents of the boiler.
 Pressure on safety valves, when at full work, 3 $\frac{1}{2}$ lbs. to the square inch.
 Alterations in the slides (none).
 Extreme diameter of the wheel, 12 ft.
 Paddles taken up 5 inches, working at 11 ft. 7 in.
 Number of floats 12, 5 ft. by 18 in.
 Inclination of paddle arms to the centre of the shaft.
 Greatest number of revolutions of the wheel, when loaded, fine weather 32 in n., with sail and a fresh breeze 34 in n.
 Proportion of the wheel immersed, when loaded, 2 ft. 7 in.

HIS MAJESTY'S PACKET "FIREFLY."

Draught of water, when with full complement of fuel and passengers, abaft 6 ft. 2 in., forward 6 ft. 6 in.
 Tonnage, 116 $\frac{3}{4}$.
 Power, 2 engines 25-horse power each.
 Length, 94 ft. aloft.
 Breadth of beam, 16 ft. 1 in.
 Depth, 9 ft. 7 $\frac{1}{2}$ in.
 Size of cylinder and stroke, diameter 30 $\frac{1}{2}$ in., stroke 2 ft. 6 in.
 Size of air pump and stroke, diameter 15 in., stroke 1 ft. 3 in.
 Surface of the boiler exposed to the fire.
 Cubic contents of the boiler.
 Pressure on the safety valves, when at full work, 3 $\frac{1}{2}$ lbs. per square inch.
 Alterations (if any) made in the slides, in consequence of using more highly elastic steam; none, the engines being worked at low pressure.
 Diameter of paddle wheels, 16 ft. 2 in.
 Number of floats and size, 10 floats 5 ft. 3 in. long, 1 ft. 4 in. broad.
 Inclination of the paddle arms to the centre of the shaft; none, the paddle arms being placed from the centre of the shaft.
 Greatest number of revolutions of the wheel, when loaded, 32 revolutions per minute.
 Proportion of the wheel immersed, when loaded, 22 in.

R. SHERLOCK.

RETURN of the Tonnage, Dimensions, Power, &c., of His Majesty's Packets on the Dover Station—
(continued.)

No. 3

Tonnage, Dimensions, Power, &c.—
(continued.)

HIS MAJESTY'S PACKET "SALAMANDER."

Draught of water, abaft 6 ft. 11½ in., forward 6 ft. 8½ in.
 Tonnage, 111¼, exclusive of engine-room, 62¼.
 Power, two 25 horse-engines.
 Length, 90 ft. 2½ in.
 Breadth, 16 ft. 2 in.
 Depth, 9 ft. 11½ in.
 Size of cylinder, 29½ in.
 Size of air pump, 19¼ in.
 Length of stroke, 3 ft.
 Surface of boiler exposed to the fire.*
 Cubic contents of the boiler.*
 Pressure on the safety valves, when at full work, 4½ lbs. on the inch, remain as fitted by Bolton and Watt in 1833.
 Alteration of slides (none).
 Extreme diameter of wheels 12 ft., worked at present by the engines, 11 ft. 4 in.
 Number of floats, 12.
 Size of floats, 5 ft. in length, 20 in. in breadth.
 Inclination of paddle arms to centre of shaft.*
 Revolution of wheels in still weather 33 to 34, with a free wind, fresh breeze, and all sails set up, to 37 and 38.
 Proportion of the wheels immersed when loaded, 25½ in.

HIS MAJESTY'S PACKET "ARROW."

Length from fore part of stern to after part of stern post, 107 ft. 6 in.
 Breadth of beam, 17 ft.
 Depth, 10 ft. 3 in.
 Tonnage, 149¼.
 Draught of water, with full complement of fuel, passengers, &c., on board, forward 6 ft. 7 in., abaft 6 ft. 4 in.
 Two engines of 30-horse power each.
 Diameter of the cylinders, 2 ft. 7¼ in.
 Length of stroke to cylinders, 3 ft.
 Diameter of the air pumps, 1 ft. 5½ in.
 Length of stroke to air pumps, 1 ft. 6 in.
 Diameter of the paddle wheels, 13 ft.
 Ten paddles on each wheel, 5 ft. 2 in. long by 18 in. broad.
 Wheels immersed when loaded, 1 ft. 10 in.
 Number of revolutions per minute, when at full work, and loaded all complete, 32 in a calm, down to 20 in a gale.
 Pressure on the safety valve, 4 lbs. on the square inch.
 The engines are working at low pressure.
 No alterations have been made in the slide valves.
 The paddle arms are perpendicular from the centre of shaft.
 For the cubic contents of the boilers, and surface of boilers exposed to the fire, I must beg to refer you to Messrs. Bolton, Watt, and Co.

Dover,
22d December 1835.

LUKE SMITHETT,
Commander.

* These questions must be answered by a practical engineer.

F. FREELING, Secretary.

No. 10.

DOVOR STATION.

Mr. Hart, Packet Agent.

No. 10.

Statement of
Gratian Hart, Esq.

No part of the stores supplied to the packets on this station are contracted for, with the exception of the coals which are supplied by a person in London under a contract with the Postmaster-General. This contractor is paid by the agent here. There have been only two instances during the time Mr. Hart has been on the Dovor station, of coals being paid for by the Postmaster-General's warrant; that has been for two bills during the present year, which were paid in March last: one bill amounted to £165. 12s., another to £259. 18s.

The coals have been supplied by the same person, during all the time Mr. Hart has been agent, and for many years previous. The present price is 23s. a ton, which includes all expense of laying them into the store at Dovor. The expense of putting them on board the packets is paid for by Mr. Hart, at the rate of 1s. 6d. per load of 18 cwt.

The crews of the packets were formerly employed to fill the sacks when off active duty, and 1s. a load for carting from the store to the packets was then paid; but when the packets sailed daily to Calais, and four times a-week to Ostend, finding that it was impossible for the crews of the packets to continue this extra task, on the 16th September 1833, Mr. Hart recommended to the Board to advance the allowance from 1s. to 1s. 6d. a load, to pay the ladder-men to fill the sacks, in conjunction with the carter, and deliver the coals on board the packets. The coals were some time ago contracted for at the rate of 25s. a ton, but a new contract was made in the year 1833, at 23s. They are supplied with great regularity by the contractors, Messrs. Pegg, of London. They formerly had an agent here, a Mr. Peake, who attended to the store, and informed them when any supply was wanted. This is now done by Mr. Brayley, the person employed by the agent to superintend the issue of coals. In case of the coals running short through the non-arrival of the contractor's vessels from stress of weather, coals are purchased here. This was attended to by Mr. Peake, when Messrs. Pegg's agent, but he having frequently supplied coals of an inferior quality was objected to by Mr. Hart, and now any extra coals which may be required are purchased by Mr. Brayley, the puyer and superintendent of stores. Mr. Brayley is paid by the contractor whatever the price may be at Dovor. All the coals, however, whether purchased here or sent from London, are delivered into store at the contract price. Mr. Brayley is allowed by the contractors a small gratuity for his trouble. The quantity of coals delivered into store is notified to the agent by the clerk of the collector of customs, delivering to him the receipt for the duties. There is no other check of the quantity delivered than the accounts of the meter employed by the Custom-house.

Mr. Hart conceived that a stronger check on the correct delivery of the proper quantity of coals delivered into the store could not be enforced than by the superintendence of the coal-meter or king's officer, who regulated the amount of duty to be paid, by the actual quantity delivered into the store, and the contractors were paid for the quantity of coals thus ascertained to be deposited in the coal store. Mr. Hart does not see them delivered, nor Mr. Brayley, whom he employs as storekeeper. Any requisition for coals for the packets is made to Mr. Brayley; they are issued by him in the manner stated in his report, which Mr. Hart has seen. No account is given by any person on board the packets of the quantity of coals they receive.

The account of the number of loads of coal received from the store and delivered on board each separate packet the six days preceding, is regularly sent to the agent every Monday, who then pays the 1s. 6d. a-load, delivered according to the last agreement. The accounts of coal received into store, and thus delivered to the packets have never, to the agent's knowledge, so far disagreed as to occasion the smallest suspicion of any depredation.

The only means Mr. Hart has of ascertaining the quantity delivered to each vessel, is from the carter's account for conveying them on board. This account is delivered every Monday morning. The issues of coals are entered in a memorandum book from these accounts. The accounts of the receipt and issue of coals is transmitted to the Post-office monthly, and the quantity remaining in store is ascertained by deducting the issue from the receipts, no measurement ever being made.

The manner of providing oil, tallow, hemp, and other small stores, is by purchase from different tradesmen, who charge the current prices for whatever they supply. No order is given by the captain for these stores. The mate generally orders and receives whatever is necessary. The tradesman inserts in a book kept by the mate, the quantity of stores which he supplies to the engineer, or any of the crew who may be sent for these stores; a separate book is kept by the mate of each vessel. These books kept by the mates are not sent to the agent to be compared with the charges made in the tradesmen's bills. The bills are sent in quarterly to the agent's clerk, separate bills for each vessel. Immediately on receiving these bills, they are paid by the agent, and the only check which he has, is his dependence upon the honour of the tradesman, not to charge for more than has been actually delivered. No person signs these bills, nor are they in any way certified by the Captains or other officers of the packets. The vouchers are sent up every month to be examined by the accountant-general at the Post-office, and an abstract of the accounts is transmitted quarterly, signed and certified by the agent.

Mr. Hart believes that an account of the stores received on board the vessels is kept by the mates. These accounts are neither transmitted to the agent nor to the Post-office. The

No. 10.
Statement of
Gratian Hart, Esq.

Captains of the vessels are at liberty to choose their own tradesmen, with the consent of the agent. Mr. Hart, however, never interferes, except when he thinks he can get a lower price in cases where masts, spars, and sails, or other large stores are required. Small stores, such as oil, tallow, &c., are always purchased from the same persons by the Captains or mates.

The agent has no authority to make any purchase or to order any repair or painting without first ascertaining the expense from different tradesmen, and then reporting the lowest charge to the Board, and requesting authority for the purchase, painting, or repair. The mates are in general natives of Dovor.

At Calais, whatever coals or stores are necessary, are purchased by the mates, who, on producing their bills to the agent at Dovor, are immediately paid. The captain is in no way responsible for these stores; he gives no order to the mates to purchase them, and the agent considers the mates alone responsible. With the exception of oil, the stores bought at Calais are small in amount. The oil is generally got there, as the price is less and the quality better. The coals required at Calais are purchased by the mate; the present price is 33*s.* 10*d.* a-ton. They are of very inferior quality, and injure the boilers and bars.

At Calais there is no packet agent; the only person employed by the Post-office there, is a plover, who receives 100 francs a month. The mails are carried on shore and delivered at the Post-office by the mailman, who also has the charge of the despatches, which he conveys to the consul. There is an agent at Ostend who pays in the first instance for stores supplied to the packets there, and transmits the bills to the agent at Dovor, who remits the amount quarterly by one of the captains. The Ostend accounts are examined by the agent at Dovor, to see if they correspond with the vouchers.

The present scale of fares for passengers by the Post-office packets was fixed by the Postmaster-General about two years ago. The agent has no power to alter these rates nor to allow a free passage without the authority of the Postmaster-General.

The captain has no authority whatever with respect to the rates, nor does he at all control the receipts, further than signing the daily bill when presented to him.

The mate keeps the account of the receipts. He is the responsible person, and there is no check beyond the daily bill delivered to the agent, and which is by him transmitted to the Post-office.

April 10, 1805.

Mr. Hart was appointed agent of packets at the station at Husum, where he received the mails from England for Hamburg and Bremen, the despatches from the royal family for the Hanoverian Government, and many from the Secretary of State's Office, for the ambassadors residing at the different foreign courts, from whom he also received despatches for England, brought to Husum by the king's messengers, who either left those despatches in the hands of the agent, or went with them in the packet-boats to England; the mails for England were delivered to Mr. Hart, to be forwarded as the packet-boats sailed in turn for England.

Mr. Hart occasionally shifted from place to place, as Cuxhaven, Husum, and Tonninghen, as the approach of the French threatened danger to the English correspondence; these removals took place at all seasons of the year, as the enemy advanced, and were attended by great personal inconvenience and occasional loss of property; the communication was kept open between Denmark and England to the last moment it could be done with safety to the correspondence; when the Danes threatening to seize the mails, the agent, and lastly, the packet-boats, Mr. Hart took his final departure for England, after about two years and a half's residence as agent on the Continent.

During the Walcheren expedition, Mr. Hart was ordered to Flushing with some thousands of letters for the army, but from circumstances, the delivery of them, to any extent, was impossible.

Aug. 11, 1808.

The English packet-boats being ordered to touch at Madeira on their passage out to the Brazils, and also on their return from the Brazils to England, Mr. Hart was appointed agent at Madeira, to receive the correspondence for that island, for the factory, and the governor and garrison; he did not remain at Madeira many months, the deputy consul being entrusted with this duty.

Nov. 1809.

Mr. Hart received the appointment of agent of packets at Lisbon, and received the mails from England, and the letters for the numerous garrison then there, and returned the bags of letters collected at Lisbon against the departure of the English packets. Mr. Hart remained at Lisbon but a few months.

April 1810.

Mr. Hart was made a riding-surveyor, and performed the duty of that department some years in the manufacturing districts of Lancashire and part of Yorkshire, when the correspondence of the manufacturers was most flourishing and productive. Mr. Hart continued a surveyor until January 1832, when he became agent of packets at Dovor, as travelling, under the circumstances of his health, became painful and dangerous; the duties of agent at that time were comparatively small, and Mr. Hart was thought competent to them, without the assistance of a clerk, who was not allowed; but when the mails for France were sent daily, and the mails to Ostend sent four times a-week instead of twice, despatched at very early hours in the morning, the duty became very severe and responsible.

Dovor, September 12, 1835.

Statement of
Captain Hamilton.

Captain Hamilton, Commander of the "Ferret,"

Has been commander of a Post-office packet since 1803. Was appointed to the Harwich station and remained there until 1814, when he was removed to Dovor, where he has continued ever since. Before the introduction of steamers into the Post-office service, Captain Hamilton was consulted by the Board, and was employed to superintend their building and outfit. Of late, great improvements have been made in the Post-office steamers; but upon this station the power of the engines is not in any of the packets what it ought to be. The consequence is, that their speed does not come up to that of one of the French Post-office steamers, nor to some of the private vessels. The "Ferret" has recently been lengthened 12 feet, by the recommendation of Captain Hamilton, at an expense of £480. Since this alteration she goes much faster under sail, much easier, and is a better sea boat in every way. When the "Ferret" was lengthened she ought to have had engines of 35-horse power, or at least 30, put in. At present her engines are only 25-horse power each.

Captain Hamilton entirely agrees with Captain Smithett, that the "Arrow" and "Ferret" are vessels of the very best description for the Dovor station, provided they had increased power. He would recommend that the other three vessels, *viz.*, the "Crusader," "Salamander," and "Firefly," should be similarly lengthened, and that each vessel should be fitted with two engines of 35-horse power.

A striking instance of this want of power was exhibited on Thursday last. The French mail boat, the "Courier," which left Calais half an hour after the "Ferret," in blowing weather, arrived half an hour before the "Ferret," at Dovor, which enabled the French packet-boat to save the tide and get into harbour, while Captain Hamilton was obliged to remain outside and land his passengers at very great risk in the bay.

Captain Hamilton does not consider himself responsible for the stores on board, but thinks it right to see that every possible economy is used in the consumption. With respect to the prices charged by the tradesmen, he conceives that it is not his duty to exercise any control, nor could he do so, as he is never aware of what the prices are. Formerly, when Sir Thomas Mansel was agent, Captain Hamilton had the whole management of the supply of stores. Sir Thomas Mansel not being a seaman, never interfered, and referred to Captain Hamilton in every case when anything was required by the commanders of the other vessels. Since the new arrangement with France for carrying a mail daily, the receipts of the Post-office packets have greatly diminished, and the expenditure is very much increased, owing to the early hour of departure from Dovor.

In 1833, according to a calculation made by Captain Hamilton, the receipts of the "Ferret" were £4,327. 12s. 7d., while the expenditure for repairs at Dovor, stores, &c., amounted to only £1,462. 18s.

In this calculation the coals are estimated at £1 a ton,* which he thinks would have been the price charged for the best coals by a coal-merchant at Dovor. No coals are ever supplied by merchants at Dovor, but are contracted for in London. Whatever small stores are required at Calais, are purchased by the mate, who is paid the amount of the bills by Mr. Hart. The private companies receive all their stores from London, and Captain Hamilton thinks that the Post-office should adopt the same plan.

Captain Hamilton thinks there would not be the least use in employing an agent at Calais, nor is he, as a captain of a packet, at all aware of the duties which the agent performs at Ostend, with the exception of receiving the Ambassador's bag, which is done at Calais by the Consul, and paying some tradesmen's bills, having previously had money remitted from the agent at Dovor. Thinks that there should be more regularity with respect to the issue of stores, and a regular storekeeper to superintend the delivery of them; and regular entries should be made of receipts and issues.

Calais, September 17, 1835.

He begs to illustrate the disadvantages arising from the class of vessels now in use, by what occurred at Calais to-day. The "Firefly" left Calais between six and seven o'clock this morning, with very few passengers on board. Had the vessel been of sufficient power, she might have waited for the afternoon tide, having no mails or dispatches to carry over, and taken a freight of passengers and carriages which the French vessel got. The reason for starting thus early without waiting for the passengers was, that, from the inferiority of the vessel, the captain could not rely with certainty upon making his passage to Dovor if he waited for the afternoon tide. Had the vessel been of the class and power recommended by Captain Hamilton, he would have had no hesitation in waiting. With the "Ferret," which he commands, he would have been obliged to do the same thing from want of power in the engines. When the "Ferret" was lengthened this summer, he strongly recommended that the power of her engines should be increased; but the Post-office would not agree to this proposition.

Captain Hamilton found some difficulty in getting permission to have his vessel lengthened; but Captain Elliot, when secretary of the Admiralty, having been detained at Calais with his family for three days, from the packet not being able to put to sea, which a vessel adapted for the station might have done, saw the necessity of having some improvement in the present

* The price then paid was £1. 4s. per ton (*vide* Return, No. 9.)

No. 11.
Statement of
Captain Hamilton.

packets, and strongly supported Captain Hamilton's recommendation, which was, at length, attended to. The "Ferret" has, therefore, been lengthened this summer, but no improvement has been made in the other vessels upon this station, *viz.*, the "Firefly," the "Crusader," and "Salamander."

Captain Hamilton used formerly to report to the agent at Dovor as to the efficiency of the packets on the Dovor station, and when any repairs were required; but has not done so since the recent arrangement with the French Government. The Post-office packets have not been improved in the same degree as those of the private companies, and, consequently, they compete with them on very disadvantageous terms. Had the steamers been the property of the commanders on this station, as the Harwich packets formerly were, they would not only have kept pace with the improvements of the vessels of the private companies, but would have put on such a superior class of vessels as would have entirely done away with any private competition.

The number of passengers who have landed by the mail-boats at Calais from Dovor this year is very much diminished in consequence of the private companies running their vessels frequently to Boulogne. There are now two steamers, the "Water Witch" and "Britannia," put upon the Dovor station, which will run to Boulogne and Calais. They are so very superior to the Post-office packets, that with the advantage of being always enabled to start from the harbour and to save the tide on both sides, they will carry over such a number of passengers as will decrease the receipts of the Post-office packets to an incalculable extent.

An offer was made to the captains on the Dovor station, when steamers were first introduced in the service, to become proprietors of the steamers, as they had formerly been of the sailing packets, at Harwich; but from steam being then in its infancy, they declined the proposal made to them, not having had any experience to enable them to form an estimate of the expense of navigating and maintaining steamers.

The present system adopted at Dovor with respect to the receipt and issue of stores affords no efficient check either against the tradesmen or coal contractor. The agent depends entirely for the account of the quantity of coals delivered, upon the meter employed by the Custom-house. There ought to be a responsible person on the part of the Post-office to see them weighed and measured, for the meter's account can be but little relied upon. Even when coals are supplied to private individuals these accounts are frequently incorrect, and there is a still greater probability that they may be so when the coals are for the packets, when the meter is aware that there is no further check upon the statement he makes. The person who signs the account of the delivery of coals is a Mr. Peake, of the Custom-house. He is not the agent employed by the coal-contractor, but is his brother. The only person who controls the supply of coals is Brayley, the pleyer, who is not paid anything additional for this. He cannot be present during the time the coals are taken out of the store and carried down to the quay by the laddersmen and carters. To show how little reliance can be placed upon the meter's account of coals delivered at Dovor, Captain Hamilton says that lately a private individual, suspecting the accuracy of the meter's account, had two sacks weighed and found one deficient by 17lbs. the other by 8lbs. Captain Hamilton is of opinion that were there an old flat-bottomed vessel placed in a convenient birth in Dovor harbour, appropriated to the sole use of the mail boats, containing therein coals, stores, &c., with a forge upon deck, and under the charge of a responsible practical man living on board, that very great saving of expense would ensue, as the collier could go alongside the store vessel and discharge her cargo into her, under the superintendence of the person on board, and no embezzlement could take place; the great expense and waste in carting the coals and putting them on board the steamers would be avoided. The man in charge would be ready at any time of the night to deliver coals, &c., to the steamers; and should any slight repairs be necessary, the forge on board the store-ship could be made use of, day or night, by the engineers of the packets.

If an engineer were to live on board this store-ship, he might take charge not only of her, but also superintend the whole of the packets, inspecting their machinery on arrival, reporting any neglect of those on board to the agent, which, if he have the repairs to do, he will, to save himself trouble, never omit. This engineer would likewise be in readiness, if from sickness, or any other cause, one of the boats might be in want of one. Were the system adopted relative to the stores and small repairs, there would be no occasion to rent the present warehouse, or employ the Dovor tradesmen, carters, &c.; and Captain Hamilton, from his long experience and knowledge of the packet establishment, considers a very great saving of expense would inevitably follow, and that the service would be performed with great regularity and despatch.

Captain Hamilton has read over the statement of Captain Sherlock, and entirely agrees with the opinion which Captain Sherlock has given relative to the packets upon this station.

(Signed) J. HAMILTON.

No. 12.
Statement of
Mr. Norwood.

No. 12.

Dovor, September 12th, 1835.

Mr. Norwood, Postmaster, Dovor.

HAS been employed by Mr. Hart, the packet-agent, as his clerk, since January 1832, when Mr. Hart was appointed to the Dovor station; makes out all the accounts that are transmitted to the Post-office, which are afterwards signed by Mr. Hart; collects the vouchers from the different tradesmen every quarter, and, after having made a list of them, and ascertained the amount, takes them to Mr. Hart, the agent, who gives a check for the total sum; does not consider it any part of his duty to make any observations as to the charges in the tradesmen's

bills, but merely to ascertain the amount of them, and has invariably received a check from Mr. Hart for the total amount of the bills.

The accounts kept are—a daily account of the receipts for passengers, which is transmitted every night to the Post-office; a wæekly account, which is transmitted every Sunday night, containing the total amount of receipts; a monthly abstract of the receipts and expenditure; and a debtor and creditor quarterly account. The vouchers are always sent. There are no other money accounts kept by Mr. Norwood, nor any accounts whatever relative to the receipts or issue of stores.

There is an account of the quantity of coals consumed by each vessel made out and transmitted to the Post-office once a-month. This account is taken from the bills of the carter and laddermen for putting the coals on board. Is not aware whether the captain, engineer, or any person on board the vessels, keeps an account of the coals received: depends entirely on the carter's and porter's bills in making out this monthly return. It has never been the practice to keep copies of the vouchers. There are no means of ascertaining here the quantity of stores which have been supplied for any vessel, but the cost can be made out from a copy of the abstract of the tradesmen's accounts. Could ascertain by inquiring of the tradesmen whether any alteration had taken place in the price of oil, tallow, or any other of the small stores, but has no other means of information, as the vouchers are not kept here, nor copied before being sent to the General Post-office. All the accounts connected with the packets are kept at the Post-office by Mr. Norwood. He receives an allowance of £2 a-year from the agent for stationery.

Three foreign mails are made up at Dovor,—one for Calais, another for Boulogne, and a third for Paris, which includes letters for Italy, Spain, Switzerland, and some parts of Germany. The postage to Calais was formerly 1s. 2d., but has been recently reduced to 6d.: this change has given the greatest satisfaction at Dovor; the charge formerly made of 1s. 2d. was a subject of general complaint. The change which has taken place is not yet generally known, and people, in bringing a French letter, frequently tender 1s. 2d. Mr. Norwood feels satisfied that the reduction in the postage to France will eventually be beneficial to the revenue. The former high rate was a great inducement to people to send their letters by the packets without the medium of the Post-office.

No mail is made up at Dovor for Ostend, and the present charge for a letter from Dovor to Ostend is 1s. 10d. As Ostend letters from Dovor are all sent up to London, there is always a delay of two days, and sometimes of three, in consequence of an Ostend mail not being made up here. Does not conceive that there can be any objections to making up a bag for Ostend, nor would it materially increase the labour of the postmaster at Dovor.

(Signed)

WILLIAM NORWOOD Postmaster.

No. 13.

Captain *E. Lyne*, of the "Crusader" Steam-packet.

Dovor, 11th September 1835.

Has been 26 years in the Post-office service, commanding packets; has commanded a steam-packet for nine years. He is of the same opinion as Captain L. Smithett, that, if the "Crusader" was lengthened and had greater power, she would be infinitely better calculated for the duties she has to perform. He says that yesterday he could not make any progress from Ostend, owing to the inferiority of the "Crusader," and that, after remaining all night at the back of the Goodwin Sand, he was obliged to bear up this morning for Ramsgate, and land his mail; whereas, if he had had a better vessel, with greater power, he could have arrived here last evening, in place of this morning. The French vessel that left Calais yesterday, being of great power, made her passage easily.

He also states that, from the great competition between the French and English Post-office steamers, he takes three times the number of five-shilling passengers he did formerly.

With respect to the small stores he states that the first mate generally purchases them, and they are paid for by the agent quarterly. The mate keeps a book containing the amount of such purchases, but it is never demanded by the agent or the Accountant-General at the Post-office, to check the tradesmen's accounts.

He considers the mailman the responsible person for the mail; he likewise considers the first mate as the responsible person for the passage-money, as he collects it and gives it to the agent: the captain signs the account of passengers, which is daily delivered to the agent at Dovor. The account is also signed by the mailman or second mate. He is not aware of what the duty of the agent at Ostend consists in.

(Signed)

E. LYNE.

No. 14.

Captain *Luke Smithett*, Commander of the "Arrow" Ostend Steamer.

10th September 1835.

The duties of the packet-agent at Ostend are to receive the Government despatches and purchase the stores required for the vessels at Ostend. The same tradesmen are always employed, and the mate orders from them whatever articles may be required for the vessels.

H

No. 12.

Statement of
Mr. Norwood.

No. 13.

Statement of
Captain Lyne.

No. 14.

Statement of
Captain Smithett.

No. 14.
Statement of
Captain Smithett.

He does not give the agent an account of the stores supplied, but he ought to see that the stores purchased are delivered on board. The tradesmen send their bills to the agent, who submits them to the captain for his signature. Quarterly accounts of these disbursements are transmitted to the agent at Dovor, and a remittance is made by him, on receipt of this account, to the agent at Ostend. The agent's signature alone is attached to this account. Trifling disbursements on board are paid for by the mates, and repaid to them by the agent at Dovor.

The coals at Ostend are supplied by contract with the General Post-office, the present price being £1. 3s. a ton, including all expense of putting them on board. They are not equal in quality to the coals, supplied at Dovor; they are Flemish coals, from Mons. There is no store for coals at Ostend; they are supplied by the contractor as required. The second mate generally sees the coals weighed before they are sent on board, and the agent has nothing to do with them further than paying the contractor's bills. The chief mate gives a receipt for the coals. The engineer, carpenter, and other officers, receive an order from the captain to get whatever articles they may require from the tradesmen at Ostend. The different officers on board judge as to the quality of the stores supplied, and would complain to the agent if they were in any way inferior.

When any repairs of consequence are required at Dovor the captain makes a report to the Post-office through the agent, and receives the directions of the Postmaster-General as to the manner and place in which these repairs are to be executed. In case these repairs are not properly done, the captain reports to the Post-office. Bills for repairs are sent to the captain of the vessel, who reports if they are properly executed, and signs the bills.

No reduction of the scale of fares has been made for the last two years. Formerly the captain used, at his discretion, to take very reduced rates for passengers when there was great opposition on the station, but the Post-office packets were never the first to reduce fares. The stewards are appointed by the captains, and receive 12s. a-week and the profits of anything supplied to the passengers. The Post-office furnishes the cabins, but the stewards replace breakage of crockery, &c.

The Post-office packets on this station are capable of great improvement, and would, if lengthened, and with larger engines, perform the voyage with greater regularity and in much shorter time; at present they are too small, and the engines have not sufficient power, especially in the winter season. The "Arrow," which Captain Smithett commands, has been lengthened. Its present length is 108 feet, breadth of beam 17 feet. The "Crusader," "Salamander," and "Firefly," are about 14 feet shorter than the "Arrow." (The "Ferret" about the same length.) These vessels, if lengthened about 10 feet, and with two engines of 30-horse power each, would be particularly well adapted for this station, and passengers would then, in all probability, give them a decided preference to the French and English vessels which now run from Dovor to Calais in opposition to them. Only one of the French boats surpasses the Post-office packets in speed, and that vessel has a high-pressure engine.

Captain Smithett commanded his present vessel when on the Portpatrick station. Since that period she has been lengthened, and her engines increased from two twenties to two of 30-horse power; and he considers that she would now perform a voyage in half the time she formerly did in strong head-winds, and that she could go too in weather that she could not have done formerly. The "Salamander," "Firefly," and "Crusader," three of the Dovor packets, are smaller than the "Arrow" formerly was, and he therefore supposes that lengthening them, and giving them greater power, would produce similar advantages to those gained by the "Arrow," and thereby render them in every respect better adapted for their present work. Taking the size and situations of the harbours into consideration, he thinks two 35-horse power engines, if any alterations are made, would be still more beneficial.

Captain Smithett states that the above observations, relative to the size of the packets and power of the engines, equally apply to the station of Portpatrick, where he had seven years' experience in command of a Post-office steam-packet. From the inferiority of the vessels on that station he has often been detained in port when, had the vessels been of the description he recommends, he could have made the passage with ease.

(Signed)

LUKE SMITHETT.

No. 15.
Letter of
Captain Smithett.

No. 15.

Dovor, 12th September 1835.

SIR,—According to your request, I beg leave to suggest for your information the following observations relative to the present communication between Dovor and Ostend.

1st, That the "Salamander" should be lengthened from 10 to 12 feet by the bow, and the power of her engines increased by enlarging her cylinders.

2d, That, when the "Arrow" may require new boilers, the power of her engines should also be increased by putting in larger cylinders.

These alterations would, in my opinion, render the vessels on the Ostend station as efficient as any vessels could possibly be for that service, and increase their speed very much in bad weather and head-winds. I do not recommend any alteration in the hours of departure from Dovor, but it is advisable that the time of leaving Ostend should be as soon after seven A. M. as possible, in place of half-past eight, as at present. This would, in the winter season, be of the greatest advantage to the regularity, as well as the certainty, of getting across before night.

With respect to the days of leaving Ostend, I do not see they can be better arranged so as to give each packet a sufficient time to overhaul her engines and boilers; and every Wednesday and Saturday there are despatches from the Ambassador in Brussels.

As far as relates to the supply of stores, I consider the agent to be the best judge as to whether there can be any improvement; but I am certain, as regards myself and officers, that no improper or extravagant consumption of anything ever takes place on board the "Arrow."

J. R. Gardiner, Esq.

I am, Sir, your obedient servant,

LUKE SMITHETT.

No. 16.

Captain Robert Sherlock, of the "Firefly" Steam-Packet,

Dovor, 14th September 1835.

Has been 24 years captain of a Post-office packet, and eight years in command of a steamer. Is of the same opinion as all the other captains on the Dovor station respecting the dimensions and power of the vessels best adapted to perform the service, *i. e.*, that they should have two engines of 35-horse power each, and should be of the same size as the "Arrow."

Captain Sherlock states that the Firefly is very inferior to the French Post-office packets, and even to the private steamers on this station, and that, consequently, he loses many passengers, and makes very uncertain voyages in bad weather. He is of opinion that if better vessels were employed by the Post-office they would much oftener save the tide in the harbours and avoid anchoring outside, frequently to the great risk of landing their passengers in boats, and always attended with much expense in wear and tear and consumption of fuel.

Owing to the late regulation respecting the arrival of the English mail at Calais, at 11 A. M., a very serious loss has been sustained by the English packets. The expense of maintaining them has been increased, and the receipt of passage money greatly diminished. This occurs in consequence of the English packet being now obliged to lie afloat outside Dovor harbour all night to be in readiness for departure with the morning mail, and she must keep her steam up at an increased expenditure of coals, equal, at least, to what would be necessary for the voyage. While in this situation, outside Dovor harbour, few passengers will go to the expense of boat-hire to convey them on board at so early an hour as that fixed for the departure of the mails, when, by waiting until the tide answers in the harbour, they can get across to Calais either in the private steamers or French Post-office boats for 5s. The packet also, when obliged to remain in the roads, loses the freight on carriages, horses, bullion, &c. &c., from the great expense and difficulty of getting them on board.

The French Post-office packets have here a great advantage. The Paris mail arrives at Calais about 11 o'clock, and the time allowed for conveying it to Dovor is until 10 o'clock at night. They are thus enabled to start from Calais harbour, having very seldom to wait outside, and having no mail to carry back from Dovor, they can generally arrange their departure so as to suit the tide on both sides of the Channel, and thus avoid all the expense the English packets are put to in addition to their loss of freight and passengers. He believes that it was at the suggestion of the Calais Post-office captains that this arrangement of arriving at Calais at 11 A. M. was adopted, for the purpose of giving them the passengers, and that they would have completely succeeded in this, had not a private company at Dovor opposed them. This private company conveyed, from the 1st of April 1834 to the 31st of March 1835, 3,497 passengers, 116 carriages, 569 horses, amounting in freight to £2,500, from Dovor to Calais only, not including what they brought home. They are now building a vessel very superior to any on the station, with two engines of 35-horse power each; a proof that they also think that this power and class of vessels is best adapted for the Dovor and Calais station. He estimates the loss in freight sustained by the three English packets from Dovor to Calais, by the recent arrangement with the French Government, at £4,000 a-year. If the time for the arrival of the English mails at Calais were extended until one o'clock this loss might be avoided, and the mails would still get to Paris at seven A. M. the following morning; 18 hours being the time allowed from Calais to Paris.

The French packets frequently take cabin passengers for half fare, to oppose the English packets when they both leave together. From this conduct on the part of the French packets in reducing the fare, Captain Sherlock says if he did not do the same he would get no passengers except those of the first respectability; and therefore in self-defence he is obliged to take his passengers at 5s., and there is no distinction made on board between those who pay 5s. and those who pay 10s. 6d. on those occasions. The arrangement about the passengers' fares is left to the chief and second mates, who collect the money, the captain having, during the voyage, to attend to the navigation of his vessel.

Captain Sherlock does not consider himself responsible for the stores on board; there is no instance of the captain of a packet being made accountable, as in the navy, for any deficiencies. The captain merely sees there is no wilful waste while at sea. The small stores are got from tradesmen, by the order of the chief mate, and are paid for quarterly by the agent. The agent never receives any account from the captain or mate of the supply thus delivered on board the packet. The first mate pays for any stores purchased at Calais, and is reimbursed by the agent at Dovor on producing his bills.

Letter of
Captain Smithett.

No. 16.

Statement of
Captain Sherlock.

No. 16.

Statement of
Captain Sherlock.

The same duty is performed by the mailman, or second mate, at Calais as at Ostend. Captain Sherlock is not aware of any duty connected with the packets which is performed by the packet agent at Ostend. There is no agent at Calais, nor does he see any necessity for one there.

Captain Sherlock is decidedly of opinion that if better vessels were on the station, with more power, the service could be performed with a great reduction of expenditure, and if the hour of arrival at Calais could be altered, as he suggests, from 11 A. M. to 1 P. M., private competition would altogether cease, and the French competition be so considerably reduced as to make the passengers pay full fare, and not half fare as at present.

(Signed)

R. SHERLOCK, Captain, "Firefly."
E. C. RUTTER, Chief Mate.
H. L. PASCALL, Mailman.

No. 17.

Statement of
Captain Mudge.

No. 17.

Captain *Robert Mudge*, His Majesty's Packet "Salamander," Ostend Station,

Dover, 24th September 1835.

Has read the statement of Captain Lyne, and entirely agrees with him that the vessels ought to be lengthened to the extent that the "Arrow" and "Ferret" have recently been, and that none of the packets should have less than two 35-horse power engines. Captain Mudge is of opinion that by lengthening the vessels, and giving them additional power, there would be less of wear and tear, arising from the capability they would then possess of more frequently saving the tide on both sides of the Channel. He also supposes that if a store-vessel were placed in Dover harbour, with a forge on board, under the control of an efficient engineer, who would visit every packet on her arrival, inspect the machinery, and report the defects (if any), with the cause, either from neglect, or otherwise, of those on board, that a saving of expense might ensue. This engineer would have the superintendence of the delivery of all the small stores, acting under the agent, who would check him. He might have a fixed salary of £150 a-year; be obliged, in conjunction with the engineers of the packets, to do all small repairs both to the engines and boilers; and should any of the engineers be sick, or unable to perform their duty from accidental causes, he could supply their place for the necessary time, and thus avoid any delay or inconvenience to the public service. Such a man, under an agent of practical experience in steam navigation, would render the packets on this station very efficient.

Captain Mudge is of opinion that the Ostend station, from being so much exposed, and the dangerous nature of the Flemish coast, more peculiarly requires power and speed in the vessels, and had the "Salamander" been his own property, as the sailing packets formerly were the property of the captains, he would long since have lengthened her, and given her additional power, and improved, if possible, her accommodations, if he could by any means have raised funds for doing so. He thinks that by thus acting he would ultimately be a gainer, and probably have prevented competition from the private companies, who invariably keep improving their vessels in construction and power as the science of steam navigation advances.

Statement of
Mr. Selater.

No. 18.

Mr. *Hugh Selater*, First Mate of the "Ferret."

Dover, 12th September 1835.

It is the duty of the chief mate to receive the fares from passengers, and keep an account which is delivered to the agent each voyage. An agreement was entered into between the French and English Governments, about 12 months ago, by which the fares to be taken, as agreed on both sides, were 10s. 6d. for cabin passengers, and 5s. for deck passengers. The French boats, Mr. Selater thinks, have never strictly adhered to this agreement, but carry cabin passengers frequently at half fare. He has orders to keep the cabin passengers and deck passengers distinct from each other, and abides by his orders as strictly as he can. Passengers paying half fare very seldom go into the cabin except in bad weather. In fine weather passengers very seldom go below, the passage being so short. Formerly there used to be a line drawn across the vessels, and deck passengers were not allowed to go abaft this line. No such distinction can at present be adhered to, in consequence of the opposition with the French boats. There used formerly to be very few deck passengers, not one-half of what there now are.

(Signed)

H. SELATER.

Having read the above statement of Mr. Selater I believe it to be perfectly correct.

J. HAMILTON, Commander of the "Ferret."

No. 19.

No. 19.

Statement of
Mr. Hare.

Mr. S. Hare, First Mate of the "Salamander."

Dovor, 12th September 1835.

Has been 24 years in the service of the Post-office. He collects all the passage money of the "Salamander," which he delivers to the agent at Dovor. Since the competition with the French Post-office packets the number of 5s. passengers has increased five-fold, and the receipts have very much diminished on the Calais station.

When small stores are wanting for the engine-room, such as oil, tallow, oakum, candles, &c. the stoker goes to the tradesmen (who are seldom or ever changed), and gets what he wants. He takes with him a book, in which the tradesmen insert what they supply. The book is not kept by the first mate, but in the engine-room; the mate seldom or ever sees it; nor is it ever sent for by the agent, to check the tradesmen's accounts. The stoker may, or may not, take the book, just as he chooses. The engineer sends in to the captain a monthly account of the expenditure of oil and tallow, which is forwarded to the agent. Mr. Hare does not consider himself at all responsible for these stores, either in the amount received or in the expenditure, of neither of which does he keep an account, that being done by the engineer. He is not aware whether the captain is responsible for the supply of stores. Captain Mudge is the commander of the "Salamander," and is at present on leave of absence, the vessel being under repair. Mr. Hare believes that the French packets at present carry their passengers generally for 5s. when their hour of starting is the same as the English packets. The English packets have, consequently, been obliged, in their own defence, to carry passengers at the same rate. No distinction is made on board between the passengers paying 10s. 6d. and those paying 5s. The mate, in taking the fares from the passengers who pay 5s., endeavours to do it without being observed by those who pay the full fare. The pleyer uses his discretion in making an agreement to carry passengers for 5s. He does not give any written note or memorandum of the passengers with whom he has made this agreement, but generally points them out to the mate, mailman, or steward. It frequently happens that a passenger, on being asked by mistake for the full fare, says that he will not pay more than 5s.: in that case they do not demand more than 5s. There is no distinction at present made on board between the passengers paying the full fare and those who pay half fare.

Mr. Hare, after 23 years' experience in the packet service, three of which have been in steam-boats, is of opinion that were the "Salamander" lengthened, and had increased power, she would be infinitely better calculated to perform her duty, and do it with much greater regularity than at present. The "Salamander" has been in harbour for the last three weeks, under repair. The repairs that are now executing are not, he believes, contracted for, but are executed under his superintendence as chief mate, the captain being absent. Mr. Hare keeps an account of the number of hours the men are employed, and takes his account to the agent at the end of the repairs. At Ostend whatever coals are required are supplied by the contractor, on an application from the mate. There is no written order given when coals are required, but the second mate, or one of the crew, goes to the coal-merchant, and applies for whatever is necessary. It is not customary to see the coals weighed before they are put on board (it has been occasionally done), but the coal-merchant sends an account of the quantity supplied, which is signed by the first mate. There is no other signature to this account. The coals are sent down in bags, and the mate could, if he suspected the proper quantity was not sent, form a pretty correct estimate, from the size of the bags, of the deficiency. The mate has had the bags occasionally counted, but never had any of them weighed. Each bag ought to contain 1 cwt. The agent at Ostend does not superintend the delivery of coals. He is not aware of what the duty of the agent at Ostend may be, having so little to do with him. He does not interfere with the supply of stores of any description. Any small stores that are required at Ostend are paid for by the agent. He collects the bills, and sends them to the captain for his signature before signing them. The captain generally shows these bills to the mate before signing them. Few stores are required at Ostend, with the exception of coals and carpenters' stores.

(Signed)

S. HARE.

No. 20.

No. 20.

Statement of
Mr. Knight.

Richard Knight, Second Mate and Mailman of the "Crusader."

Dovor, 11th September 1835.

Has been 16 years in the Post-office service. Considers himself the responsible person for the safe delivery of the mail. He receives the mail at the Post-office at Dovor, accompanied by a way-bill. On delivering the mail at Calais, his way-bill is signed at the Post-office there, which, on his return to Dovor, he delivers to the postmaster. This way-bill describes the species of mail sent, and the time it is delivered at Calais Post-office.

Mr. Knight takes the Consul's bag, which he delivers at the Consular Office, and likewise a small bag, supposed to contain Dovor letters, which he delivers at the Post-office at Calais. He also observes the time when the mail-coach leaves Calais, which he reports to the first mate, for the information of the Dovor Post-office. He occasionally takes the mail to Ostend; and delivers it to the Post-office in the same manner he does at Calais, but takes no way-bill.

No. 20.
—
Statement of
Mr. Knight.

He also takes to Ostend a bag for the Post-office packet agent, which contains the Consul's bags, which Mr. Knight receives from the agent, to convey to the Consul's house.

Mr. Knight, on returning from Ostend, brings the mail from the Post-office at Ostend, and the agent's bag, which contains all the Consul's despatches. He considers he does the same work at Calais, where there is no packet agent, as at Ostend, where there is one. Mr. Knight is not aware what the duty of the Ostend agent consists in, except his receiving a bag of letters.

All distressed British subjects who are sent home in the packets from Ostend, have 7*s.* paid by the Consul for their passage, but those sent from Calais by the Consul are not paid for.

Mr. Knight assists the mate in collecting the passage money on the Calais station. He is generally about the hotels at Dovor and Calais, for the express purpose of getting passengers. At present he is obliged, from the great competition with the French steam-packets, (who take all their passengers at 5*s.* when any English steam-vessel is going at the same time,) to take passengers at the same rate; *i. e.*, 5*s.* The nominal rate of passage by both the French and English Post-office packets is 10*s.* 6*d.* for cabin passengers, and 5*s.* for deck passengers; but now, generally, this great competition enables the public to obtain a passage for 5*s.*, and there are but few 10*s.* 6*d.* passengers at present. Mr. Knight takes the names of all the passengers conveyed backwards and forwards. When French money is taken from passengers it is at the rate of 25 francs to £1 sterling. This rate never varies, whatever the course of exchange may be.

Having had an experience of 32 years in various classes of vessels, he considers that an increase of power to the engines, and length to the vessels, would render them much more efficient than at present, and would give superior accommodation to passengers. Three weeks ago the "Courier," a French packet-boat, starting at the same time with the "Crusader," in order to get some passengers and a carriage, offered to take the whole for nothing if he did not get in 20 minutes before the English boat. The passengers declined the offer, and took the English boat. The French boat did get in nearly 20 minutes before them.

(Signed) R. KNIGHT.

No. 21.
—
Statement of
Mr. Brayley.

No. 21.

Philip Brayley, Plyer.

Dovor, 10th September 1835.

Is plyer at Dovor, and was formerly a mailman. Has been 33 years in the service of the Post-office. His duty is to look after passengers for the Post packets. At one period, when the opposition on this station was greater than it now is, he had a discretionary power of bargaining with passengers, and has frequently sent over six or eight passengers for £1. The way this arrangement was made was by his going down to the packet with the passengers, and saying to the mate, Such a number (six or eight,) are to pay only £1. About two years ago a regulation was made by the Post-office, prohibiting the reduction of fares, and fixing the rates at 10*s.* 6*d.* for cabin passengers, and 5*s.* for deck passengers. Within the last four months the French packets have been in the habit of carrying cabin passengers for 5*s.*: the consequence is that people frequently say that they will not go in the English vessels unless they are taken as cabin passengers for 5*s.* In such cases, to prevent losing them altogether, Mr. Brayley agrees to carry them for the half fare, and mentions to the mate or mailman who are to pay 5*s.* and who 10*s.* 6*d.*

Receives £1 per week from the Post-office, as plyer; has no other emolument from the Post-office; but Mr. Hart employs him to superintend the delivery of stores, and the key of the stores is in his possession. When coals are delivered into the store by the contractor, a meter checks the quantity, in order to charge the duty. Neither the agent, nor any one on the part of the Post-office, attends to ascertain whether the quantity delivered is the same as charged in the contractor's bill. The meter delivers to Mr. Hart an account of the quantity of coals, signed by an officer of the custom-house; upon receipt of which, he gives an acknowledgment to the contractors for the quantity, as stated in the meter's account.

When coals are required for the use of the steam-boats an application is made to Mr. Brayley by one of the officers of the ship. No written order is given; they merely say, "We want such a quantity of coals," which are sent down from the store; and if the quantity is not sufficient, another application is made. On being told the quantity required, he desires the carter (who contracts to put the coals on board from the store at 1*s.* 6*d.* a load of 18 cwt.) to take the required quantity to the vessel. Mr. Brayley being obliged, during the time coals are put on board, to ply for passengers, is in the habit of giving the key of the store to the carter, or one of his porters, who put the coals into bags, and put them on board the vessel. They are not weighed or measured by the carter, or any other person, who only form an estimate, from the size of the bags, of the quantity. The key of the store is returned to Mr. Brayley either the same evening or next morning, according as the issue is during the night or in the day. The coals are very frequently put on board at night. When a vessel is expected late at night, they are taken down to the quay in the early part of the evening, and left there until the arrival of the vessel. The laddermen or porters look after the bags when they are left on the quay. During the time the store is open no person is present but the laddermen.

Mr. Brayley receives occasionally a small gratuity from the contractors for coals, but has no other perquisite, nor does he receive any allowance from the agent for superintending the

delivery of the stores. The carter keeps the only account of the issue, which the agent receives every Monday morning. The carter keeps this account of the issues, in order to make his charge for putting them on board. This charge is made against each vessel separately, which gives the means of ascertaining the quantity they receive.

(Signed) P. BRAYLEY.

This appears to me a correct statement.
September 11th, 1835.

(Signed) GRATIAN HART, Agent, Dover.

No. 22.

Philip Lanlis, Plyer.

Calais.

Has been plyer for the Post-office packets since 1815, having been previously a slipwright in the arsenal at Boulogne. Was originally employed by the captains of the Harwich packets, and has continued in the service ever since. When the French and English packets start from Calais at the same time, passengers are carried over at half fare. The waiters at the different hotels at Calais are in the practice of informing travellers that if they will go in the French boats they can get over for 5s. When Lanlis tells travellers the cabin fare of the English packets is 10s. 6d., they generally say, "We shall not go with the English boat, as the waiter here tells us we can get by the French packet for 5s." Lanlis is consequently obliged to ask the captain or mate to take them for 5s., which they do rather than lose them.

The estafette from Paris arrives about 10 or before 11 o'clock, and starts for Paris at noon. The despatches from the English Ambassador at Paris arrive at Calais twice a-week—Wednesday and Sunday—at an early hour in the morning, at two, three, or four o'clock. Lanlis reports the hour the courier arrives to the captain of the Post-office packet. The despatches are always left at the Consul's. The French courier generally takes his despatches over in the English boat, as the French boats, not being obliged to be at Dover until 10 o'clock at night, wait at Calais for the tide. Since the new regulation between the French and English Governments the passengers by the English boats have very much decreased.

No. 23.

Thomas Ismay, Ironmonger, at Dover.

Dover, 12th September 1835.

Has supplied the packets with stores in his line for the last 30 years, and previous to the introduction of Government vessels he supplied the private packets. He supplies the three Calais boats, and does all the small repairs in the engines and boilers. The engineer orders the stores from him without any other authority. He takes no book, nor does he receive any account of these stores from Mr. Ismay. Any stores not relating to the engine-room are ordered by the first mate; neither does he receive any account of the stores so delivered by his orders. Mr. Ismay enters all these issues of stores in his book, and he sends in his accounts quarterly to the agent, when he is paid. He is not aware that the agent has any other document than his bill to check the amount of stores supplied, nor does the agent know, until the expiration of the quarter, what amount of stores has been issued.

(Signed) THOMAS ISMAY.

The packets supplied by Mr. Ismay are the "Crusader," "Ferret," and "Firefly."

No. 26.
Statement of Mr. Cass.

No. 26.
Mr. Cass, Packet Agent, Ostend.

Ostend, 19th September 1835.

Has been employed by the Post-office as packet-agent since 1820. In April 1828, two Post-office steamers were put upon the Ostend station; their days of arrival from Dover were Wednesday and Saturday, and departure for Dover the same. Since 28th October 1834, mails have arrived from Dover four times a-week, viz., on Tuesday, Wednesday, Friday, and Saturday, and they return the following days. When there were only two mails a-week from Dover, the Post-office employed the same number of steamers they do now.

The coals supplied at Ostend for the packets are contracted for at £1. 3s. per English ton of 1,015 killogrammes. The price used to be £1. 6s., but has been latterly reduced. The amount paid quarterly for coals here averages nearly £100; they pay no export duty, the Belgian Government having agreed to take it off upon a representation made by the agent here.

Mr. Cass is not aware upon what terms English coals could be imported for the use of the packets, but will ascertain. The coal contractor is paid quarterly, and all the bills for small stores are settled at the same time. He collects all the bills, and makes an abstract of them, which is transmitted to Mr. Hart, the agent at Dover, who remits the amount. Mr. Cass does not himself attend to see the coals delivered, but the mates have instructions from him to see them weighed before they are put on board, and he believes that they always do so.

Despatches are received at Ostend for the Ambassador at Brussels twice a-week. These despatches are brought on shore by the mailman, and conveyed to Mr. Cass in the first instance; they are not forwarded to Brussels by him, as formerly, but taken to the Consul. Thinks this a very inconvenient arrangement. By carrying the despatches from one to the other, as is done at present, there is always a loss of half an hour. The same person who brings the despatches to him takes them on to the Consul.

At present there is no contract for the supply of coals at Ostend, nor has there been for about the last year and a half. When the packets were first established a contract was made with the coal-merchant, who at present supplies the coals for one year. Mr. Cass received tenders at that time from different coal-merchants of the town, and Mr. M'Laggan's was the lowest. Since that period the price of coals having fallen, he obtained a reduction in price of 3s. a ton from Mr. M'Laggan. There is no additional expense for putting the coals on board the packets. The only accounts which pass through the hands of the agent at Ostend

are the tradesmen's bills for small stores. Mr. Cass believes that the mates keep a book containing an account of the quantity of coals and other stores received on board the packets, but this book is never sent to Mr. Cass when he examines the vouchers; a certificate, however, of all the principal stores supplied to the packets, and signed by the first mates, is always delivered to him as a check upon the tradesmen's bills. The only account retained at Ostend is a copy of the quarterly abstract of the tradesmen's bills. The vouchers are not kept at Ostend, but forwarded to the agent at Dovor, and no copies of them are made here.

The Post-office packets go to sea frequently in the winter season, when no other vessels leave this harbour. There is a steamer betwixt London and Ostend, belonging to the General Steam Navigation Company. This vessel has several times remained in harbour when the Post-office packets have put to sea and made their passage. There have been instances of the Post-office packets making two or three voyages while the London steamers remained in harbour on account of the stress of weather.

Monsieur Doussaint.

No. 28.

Treaty for the Conveyance of Letters between England and France.

The Postmaster-General of the United Kingdom of Great Britain and Ireland, and the General Administration of the Posts in France, being desirous to improve the communication between the two countries, and to maintain the good understanding which exists between the Governments and the people of the two states—

We, Charles Lennox, Duke of Richmond, Earl of March, Duke of Lennox in Scotland, and Aubigny in France, Knight of the Most Noble Order of the Garter, Postmaster-General of the Posts of His Majesty the King of the United Kingdom of Great Britain and Ireland, furnished with powers by His Majesty the King of the United Kingdom of Great Britain and Ireland, dated Brighthelmstone, the 12th November, 1832, on the one part; and We, Joseph Xavier Antoine Conte, Director of the Administration, and President of the Council of Posts, Knight of the Order of the Legion of Honour, furnished with powers by His Majesty the King of the French, dated Paris, 6th September, 1832, on the other part, having communicated our respective powers, have agreed as follows:

ARTICLE 1.—There shall be a regular and efficient communication by post between Dovor and Calais, six days in every week at the least, for the conveyance of the mails. Each office shall transport its own mails and despatches to the frontier of the Corresponding-office.

ARTICLE 2.—The Postmaster-General shall despatch an English packet-boat from Dovor every Tuesday, Wednesday, Thursday, Friday, Saturday, and Sunday, (weather permitting,) with the mails and despatches from the United Kingdom, for France, and for countries beyond France, which shall be delivered to the Director of the Posts at Calais.

The Administration of Posts in France shall expedite a French packet from Calais, (weather permitting,) every Sunday, Monday, Tuesday, Wednesday, Thursday, and Friday, with the mails and despatches from France, and countries beyond France, for the United Kingdom, its colonies and dependencies, which shall be delivered to the agent of the Postmaster-General at Dovor.

ARTICLE 3.—If either of the two offices should think proper to send a packet, with or without a mail, on the seventh day of the week, it shall be at liberty so to do.

ARTICLE 4.—The Postmaster-General engages to deliver the mails to the Director of Posts at Calais, at 11 o'clock in the forenoon, in ordinary weather, or as soon as possible after that hour.

The Administration of the French Posts engages to deliver its letters to the agent of the Postmaster-General at Dovor, at 10 o'clock in the evening, in ordinary weather, or as soon after that hour as possible. After the arrival of the packets at Dovor and Calais, the cor-

No. 28.
Treaty for the Conveyance of Letters between England and France, June 14, 1833.

No. 28.
Treaty for the Con-
veyance of Letters,
&c.,
June 14, 1833.

respondence shall be forwarded to its destination by the first and most expeditious means of conveyance at the disposition of the two offices respectively.

ARTICLE 5.—The packet-boats to be employed by the two offices for the conveyance of the correspondence shall be steam-boats, of sufficient dimensions and power of machinery for the service. They shall be national vessels, *bond fide* the property of the state. They shall be considered and treated in the ports of the two countries as vessels of war, and entitled to all the consideration and privileges which the interests and general importance of their functions demand, and shall not be detached from their specific duty, of the conveyance of mails and despatches, by any authority whatever, or be subject to order of seizure, embargo, or *arrêt de Prince*.

ARTICLE 6.—The packet-boats of the two offices shall be at liberty to take on board, as well at Dover as at Calais, all passengers, of whatsoever nation they may be, to convey them, with their personal baggage and effects, from Dover to Calais, and from Calais to Dover, on condition that the captains observe the regulations of the respective Governments relative to the arrival and departure of travellers; but they shall be prohibited from conveying goods or merchandize on freight.

ARTICLE 7.—The captains of the packets of the respective offices, or the persons in charge of the mails, shall, on their arrival, deliver to the corresponding office a bill which shall specify the delivery to them of the bag or bags, closed and sealed, and shall bring back an acknowledgment of their safe transmission from the office by which they have been received.

ARTICLE 8.—The captains shall, in all practicable cases, proceed direct to their respective destinations; and, if compelled by unavoidable circumstances to make any other port than Dover or Calais, it will be upon their own responsibility, and subject to such investigation as either of the offices may deem it advisable to institute, to obtain a justification of the proceeding. If they should make any other than their destined port, the office of the country in which the mails shall be so landed shall engage to forward them without delay to their destination.

ARTICLE 9.—The captains of the two offices are prohibited from taking charge of any letter not included in their mail bag, excepting always the despatches of their respective governments. They shall be careful that no letters are fraudulently conveyed by their crews or by passengers, and they shall make known to the proper party any such breach which may be committed.

ARTICLE 10.—The British packet-boats shall pay on their entry and departure from the port of Calais, or any other port of the kingdom of France, all navigation-dues and port-charges, such as now are or shall hereafter be established by the laws and regulations of the kingdom: and, reciprocally, the French packet-boats shall pay on their entry and departure from Dover, or any other port of Great Britain, all the navigation-dues and port-charges now existing or hereafter to be established by the laws or regulations of the United Kingdom.

As tonnage-dues are established in Great Britain only to counterbalance the duties to which English vessels are subject in the Pas de Calais, in order to equalize the disbursements and establish a balance in this respect between the two offices, the French office will pay to the English office, as compensation, a sum for every passage equal to that which an English packet-boat of the same tonnage as the French packets would be liable to pay at Calais.

The dues will be paid at Calais by the Director of Posts of that town for the English office, and in any other port of the kingdom by the English captains, who shall be reimbursed by the Director of Posts at Calais; and the dues at Dover shall be paid by the agent of the packet-boats of the English mail for the French office, and in any other port by the French captains, who shall be reimbursed by the said agent; and in case the tonnage of the English packet-boats shall exceed that of the French packet-boats, or the tonnage of the French packet-boats shall exceed that of the English packet-boats, the amount of such excess shall be paid by the office to which such packet of greater tonnage shall belong. The accounts relative to these duties shall be regulated quarterly.

In the event of the English packets being exempted, at any future period, from either the whole or a part of the tonnage-dues or port-charges in France, the French Post-office shall be exonerated to the like extent from the compensation or payment to the British office, on account of the French packets, now payable in virtue of this Article.

ARTICLE 11.—The letters from France destined for the English islands of Jersey, Guernsey, and Alderney, may, on account of the great proximity of the western coasts of France, be forwarded, at the desire of the senders, to one of the French offices of St. Malo, Cherbourg, or Granville, or continue to be sent by way of Calais and London.

ARTICLE 12.—If hereafter, and with mutual consent, the two offices should deem it advantageous to establish one or several supplementary communications between Great Britain and France, by other points of egress than Dover and Calais, these communications may be established without altering in any way the stipulations agreed upon in the present treaty.

ARTICLE 13.—In case of war between the two nations, the mail packet-boats of the two offices shall continue their navigation without impediment or molestation, until a notification on the part of one of the two Governments that their services are to be discontinued; in which case they shall be permitted to return freely, and under special protection, to their respective ports.

ARTICLE 14.—The stipulations of any former treaties between the two offices, so far as regards the conveyance of the mails across the Channel, are hereby annulled whensoever they may be in any degree contrary to the provisions and meaning of the present convention.

ARTICLE 15.—The French steam-packets, according to the stipulations of the 5th Article, shall be brought into operation by the 1st of January next, at the latest, and as much sooner as possible.

Until they can be completed, and as soon as the ratifications shall have been exchanged, a provisional arrangement shall be made for the performance of the service six times a-week by the best means in the power of the French Administration, and by steam-vessels not less than four times in each week.

ARTICLE 16.—The present convention is for an indefinite period, and shall be in force from the 1st of July next, or as soon as possible after the ratifications shall have been exchanged, which shall be within two months from this date, or earlier if possible.

If the course of events should render any modifications desirable in any of the Articles, the two offices shall endeavour, by all means in their power, to arrange them amicably; but in case of difference, none of the Articles of the present convention shall be annulled or invalidated by either of the contracting parties without giving six months' previous notice, during which time the convention shall continue to have its full and clear execution, without prejudice to the regulating and balancing the accounts between the two offices after the expiration of the said six months.

ARTICLE 17.—Three copies shall be transcribed of the present treaty, two whereof, the one in English, the other in French, shall remain with the Postmaster-General of Great Britain, and the third, the French on one side and the English on the other, on the same sheet, with the Administration of the Posts of France.

Done and concluded between us, subject to the approval and ratifications of our respective Sovereigns, at the General Post-office, London, this 14th June 1833.

(Signed) CONTE.

(Signed) RICHMOND.

SUPPLEMENTARY ARTICLES.

In addition to the Convention concluded and signed this day by the Postmaster-General of Great Britain and the Director of the General Administration of the Posts of France, We, Charles Duke of Richmond, Earl of March, Duke of Lennox in Scotland and Aubigny in France, Knight of the Most Noble Order of the Garter, Postmaster-General of the Posts of His Majesty the King of the United Kingdom of Great Britain and Ireland, on the one part; and We, Joseph Xavier Antoine Conte, Director of the Administration and President of the Council of Posts, Knight of the Order of the Legion of Honour, on the other part, have agreed upon Supplementary Articles to the following effect:

1. The regulations for the conveyance of English letters in transit through France shall be the subject of ulterior arrangement; and, in the mean time, the Transit Service shall remain provisionally according to the conditions of the treaty of 1802.

2. The Postmaster-General of Great Britain shall supply the Administration of the Posts of France with a list of the rates of postage to be charged upon French correspondence passing through Great Britain to and from countries beyond the seas, with which the Post-office of Great Britain has direct and regular communication.

3. The number and form of the packets of letters sent from one office to the other shall be mutually agreed upon, and may be altered by common consent whenever the advantage of the respective services shall require it.

4. Dead letters, *i. e.* letters which cannot be delivered, from whatever cause, shall be reciprocally returned to the office by which they were originally despatched, without payment, at certain periods, according to the regulation of the respective offices.

5. The rates of passage-money, as well by the British as by the French national packets, shall be mutually regulated between the two offices. These rates may be increased or diminished by mutual consent, but neither of the two offices shall of itself alter or reduce the price for the purpose of obtaining a greater number of passengers, or for any other cause.

6. The preceding Supplementary Articles, although distinct from the treaty, shall possess the same force as if they had been inserted in the treaty itself.

Three copies shall be transcribed of these Supplementary Articles; two whereof, the one in English, the other in French, shall remain with the Postmaster-General of Great Britain, and the third, the French on one side and the English on the other, on the same sheet, with the Administration of the Posts of France.

Done and concluded between Us, subject to the approval and ratification of our respective Sovereigns, at the General Post-office, London, this 14th June 1833.

(Signed) CONTE.

No. 29.

Treaty for the Conveyance of Letters, between Great Britain and Belgium, October 1834.

No. 29.

Treaty for the Conveyance of Letters between Great Britain and Belgium.

The Postmaster-General of the United Kingdom of Great Britain and Ireland, and the Administration of the Posts of Belgium, being desirous to improve the communication between the two countries,

We, Francis Nathaniel Marquis of Conyngham, Earl of Mount Charles, &c. &c., Postmaster-General of the Posts of His Majesty the King of the United Kingdom of Great Britain and Ireland, on the one part; and on the other part, We, Edward Baron d'Huart, Minister of Finance of the Kingdom of Belgium, Member of the Chamber of Representatives, &c. &c., have agreed as follows:—

ARTICLE 1. There shall be maintained a regular and efficient transmission of the correspondence by the route of Dover and Ostend, by means of steam-packets.

ARTICLE 2. There shall be four communications in every week; viz., from Dover to Ostend, Tuesday, Wednesday, Friday, and Saturday; and from Ostend to Dover, Wednesday, Thursday, Saturday, and Sunday.

ARTICLE 3. The correspondence shall be enclosed in sealed mails, and be delivered to the agent of the Postmaster-General, at Ostend.

ARTICLE 4. The correspondence between the two offices, that is to say, the letters from the United Kingdom of Great Britain and Ireland for Belgium, and in like manner the letters from Belgium for the United Kingdom of Great Britain and Ireland, and the British Colonies, shall be reciprocally exchanged, free of all charge or expense, each office reserving to itself the right to demand, for its own account, such rates of postage as it may consider advisable.

ARTICLE 5. The Postmaster-General undertakes, at his own sole expense, the conveyance of the mails by sea, both going and coming. The Belgian office engages to forward all letters and packets in transit by the route of Belgium, either originating on the Continent or destined for the Continent, to and from Great Britain, without charge to the British Post-office, and without requiring any repayment in respect of such transit on account of the General Post-office of Great Britain, but reserving to itself the right to demand upon such letters or packets in transit the rate it may think proper. And moreover, in consideration of the expense that must fall upon the British office in increasing the number of communications, the Belgian office engages to pay it, annually, the sum of £1,000 sterling, as its proportion of such expense.

ARTICLE 6. The Administration of the Posts in Belgium undertakes to defray all ordinary and extraordinary expenses connected with the landing and embarkation of the mails in the port of Ostend, and to do all that is necessary on the coast of Belgium for the safety of the mails, and to facilitate their arrival and departure; and if, in consequence of bad weather or any other accident, the packets should be compelled to make any other port than Ostend, the Belgian office engages, at its own charge, to convey the mails by land to their destination.

ARTICLE 7. The two offices mutually engage to forward the correspondence with all possible expedition, and to take the necessary measures to prevent any delay.

ARTICLE 8. The two offices will use all the means in their power to prevent any illegal conveyance, by their respective agents and servants, or by passengers, of letters otherwise than contained in the mails, excepting always the *bond fide* despatches of the two Governments, which may be addressed to the agent of the British Post-office at Ostend.

ARTICLE 9. The packets of His Britannic Majesty, being Government vessels, shall be exempt from all duties and port-charges in the ports of Belgium; they shall be considered and treated as vessels of war, and entitled to all the consideration and privileges which the interest and general importance of their functions demand.

ARTICLE 10. In case of war between the two nations the mail-packets shall continue their navigation, without impediment or molestation, until a notification, on the part of one of the two Governments, that their services are to be discontinued; in which case they, with the agent of the Postmaster-General, shall be permitted to return freely and under special protection to Dover.

ARTICLE 11. The present convention is for an indefinite period, and shall be in force from the 1st of November next, or earlier if possible; and if the course of events should render any alteration or modification desirable in any of the Articles, the contracting parties shall endeavour to arrange them amicably; but in case of difference, none of the Articles of the present convention shall be annulled or invalidated by either of the contracting parties without previous notice of six months, during which time the convention shall continue to have its full and entire execution.

ARTICLE 12. Four copies shall be transcribed of the present convention; two whereof, the one in English and the other in French, shall remain with the Postmaster-General of Great Britain, and the two others, one in English and the other in French, with the Belgian Post-office.

In witness whereof we have signed the present convention.

TABLE of Fares now charged for Conveyance of Passengers, &c.—12th March, 1836.

Fares charged for Passengers, &c., 12th March, 1836.

	£.	s.	d.
Cabin Passengers, each	1	1	0
Female Servants, each	0	15	0
Male ditto, each	0	12	6
Labourers, working mechanics, or servants out of place, each	0	10	0
Soldiers or Sailors not on duty, each	0	5	0
Paupers with a pass, each	Free.		
Children under Ten Years of Age, to be charged half the rates paid by their Parents.			
Carriages with Four Wheels, each	3	0	0
Ditto, Two Wheels, each	1	10	0
Horses, each	1	10	0
Dogs, with their Owners, each	0	2	6
Ditto, on Freight, each	0	5	0
Parcels of or under 30lbs. weight	0	2	6
Ditto, above 30lbs., 1d. per lb.			
Cash or Bullion, 1½ per Cent. None ever sent.			

Rates of Passage Money between Guernsey and Jersey.

Cabin Passengers, each	0	5	0
Deck Passengers, each	0	2	6
Parcels of or under 30lbs. weight	0	1	0
Ditto, above 30lbs., ¼d. per lb.			

The above Rates to be paid in British Money, and the Freight of all Parcels must be paid for at the time they are received on board.

By command of his Lordship the Postmaster General,

J. AGNEW STEVENS,

Resident Agent for H. M. S. P.

No. 8.

No. 8.

Captain James Agnew Stevens, Lieut. R. N., Agent,

Weymouth, September 28, 1835.

Captain J. A. Stevens's Statement.

Has three steam vessels under his command for conveying the mails to Guernsey and Jersey, viz., the "Ivanhoe," "Flamer," and "Watersprite."

Captain Stevens has been twenty years as commander of a Post-office packet. He commanded a vessel of his own on the Holyhead and Falmouth stations. On the introduction of steam vessels by the Post-office, he was appointed to the "Royal Sovereign," on the Holyhead station, in the year 1821: remained for twelve years in command of steamers on that station, and was appointed agent at Weymouth in 1833. Captain Stevens, after such experience as a practical man, is of opinion that the power of the packets under his orders, viz., two engines of 30-horse power in each vessel are not sufficient. In corroboration of his own opinion he states that the companies running private steamers to Guernsey and Jersey have seen the necessity of giving additional power to their vessels, which were formerly of the same class as the Post-office steamers are now. The private companies have improved their vessels in this manner, although it is not necessary for them to have increased power as they do not run in the winter. Had the packets here been the private property of Captain Stevens, and upon the footing that the sailing vessel he formerly commanded was, he would have for his own interest improved them and made them at least equal in power to any of the private steamers running to the Channel Islands.

Jersey being a dry harbour makes it the more necessary to improve the vessels on this station, as it frequently occurs that from want of power to steam a-head in strong gales of wind, the packets are obliged to return to Weymouth, there being no safe anchorage among the islands in winter time. He is of opinion that if it were possible for the Post-office to make any arrangement with the Admiralty to enable the packets on this

Captain Stevens's
Statement.

station to be repaired at Portsmouth, it would be desirable. At present they are sent round to Holyhead, which, from its distance, the uncertainty of so long a voyage, and the necessity they are under of taking in coal at some intermediate harbour at a great expense, is very inconvenient.

In proof of this, amongst the bills for this quarter, Captain Stevens produces one from the Post-office Packet Agent, at Falmouth, wherein a charge of £2 is made for conveying £8 worth of coal to the "Flamer" Post-office packet, when on her way to Holyhead to be repaired; whereas, if the above arrangement with the Admiralty were made, the coal could have been procured from the store-ship at Falmouth, at the contract price. The expense attending sending vessels to Holyhead from so distant a port as Weymouth, might be avoided by having the repairs done at Portsmouth dock-yard, where the packets might be sent in a very short space of time and at a trifling expense, and might return to Weymouth in much less time than is occupied at present by repairing them at Holyhead.

The coals are supplied at Weymouth by contract. Advertisements for contracts for the supply of coals are issued yearly. The tenders are received by Captain Stevens, and transmitted to the Postmaster-General, who accepts whatever tender he thinks proper; that tender being, he believes, always the lowest.

He is most decidedly of opinion that, were he not a practical seaman, and well versed in steam navigation *particularly*, he could not possibly execute the duty of a packet agent with credit to himself or advantage to the public, nor could he possess that control over both the captains and engineers of the packets which the necessity of the service and the issue of stores requires.

Captain Stevens is also of opinion that, were the vessels on this station of superior power, the same number would afford a direct intercourse with France, touching, as they do at present, at Jersey and Guernsey. If this could be effected, he thinks that a considerable increase in the receipts of passengers would ensue, and a very great convenience would be afforded to the public by having a direct post communication from Weymouth to France. At present there is no possible means of preventing the conveyance of letters, by private individuals through Jersey to France, nor can it be expected that any precautions can prevent individuals from sending and receiving their correspondence in this manner, when, if put into the Post-office, it would have to pass through London, and reach its destination, *viâ* Dover. The three vessels at present upon the Weymouth station, if they had additional power in their engines, would be quite sufficient for maintaining a communication with the Channel Islands, and one of the ports on the French coast, twice a week.

No. 9.

Captain Stevens, Packet Agent.

Weymouth, October 1st, 1835.

St. Malo, or Granville, would be the most convenient port for the packets to go to in case of the establishment of a communication with France. Captain Stevens, although not much acquainted with the harbours of St. Malo or Granville, is convinced that there could not be the slightest difficulty of making these ports from April to October, and has but little doubt they might do so in the winter months also, more especially if the French Government was disposed to afford them such accommodation while in the harbours, as might be requisite for the safety of the vessels.

There are at present two merchant steamers from the islands to St. Malo, which are entirely supported by their receipts from passengers. Captain Stevens thinks that were the Post-office packets to go to St. Malo or Granville they would get the greater part, if not the whole, of the passengers, who go by these steamers, and that they would leave the station altogether. The additional expense to the Post-office would be very trifling,—merely the increased expenditure of coals and small stores proportionate to the additional number of hours the vessels would be at sea. This expense, he believes, would amount to nothing more than the price of eight bushels of coals for each hour the packets were in the passage between Jersey and St. Malo, and the charges for pilotage. The receipts from passengers, were there a communication from here to France, would, unquestionably, far exceed the additional expenditure, but the great advantages to the Post-office would arise from the increased facilities for correspondence with the south of France, and the postage which would accrue from this correspondence, which, as it is now conveyed by indirect means, adds nothing to the Revenue.

There is a very considerable intercourse and correspondence between Ireland and the Channel Islands, *viâ* Bristol and Weymouth. Were there a direct mail from here to Bristol it would be found a great convenience, and make a difference of many hours in the receipt of letters from Bristol.

Tuesday and Saturday are the days of the arrival of the mails at Weymouth. In the summer they very frequently get in before the hour at which the mails are made up for London. The mails, however, arriving by the packet on Saturday, are always sent up by the post of Sunday.

On Captain Stevens's appointment to the Weymouth station, the only accounts he received, connected with the packets, were contained in a private cash-book of the former agent. This book does not afford the means of ascertaining, with any degree of accuracy, the receipts or expenditure of the station previous to 1833, when he was appointed agent. He, consequently, cannot vouch for the correctness of any return connected with the receipts or expenditure, prior to the appointment. Since 1833, Captain Stevens, for his

No. 9.

Captain J. A. Stevens's
Statement.

own convenience and information, has, in addition to the accounts required by the Post-office, kept a book, in which the receipts and expenditure of each vessel are charged separately. It has been the practice hitherto for the agent to keep all the accounts at his own residence, there being no office connected with the establishment. Captain Stevens suggests that it might be of advantage for the agent to have an office furnished by Government, where all the accounts and documents connected with the station ought to be kept, and the business of the agent transacted. There is at present no person here to take charge of the stores or harbour boats. Were there a storekeeper, on a small salary, he could attend at this office, which should be attached to the storehouse, and be ready to give any information with respect to the packets.

(Signed) J. AGNEW STEVENS,
Agent for his Majesty's Steam Packets.

No. 9.

Captain J. A. Stevens' Statement.

No. 10.

Captain Robert White, of the "Watersprite."

Weymouth, 1st October 1835.

Has been in the service of the Government on the Weymouth station for the last thirty years, eleven years in a Revenue cruiser, and nineteen years in command of a Post-office packet. With the statement made by Captain Living he entirely agrees, and is convinced of the necessity of giving additional power to the Post-office packets. The expense ought not to be of great consideration; indeed he is assured, independent of every other advantage, that the saving in the coals consumed would more than compensate the expense of improving the packets.

Before Captain Stevens's appointment as agent upon this station a portion of the stores used to be purchased in Jersey by the captains, who received money from the agent to pay those bills. Captain Stevens never allows any purchases to be made there, nor any stores to be supplied, without an order from him to a tradesman at Weymouth.

At present a vast number of letters are carried over to the Channel Islands by the Southampton steamers. They have a regular office at Jersey for the receipt and delivery of letters and parcels.

All repairs for the packets are executed at Holyhead, under the control of the agent there. The commanders take their vessels round, and wait at Holyhead while they are under repair; but are not allowed to interfere in any way, or give directions with respect to the repairs, this being left entirely to the agent and resident engineer. Each vessel requires to go to Holyhead for repairs about once in four years. The length of time she is detained there varies from two to three months. The average time of going to and returning from Holyhead is ten days.

All the small repairs are performed at Weymouth, under the direction of the commanders and agent. The commanders certify that the repairs have been properly executed, and that the accounts are correct, before the agent pays the bills. The commanders give no such certificate at Holyhead.

The pay of the crews of the packets on this station is—

	£.	s.	
1st Mate	78	0	a-year.
2nd „	3	15	a-month.
Carpenter	3	10	„
Seamen	3	5	„
Steward1	14	„
Engineers	8	8	„
Stokers	4	4	„

In the private steamers the rate of pay is higher than in the Post-office packets. The crew of the Post-office packets receive no allowance for victualling, nor have they any perquisites in addition to their pay.

It is the practice of the private companies to take every possible means of giving publicity to their arrangements for the conveyance of passengers. The Southampton Company advertise their days of sailing constantly, and find it to be their interest to have agencies at Dublin, Liverpool, Bristol, London, and other places, to give information to passengers; while there are no means taken of making known the arrangements of the Post-office packets, which occasions a great loss of passengers. Captain White has frequently found that people from Bristol, who had gone to Jersey by Southampton, and returned by his vessel, had been entirely ignorant before their arrival at Jersey, that there were any means of getting across from Weymouth; although the distance from Bristol to Weymouth is miles less than to Southampton, and the sea voyage is above forty-five miles shorter.

(Signed) R. WHITE.

Captain William Living, of the "Flamer" Post-office Packet.

Weymouth, 29th September 1835.

Has been twenty-six years in the service of the Post-office; formerly commanded a vessel of his own in the Post-office service, on the Harwich station. He is of opinion that the

K

No. 11.

Captain Living's Statement.

No. 11.

Captain Living's
Statement

power of his vessel, and likewise of the others on this station, should be increased; and had they been the property of the captains, as the sailing-vessels formerly were, self-interest would have compelled them to alter the construction of the packets, and place greater power of engines in them, to enable them to compete with the private steamers from Southampton to the Channel Islands. Those private steamers were formerly of the same power and tonnage as the Post-office vessels are now; but have been considerably improved by the owners in construction and power of engines. Owing to the Post-office not keeping pace in the improvement of their vessels with private individuals, a serious loss has ensued by the diminution of receipts from passengers, as the vessels of superior power and speed are preferred; whereas, were the Post-office packets at all equal to the private steamers, the public would invariably give them the preference. The accounts on the Weymouth station show a small increase in the number of passengers; but it is far from being proportionate to the increased number of travellers from the English coast to the Channel Islands.

Captain Living admits it to be his opinion that were an arrangement made by the Post-office with the Admiralty, to enable the packets on this station to be repaired at Portsmouth Dock-yard, in place of going round to Holyhead, as they do at present, that it would be a great improvement. Were one of the packets so disabled as not to be able to proceed to Holyhead without undergoing considerable repairs at Weymouth, she might, if the repairs were done at Portsmouth, be towed there by one of the other steamers, without delaying the service.

Captain Living states that, from want of power in the packets on this station, they are frequently obliged to put back in the winter, not being able to save the tide, into Jersey, which is a dry harbour, and there being no safe anchorage about the island in bad weather.

The coals, when received on board from the contractor's warehouse, are weighed in the presence of the second mate, who enters the quantity received on board in a book, and likewise in the vessel's journal. Small stores are purchased by the agent when required for the packets. The passage money is collected by the steward, in presence of the first mate, who takes the names of the passengers. The money and list thus taken are forwarded to the agent in a report signed by the captain.

There being no examination of baggage, either on departure from Weymouth, or on arrival at Jersey or Guernsey, letters may be conveyed by the passengers. There is a French Post-office at Jersey, where any letters for France are received and forwarded on paying the postage to the nearest port in France.

When small stores are required for the vessels a demand is made by the captain, and signed by him; anything required for the engine-room is also signed by the engineer. This demand is presented to the agent, who judges as to whether the stores are necessary; and, if he thinks they are, he gives an order to one of the tradesmen employed by the packets to supply the articles comprised in the demand. The agent gives orders that everything received for the packets shall be weighed on board, and this order is strictly attended to by the mates. No stores are ever purchased at Jersey, except in cases of emergency. The captains are not allowed to go to any other tradesmen for their stores than those prescribed by the agent.

At present the Weymouth packets take but a small proportion of passengers going to the opposite coast of France, in consequence of their not proceeding further than Jersey; whereas the Southampton vessels, which ply to the Channel Islands, go also to Granville and St. Malo, which makes it more convenient for passengers going to France to take that route than the Weymouth.

(Signed) WILLIAM LIVING,
Commander of the "Flamer."

Captain *Comben*, of the "Ivanhoe," having read over the statement of Captain Living, expressed his entire approbation of the opinions he had expressed relative to the packets upon this station.

(Signed) W. COMBEN.

Statement of Mr.
Roberts and Mr.
Vivian.

No. 12.

Mr. *William Roberts*, Mate of the "Flamer," and Mr. *Jacob Vivian*, Mate of the "Ivanhoe."
Weymouth, 29th September 1835.

Have seen the statement of Captain Living, which appears, as far as their knowledge goes, to be perfectly correct.

They most strictly adhere to the orders of the agent with respect to seeing the stores weighed, and also that they are of the best quality. In case of any deficiency, either in the quantity or quality of the stores received on board, they would immediately report to the commanders. The mails are under the charge of the captains when on board; they are taken on board at Weymouth by the chief mate of the vessel next on duty, who takes a receipt for them, and gives it to the agent. At Guernsey they are taken on shore by the chief mate, and delivered to the postmaster, from whom they receive a small bag made up at Guernsey for Jersey. The postmaster at Guernsey does not give a receipt for the English mails. At Jersey the mails are landed by the carpenter, who is mailman, and he receives the mails made up at Jersey for Weymouth.

Any repairs executed at Weymouth are done under the immediate superintendence of the agent, commanders, and chief mates, and the workmen are always under their eye.

Passengers going direct to France prefer the Southampton packets, which convey them to Granville and St. Malo without landing.

There would be a great increase in the number of passengers by the Post-office packets were they in direct communication with the French ports; and there can be little doubt that the additional receipts from passengers would fully compensate for the expense which would be incurred in improving and giving increased power to the vessels, and also for the extra expense which would be required for their maintenance.

(Signed) WM. ROBERTS, Chief Mate of His Majesty's Packet "Flamer."
JACOB VIVIAN, Chief Mate of His Majesty's Packet "Ivanhoe."

No. 12.

Statement of Mr. Roberts and Mr. Vivian.

Mr. John Roberts, Second Mate of the "Flamer," and Mr. John Shorland, Second Mate of the "Ivanhoe."

Have read the above statement, which is perfectly correct. In case of the absence of the chief mates they have occasionally to perform their duties, and endeavour, as much as they can, to do so to the satisfaction of the agent and commanders, and strictly adhere to the orders which they receive respecting the receipt of stores.

(Signed) JOHN ROBERTS, Second Mate of His Majesty's Packet "Flamer."
JOHN SHORLAND, Second Mate of His Majesty's Packet "Ivanhoe."

No. 13.

Andrew Witham, Engineer of the "Flamer," and Richard Pearman, Engineer of the "Ivanhoe."

Weymouth, 29th Sept. 1835.

They are of opinion that the power of the engines in the packets they belong to is not sufficient: frequently in the winter season, or when blowing fresh, with a head sea, they can with great difficulty move the engines at all. They state that the private steam-vessels have been much improved, both by lengthening them and giving them increased power, so that the Post-office packets cannot possibly compete with them in speed. The private Companies continually alter and improve their vessels as the science of steam navigation advances; but the Post-office packets have remained without any improvement. They are of opinion that, with greater power in the engines, there would be less expense in consumption of coals, and stores of every description, from their being able to make the voyage much quicker, and that they would not be obliged, as they are at present, to return when the weather will not allow them to proceed. With greater power, *i. e.*, two forty-horse power engines, in lieu of two thirty-horse power which they have at present, they would seldom or ever be prevented going across the Channel.

They also state that those steamers which are obliged to take the ground in dry harbours should have the framing of the engines made particularly strong, as they are exposed to severe concussions, when the vessel is taking the ground, if there be any swell at the time, as is frequently the case in Jersey harbour during the winter months. The "Ivanhoe's" framing is at present cracked in several places, owing to this circumstance. If greater power is placed in the vessels, they should at the same time be lengthened forward, and made much sharper, by which means the strain on the engine in a heavy head sea would be considerably diminished, and tend to prolong the durability and reduce the wear and tear of both engines and vessels.

(Signed) ANDREW WITHAM, Engineer of the "Flamer."
RICHARD PEARMAN, Engineer of the "Ivanhoe."

Statement of Mr. Witham and Mr. Pearman.

No. 14.

Weymouth, 10th October 1835.

SIR,—I beg leave to submit a statement with respect to the post communication between Weymouth, Guernsey, and Jersey.

If the packets were to leave Weymouth for Guernsey and Jersey on Sunday evening instead of Saturday;—

Arrive at Weymouth on their return on Wednesday instead of Tuesday;—

Leave Weymouth for Guernsey and Jersey on Thursday, instead of Wednesday;—

Arrive at Weymouth on their return on Sunday instead of Saturday;—

It would advance their utility; as it is obvious their arrival at the islands on Sundays must retard business considerably, and, arriving at Weymouth on Saturday, a loss of time of one day arises with regard to London letters, when the packet is in time for Saturday's mail at Weymouth, which often occurs, and they are not delivered in London till Monday.

It is proper to remark, Jersey is a dry harbour, the packets lie aground, which subjects them to considerable delay after the mail is on board. Such actual loss of time can only be obviated by the packets being kept afloat, and it requires a good local knowledge of Jersey to point out the best position for that purpose. The force of these remarks would, I think, be still more strengthened if the packets proceeded onward to St. Malo, to afford a direct Government communication with the South of France, &c. As St. Malo is in a direct line from

K 2

No. 14.

Statement of Mr. Harvey.

No. 14.

Statement of Mr. Harvey.

Weymouth for that important object, there can be no doubt but that the increase of passengers *viâ* this route to the South of France would be immense, and correspondence considerably accelerated—a sure mode to produce revenue. *Vide* Map of France.

The harbour of St. Malo is large and well frequented; the trade is chiefly with England, Holland, Spain, the North of Europe, the Colonies, and in the Newfoundland fishery. Population 10,000; it is 45 miles NW. of Rennes, and 225 W. of Paris.

There is delay in letters to and from Guernsey, Jersey, and Bristol onwards to Ireland and the great manufacturing parts of England, there being no post communication to those parts except by the Exeter mail, on its route to London, as far as Salisbury, and thence by the mail passing through Salisbury for Bristol. To obviate this delay I see no other remedy but a communication in a direct line to Bristol from Weymouth, passing through some considerable towns on its route, thereby accommodating them also. I am not aware of the Bristol localities, but think a direct communication from this to Bristol, at seven or eight in the morning, would arrive in time there for the despatch of the Liverpool, and, perhaps, other material departures, on the same evening, instead of the morning following, *viâ* Salisbury, as at present.

I am, most respectfully, Sir,
Your obedient humble servant,
JOHN HARVEY, Postmaster.

J. R. Gardiner, Esq.

No. 15.

Mr. Eliot's Statement.

No. 15.

Weymouth Old Bank, 2d October 1835.

SIR,—I regret I was not within when you did me the favour of a call this morning. I can assure you there exists a great anxiety for the packet communication from Weymouth to be extended to some port on the opposite coast of France. This will facilitate the communication between the two countries, and be highly advantageous in correspondence. I can speak from my own knowledge, having several correspondents at Cherbourg, &c. I have not the least doubt but that the effect of this extension will add to the Revenue, both by passengers and letters.

If I can give you any further information I shall feel happy in doing so.

I have the honour to remain,
Your very obedient servant,

WM. ELIOT.

J. R. Gardiner, Esq.

No. 16.

Letter from Mr. Scott.

No. 16.

Weymouth, 2d October 1835.

SIR,—There being a considerable delay in the transmission of letters between the Channel Islands and all the great mercantile places in the North of England, as well as Ireland, I beg leave to submit the following remarks to the consideration of the Commissioners of Post-office Inquiry, by which I hope to show that the Revenue may be increased, and the public materially benefited, at little or no addition to the present expense. I will not enter into the great advantage that would accrue to the mercantile world, and, of consequence, to the Revenue, by His Majesty's packets continuing their voyage after landing their mails at Jersey, and going on to St. Malo's, thus opening a direct communication with the South of France, but will confine myself to the inland communication here; and would submit that His Majesty's packets generally arrive here on Saturday and Tuesday evenings, too late for the mail from this place; the letters consequently remain in the Post-office till the following afternoon, at four o'clock. They are then sent *viâ* Salisbury to Bristol, where they arrive at six o'clock in the morning, and are again detained till six in the evening, thus being delayed twenty-four hours; while there is a coach leaving this town every morning (Sundays excepted) at eight o'clock, arriving in Bristol at five in the afternoon, in time for the Liverpool, Birmingham, Manchester, and Glasgow mails. By sending the bag by this coach you not only place the northern part in the same advantageous position as the western and foreign mails, but confer a great benefit on every town north of the great western road (the letters for which make the same circuitous route by Salisbury), as well as open a much more direct communication with the South of France; and so persuaded am I of the benefit that would accrue to the public, as well as to the Revenue by this arrangement, that I respectfully offer to take the bag from this place free of all expense (save exemption from toll) for one twelvemonth, undertaking to deliver it in Bristol in time for the northern mails from thence; thus saving, as I before observed, twenty-four hours in the transmission of letters between this and the great manufacturing districts, as well as Ireland, and proportionably to every town north of Dorchester.

I am, Sir, with great respect,
Your most obedient servant,

(Signed)

G. P. SCOTT.

No. 17.

No. 17.

Statement of Mr.
Le Geyt.

October 1835.

SIR,—In obedience to your instructions I have the honour herewith to transmit to you the opinions of G. W. Le Geyt, Esq., postmaster of Jersey, in answer to certain questions proposed to him in pursuance of your directions.

Our time of staying in Jersey being, as agreed upon between the States of the Island and His Majesty's Postmaster-General, two midnights, leaves us only one clear day. I had therefore no opportunity, in addition to the accompanying report, of ascertaining the sentiments of the principal merchants and others, respecting their desire that a Government packet should be established between Jersey and the coast of France. The only gentleman with whom I had any conversation about it was Mr. Simonetz, a banker of the first respectability on the island, when, on introduction to him by Mr. Le Geyt for that purpose, and stating to him that it was the wish of the Honourable Commission of Post-office Inquiry to receive any information I could gather on that subject, he stated, that it had been long an object of great desire on the part of the merchants and residents of Jersey that Government would establish a packet between Jersey and the opposite coast of France; that St. Malo, for the purposes of correspondence and convenience of passengers, would be the most eligible port to send her to, for, although Granville was nearer, the communication with that place is trifling as compared with St. Malo; and Granville being eighty miles distant from St. Malo, it would not answer, in point of profit, to run the mail there.

From Jersey to Granville is 30 or 35 miles; from Jersey to St. Malo is 45 miles.

Mr. Simonetz does not doubt that a packet established between Jersey and St. Malo, having a proper understanding with the French Royal Post-office, as at Dover, would not only amply repay itself, but leave a considerable profit to Government.

Mr. S. further stated to me most particularly that any idea of continuing the packets from Weymouth on to France would be decidedly objectionable on the part of the Jersey interests, as the opinion is that it could not be done, even in summer, without endangering the regularity of their correspondence with England, and that in winter it could not be done at all, without totally deranging their present very satisfactory communication with England. Mr. S. further considers that to run between Jersey and St. Malo twice a-week, and, if found desirable, once a-week to Granville between post days, would be full employment for the packet proposed to be established, especially taking into account the dangerous navigation of that part of the French coast, the liability of frequent detention there by bad weather in winter time, and by fogs in summer, that do not extend to the islands.

He thinks, the vessel would have quite sufficient employ, and the attempting it by the Weymouth packets would produce inconveniences so desirable on the part of the Jersey merchants to be avoided.

Hoping the information I have been enabled to lay before you is in accordance with the intention of the Honourable Commission,

I have the honour to be, Sir,

Your most obedient humble servant,

(Signed)

WM. LIVING.

J. R. Gardiner, Esq.

No. 18.

No. 18.

G. W. Le Geyt, Esq.

Statement of
Mr. Le Geyt.

Weymouth, 10th October 1835.

Is of opinion that a great quantity of letters come from and go to London and other places in packages and parcels to this island, and *vice versa* by the Southampton steamers, that do not pass through his hands, and pay no postage whatever; and believes this evil likely to increase, as the opportunity of evading postage by such conveyances becomes more generally known.

Every passage-vessel has its office or receiving-house for letters, newspapers, and parcels, 1d. being charged by each receiving-house on a letter for taking it in; on those arriving from France 3d. or 4d. is charged at these houses.

The (so called) French Post-office at Jersey is a private establishment; that is, it is unknown as otherwise to the authorities in Jersey: they charge 1d. for each letter put in their office, and are empowered to receive the over-sea postage charged in France, and are therefore evidently in connexion with, and authorized by the French Post-office. At this place (receiving-house), with those who strongly resist, the payment of the penny for receiving it, is not persisted in. The private steam-boats and other vessels convey the letters, &c., so collected at all the receiving-houses to France. The over-sea postage from Jersey to France is charged at St. Malo for each single letter (by weight) at 4d. and *vice versa*, and may be paid at the French Post-office here both ways as above stated. He understands that after the arrival of a vessel at St. Malo the letters are not delivered until the arrival of the post from Paris, when they are all sent out for delivery together, thus occasionally causing a delay of twenty-four hours, excepting those letters directed *poste restante*, which may be had an hour after arrival.

Very few letters go through this (His Majesty's) Post-office to France, to the very serious injury of the Revenue, the trade and correspondence between the Channel Islands and France being very considerable. He is not at all surprised at this circumstance, as a letter put into

No. 18.

Statement of Mr.
Le Geyt.

this office for France must go by way of Weymouth, London, Dovor, and Calais, down to the opposite coast of France, within a few miles of Jersey.

Is of opinion, that if the postage paid to the French Post-office and other houses were paid at this office, it would well remunerate the Government for any additional expense incurred in this office, and that whether a packet were established between Jersey and France or not.

The merchants and other inhabitants of this island are desirous that a regular Government post should be established between Jersey and France, but thinks it would not be satisfactory that the packets from Weymouth should be so employed, and that it could not be done by them in the winter, and would produce detention in summer.

No. 19.

Letter of Capt.
Stevens.

No. 19.

Agent's Office, Weymouth, 11th March 1836.

SIR,—In compliance with your order of yesterday's date, "that I should report upon the mode in which the coal is issued to His Majesty's steam-packets on this station, and what checks there are on those issues," I beg leave to state that the day following the arrival of each packet, the commander causes her coal-boxes to be filled. In each coal-store is one of the patent weighing machines; the second mate of each packet is obliged to see every hundred-weight weighed and put into its bag, when it is conveyed instantly on board, and is never out of his sight. This officer keeps a book, which is brought to me monthly, in which he inserts the quantity and quality. In the monthly reports the commanders and engineers send another account, and I receive (and file) a printed docket, signed by the chief mate or master, containing the daily issue; in addition to which I am in the habit of frequently going to the store when least expected, and have directed the commanders to do the same. The quantity of coal received each voyage is inserted by the commanders in the copy of his journal that is transmitted by me to the General Post-office. I enclose the "Watersprite's coal-book," the "duplicate of her commander and engineer's report for February last," and the two latest printed dockets and receipts of issue in Jersey and Weymouth, which, if you do not require to keep, I should be glad to have returned.

I am, Sir, your very obedient servant,
(Signed) J. AGNEW STEVENS.

To J. R. Gardner, Esq., &c. &c.

No. 20.

Report of Captain
Stevens.

No. 20.

Agent's Office, Weymouth, 14th March 1836.

SIR,—In reply to your letter of the 12th instant, directing me "to state my opinion of the practicability and expediency of removing the packet station from Weymouth to Southampton," I beg leave to submit that there are three strong objections to Southampton:—

First, the increased distance from the Norman Islands, which, in round numbers, may be called one-third.

Second, the difficulty, I might perhaps say rather the impossibility, of attempting the Needle passage in the thick weather which generally accompanies southerly gales. This is a matter of the first importance, inasmuch as both the arrival and departure of the packet must be almost always in the dark during the winter months, from the absolute necessity of navigating between the islands in the day-time.

Third, that the western mail bringing the foreign correspondence direct from Falmouth arrives here now at 7 P. M., just in time to be forwarded by the packet, and, as it could not be at Southampton before midnight, would be delayed twenty-four hours; this mail is, to the commercial islanders, of more importance than even that from London.

As far as the despatch of the London mail is concerned, a nearer approach to the metropolis for a packet station is useless, inasmuch as the packet must leave the English coast the early part of the night, so as to ensure her leaving the following day to deal with the very intricate navigation of the islands, which, even with steam-vessels and the most practised pilots, cannot be attempted in the dark.

At Weymouth the London mail remains ten hours and a half before the packet sails, that is, from 10h. 30m. A. M. till 9 P. M.; the same delay must take place at Southampton, for, though the packet might sail from there at 5 instead of 9 P. M., the mail would have been there twelve hours; thus, as respects the London correspondence, the two ports may be said to be equal as to time. With that from the westward, and all the foreign mails, Weymouth has the advantage of twenty-four hours.

In point of distance from the islands, the advantage is evidently with Weymouth; its safe and free approach with regular soundings, plenty of water through the bay, which is always sheltered and smooth in the prevailing winds, render it practicable in any weather, giving it here again a manifest superiority over the other port, so that the only benefit to be fairly expected from the removal of the station would be an increase of passengers; but even here the apparent certainty of a railroad being very shortly constructed from Weymouth to Bath, joining the Great Western one, and thus communicating with all parts of England, promises even a greater revenue than the other port offers, and its direct intercourse with Ireland through Bristol, now very great, would be considerably increased.

The money received for the conveyance of passengers covered the whole expense of the packets and the station for the year 1834, except £1,022. 18s. 2d., and for the year 1835,

all but £1,377. 18s., leaving the packet postage of 3d. per letter clear, all but the above comparatively small sums; and this notwithstanding a violent opposition from Southampton, when the rival steam companies took passengers in the cabin for 2s. 6d.

I am quite convinced that, with larger and faster vessels, a very considerable revenue would be returned from passengers alone, especially if a French mail was sent this way.

I have to day made inquiry respecting the Bath and Weymouth railroad, and find that, though the scheme has but lately commenced, 8,500 shares are already said to be taken out of 10,000. No opposition is expected in Parliament, so that it appears certain to be constructed. This will lead to the building of a large pier harbour in Portland roads, or the considerable enlargement of Weymouth harbour.

Under all these circumstances I would very respectfully submit that the removal of the packet station to Southampton would not be attended with advantage to the public correspondence, or eventually to the revenue.

I have the honour to be, Sir,

Your very humble servant,

J. AGNEW STEVENS, R. N.

Agent for His Majesty's Steam-Packets.

J. R. Gardiner, Esq.

No. 20.
Report of Captain Stevens.

No. 21.

Agent's Office, Weymouth, 4th February 1836.

SIR,—In reply to your order of the 2d instant, "that I should report to you the state in which I found the accounts on my appointment to the Weymouth station, and whether there are any books of the former agent in my possession, or what became of them; also, whether Mr. Mackenzie, the late agent, was in trade."

I beg to state that I received a ledger (or general account with the General Post-office), containing, I believe, all the receipts and expenditure from the establishment of steam-packets here up to three months prior to Mr. Mackenzie's death, kept with great neatness and apparent good order, but in a manner that is unintelligible to me. I also received fourteen books of his daily journal, and one of his orders to the commanders—this was all.

On the 25th of June 1833, I stated to the General Post-office, that I had not received the letter-book of the station, when I was directed to apply to the widow for it, which I did; and, in reply, was told, by Mrs. Mackenzie, that "she had torn the books, and burned them and the papers before she left Weymouth." I enclose herewith a copy of her letter, which will more fully explain what she did.

In answer to your last query, I have heard that before the late Mr. Mackenzie was appointed to this agency he had been a merchant; but I believe that, during the whole period of his residence here, he was not embarked in any kind of trade.

I am, Sir, your very obedient servant,

J. AGNEW STEVENS,

Agent for His Majesty's Packets.

J. R. Gardiner, Esq.

No. 21.
Captain Stevens as to the Accounts at Weymouth.

2d July 1833.

SIR,—I very much regret that it is not in my power to comply with the request you made to me in your letter, which I received yesterday; but the truth is that, not knowing they would be of any use to you, I tore up the books, and burned them all before I left Weymouth. The letters were copies of what were sent up to the Postmaster-General, so that the originals are at the General Post-office, unless they have been destroyed. Had I remained at Weymouth, I would certainly have kept them, because they were written by my husband; but there were such multitudes of papers, that I did not know what to do with them, and felt myself under the necessity of burning them, which was a most painful office to me.

I am, Sir, your obedient servant,

E. A. MACKENZIE.

Captain Stevens.

The above is a true copy of the original letter.—J. AGNEW STEVENS.

Letter from the Widow of the late Agent.

No. 22.

British and Foreign Steam Navigation Company's Office, 8, Fenchurch Street,

21st January 1836.

MY LORDS,—I am instructed by the directors of the British and Foreign Steam Navigation Company, to state to your Lordships that having, since the 1st of January, placed a very superior steam-packet on the station from Southampton to Guernsey and Jersey, and which port they intend shortly to supply with more steam-packets, not only to the islands, but also to Havre-de-Grâce, the directors are quite ready and willing to enter immediately, at a fair remuneration, into a contract for the conveyance of the mails to the islands and South of France by way of St. Malo, as well as to Havre, twice in every week (or more often if this should be deemed desirable), by which arrangement a very material saving will be effected to the public, and a much greater facility will be afforded to the commercial interest, particularly if the suggestions should be adopted which they are ready to submit for consideration, and which the directors consider can be carried into effect without any difficulty.

I have the honour to be, my Lords,

Your Lordships' most obedient servant,

W. J. DE BUCK, Secretary.

To the Right Honourable the Lords Commissioners
on the Post-office Inquiry.

No. 22.
Letter from the Agent of the British and Foreign Steam Navigation Company.

No. 23.

Letter from the Secretary to the British and Foreign Steam Navigation Company.

No. 23.

British and Foreign Steam Navigation Company, 8, Fenchurch Street,

23d February 1836.

MY LORDS,—Referring to the memorial, dated the 21st ult., which I had the honour to address to your Lordships at the desire of the directors of the British and Foreign Steam Navigation Company, stating that the directors were willing and ready to enter, at a fair remuneration, into an immediate contract for the conveyance of the mails to Guernsey, Jersey, and St. Malo, as well as to Havre, from the port of Southampton, and considering that your Lordships might wish, in addition, to be furnished with more extended particulars with respect to the views of the Company, as also of the advantages and saving which would be derived and effected from transferring the conveyance of these mails to the Company's packets;

I am instructed by the directors to state to your Lordships that they are prepared, at a certain fixed price per annum, to undertake, by very superior, large, and powerful steam-packets, propelled by engines of from eighty to one hundred horses' power, (under regulations to be laid down by your Lordships, or by His Majesty's Postmaster-General,) twice a-week, the conveyance of the mails from Southampton to Guernsey and Jersey, carrying by the same packet a mail for St. Malo and its neighbourhood, as well as the South of France. Also, twice a-week, the mail for Havre, and France generally.

The directors, desirous of giving the public a much earlier receipt of the letters than has hitherto existed, beg to submit for your Lordships' consideration and adoption the following arrangements, *viz.* :—

The letters for Guernsey, Jersey, St. Malo, and South of France, to be received at the Post-office in St. Martin's-le-Grand until the hour of half-past eleven o'clock in the forenoon of every Tuesday and Friday.

The bags to be despatched from thence at 12 o'clock by a coach to be there ready.

The bags to be put on board at Southampton, and the packet to take her departure (weather permitting) at 9 o'clock in the evening.

By these arrangements the directors conceive the following advantages would result, *viz.* :—

First, a regular arrival of the mails (weather permitting) in Guernsey at 8 to 9 o'clock, in Jersey at 11 to 12 o'clock, in the mornings of Wednesday and Saturday, instead of, as now is the case, on Sunday and Thursday.

Secondly, the forwarding of the letters received from the country which arrive on the Tuesday and Friday mornings, instead of keeping them in London until 8 o'clock in the evening.

Independent of the above-mentioned advantages, there would also be accomplished the delivery of the letters for St. Malo in the summer months, generally on Wednesday and Saturday evenings, and in the winter months on Thursday and Sunday mornings, whereby the transit would be effected to St. Malo, in thirty-six to forty-eight hours at latest, which now is not done in less than five days, the letters at present being despatched by Calais, from whence they are forwarded to Paris.

This latter advantage (a saving of three days) would also result to a conveyance of a mail twice a-week from Southampton to Havre and South of France, which the directors submit should be made up in London every Monday and Thursday, or every Wednesday and Saturday evenings, at 7 o'clock, and, being forwarded by the Southampton mail, might, by a little extra speed, be put on board the packet at half-past 4 or 5 o'clock on the following morning, so as to enable the captain to take his departure by 5 o'clock at latest.

By such an arrangement the letters would be delivered in Havre on the Tuesday and Friday evening, or Thursday and Sunday evening, being within twenty-four hours from London.

In Rouen, and other places in the neighbourhood, on the morning of the second day from London.

And in Paris in the evening of the second day, or, as now is the case *viâ* Calais, the morning of the third day.

In addition to affording to the public an increased and more expeditious mode of conveyance, the directors also believe a very considerable saving will be effected to the Government, it being calculated (independent of the outlay of the three packets now on the Weymouth station) that the annual cost and charge of the present establishment cannot be less than £6,000, if as little, whereas by transferring the same line to the company (although the directors do not consider that they are now called upon to state their terms) the charge would be much less.

To give additional advantages to the islands of Guernsey and Jersey, as well as to the parties therewith connected, the directors suggest for your Lordships' consideration that the return voyage from Jersey and Guernsey should be every Tuesday night or Wednesday morning, and Saturday night or Sunday morning.

I have the honour to be, my Lords,

Your Lordships' most obedient servant,

W. J. DE BUCK, Secretary.

*To the Right Honourable the Lords Commissioners
on the Post-office Inquiry.*

APPENDIX (D.)—Milford.

No. 1.

A LIST of the Persons employed in His Majesty's Post-office Establishment at Milford.

No. 1.

Persons employed in the Post-office Establishment at Milford.

Names.	Quality.	Rate of Pay.	Allowance.	
Thomas Bevis, Esq.	Agent	£. s. d. 250 0 0 per annum . . .	£10 per annum for stationery.	
Thomas Edwards	Clerk	80 0 0 do.		
William Davies . . .	Storekeeper, Milford . . .	4 4 0 per lunar month.		
John Devereux . . .	Ditto, Dunmore . . .	0 12 0 per week.		
William Minchin . . .	Resident Engineer . . .	160 0 0 per annum.		
John Lloyd . . .	Boilerman	8 8 0 per lunar month.		
Ben John . . .	Ditto	4 0 0 do.		
John Griffiths . . .	Smith	4 16 0 do.		
John Field . . .	Carpenter	4 16 0 do.		
Peter Lexter . . .	Chief Mail Boatman . . .	1 1 0 per week.		
Thomas John . . .	Mail Boatman . . .	0 17 6 do.		
John Rixon . . .	Ditto	0 17 6 do.		
William Allen . . .	Ditto	0 17 6 do.		
Thomas Glody . . .	Chief Mail Boatman . . .	0 16 0 do.		
Andrew Murphy . . .	Mail Boatman . . .	0 13 0 do.		
Jeffrey Power . . .	Ditto	0 13 0 do.		
Edmund Power . . .	Ditto	0 13 0 do.		
Thomas Glody . . .	Ditto	0 13 0 do.		
William Evans . . .	Packet Sweep	0 12 0 do.		
Thomas Rixon . . .	Labourer	0 12 0 do.		
Thomas Williams . . .	Ditto	0 12 0 do.		
George Williams . . .	Ditto	0 12 0 do.		
William Thomas . . .	Ditto	0 12 0 do.		
Michael Bowen . . .	Ditto	0 12 0 do.		
<i>On board "Crocodile."</i>				
Edward Hallands . . .	Commander	300 0 0 per annum.	Two pounds of beef and one pound of bread each man per diem.	
Michael Merritt . . .	Mate	4 0 0 per lunar month.		
John James . . .	Second ditto	2 10 0 do.		
John Garvey . . .	Carpenter	2 15 0 do.		
John Flen . . .	Seamen	2 5 0 do.		
Thomas Llewellyn				
Levy Llewellyn				
James Morrice . . .				
William Mathias . . .				
John Edwards . . .	Steward	2 0 0 do.		£12 per annum in lieu of victualling.
Joseph Flarty . . .				
John Tasker . . .	Fireman	4 16 0 do.	Half-pint of whiskey each per diem.	
James Evans . . .	Ditto	4 16 0 do.		
William Fleming . . .	Engineer	130 0 0 per annum.		
<i>On board "Sibyl."</i>				
John Roberts . . .	Commander	300 0 0 per annum.	Two pounds of beef and one pound of bread each man per diem.	
Peter Rundle . . .	Mate	4 0 0 per lunar month.		
James Price . . .	Second ditto	2 10 0 do.		
William Bud . . .	Carpenter	2 15 0 do.		
William John . . .	Seamen	2 5 do.		
James Hendemon . . .				
John Glody . . .				
John Flen . . .				
Henry Miller . . .				
James Randle . . .	Steward	2 0 0 do.		£12 per annum in lieu of victualling.
John Wade . . .				
Richard Pritchard . . .	Fireman	4 16 0 do.	Half-pint of whiskey each man per day.	
James Howells . . .	Ditto	4 16 0 do.		
John Lewkern . . .	Engineer	130 0 0 per annum.		
<i>On board "Vixen."</i>				
William D. Evans . . .	Commander	300 0 0 per annum.	Two pounds of beef and one pound of bread allowed each man per diem.	
William Davies . . .	Mate	4 0 0 per lunar month.		
Richard Flin . . .	Ditto	2 10 0 do.		
John Lewis . . .	Seamen	2 5 0 do.		
Thomas Harries . . .				
Thomas Williams . . .				
Patrick English . . .				
James Richards . . .				
James Thomas . . .	Carpenter	2 15 0 do.		£12 per annum in lieu of victuals.
Richard Stiles . . .				
John Andrews . . .	Steward	2 0 0 do.	Half-pint of whiskey each per diem.	
John Griffiths . . .	Fireman	4 16 0 do.		
James Davies . . .	Ditto	4 16 0 do.		
William M'Donald . . .	Engineer	130 0 0 per annum.

No. 9.

Capt. Bevis, R.N.
Packet Agent,
Milford,
9th October 1835.

No. 9.

Captain Bevis, R.N., Packet Agent, Milford,

Milford, 9th October, 1835.

Was appointed to the Milford station about a month ago, on the removal of the former agent, Captain Chappell, to Liverpool.

On his coming here he was particularly struck with the irregular manner in which the stores are supplied for the packets. The system at present adopted Captain Bevis considers the very worst possible in such a situation as this, where, from the little trade carried on, no competition can be expected.

He feels assured that, if the stores were contracted for, they would be supplied full 30 per cent. under the present cost, and the quality would be better.

Putting economy altogether out of the question, Captain Bevis objects most strongly to getting the stores from a tradesman here, and always from the same person, inasmuch as it affords room for speculation, and puts the officers of the establishment in contact with the tradesmen employed in a manner which ought not to exist in a Government department.

The coals used here are always Scotch; there is no contract for supplying them. The agent purchases a cargo when he thinks proper, and gets them upon the most reasonable terms he can. The coals are laid into store at Dunmore, upon the same terms as at Milford. The average price per ton, in the year 1834, was 14s. 5d., including all expense of laying them into store.

Until within the last three years, tallow, oil, cordage, and other small stores, were brought from Liverpool. The postmaster there, purchased them, and sent them round to Milford. There were no fixed prices. Since 1832 a tradesman has been employed here for the supply of these stores, under the authority of the Post-office. The same man has always been employed by the agent. At the beginning of last year another tradesman applied to the agent for leave to tender for the supply of these stores, and he was allowed to send in a list of prices, which was not, however, accepted by the Post-office. If the present system for the supply of stores is continued, Captain Bevis proposes, at the expiration of the present year, to advertise for all species of stores, and to endeavour to get tenders from Bristol and London, and not to confine the tenders to tradesmen at Milford, who, from the limited nature of their business, are unable to supply the stores on moderate terms.

From the vicinity of the dock-yard at Pembroke, Captain Bevis is assured that repairs would be much cheaper, and better executed there, than at Holyhead. Were there any arrangement made with the Admiralty, the stores might also be supplied from the dock-yard, which would be much preferable to the present mode, and diminish considerably the expenditure of the station.

The present scale of fares by the Milford packets is—

Cabin passengers	£1 10 0
Deck	0 5 0

There has been no alteration in this scale since the first establishment of the steamers upon the station. The receipts have greatly diminished in consequence of the very heavy expense of travelling from Bristol to Milford, and the inconvenience of embarking in the packets here. The fares to Dunmore from Milford are also complained of by the passengers as being too high.

From Bristol to Waterford the fare by the large merchant steamers is only £2. 2s. The fare by the mail from Bristol to Milford is £3. 3s.; and the passage across to Dunmore £1. 10s.

In each of the packets there are nine of the crew victualled, viz., three mates, one carpenter, and five seamen. They are allowed 2lbs. of beef, and 1lb. of bread each per day. The provisions are supplied by contract; tenders are advertised for, and received by the agent every year. Those tenders are transmitted to the Post-office, and the Postmaster-General accepts whatever tender he thinks proper. The tenders are sent in sealed, but opened by the agent before they are sent up to the Post-office. The average price of beef for the last three years has been £1. 13s. 4d. per cwt., and of bread 19s. 4d. The provisions supplied are of the best quality, and, if any complaints are made, the agent desires the commanders to report to him as to whether there is any ground for the complaints.

The stores are all under the superintendence of the storekeeper, who lives on board the store-ship. It is his duty to see that the proper quantity of coals is delivered on board, and to keep an account of every thing he issues for the use of the packets. The storekeeper was formerly first mate of the "Sovereign," and was promoted by the agent some years ago. The bills for coals and other stores, are compared with the receipts which the storekeeper gives, before they are paid by the agent.

(Signed) THOMAS BEVIS.

No. 10.

Capt. E. Hallands,
Commander of the
"Crocodile" Steam-
Packet,
7th October 1835.

No. 10.

Captain E. Hallands, Commander of the "Crocodile" Steam-Packet.

Milford, 7th October, 1835.

The "Crocodile" is 237 tons burthen, and has two 40-horse-power engines. Captain Hallands is of opinion that the Milford station, from being more exposed to the Western Ocean, requires at least as powerful packets as the Liverpool station. The Liverpool packets are greatly

superior in dimensions and power. They are 300 tons burthen, and have two engines, of 75-horse power, each.

Captain Hallands is aware of complaints being made by passengers of the difficulty of embarking and disembarking at Milford, which is always done by a boat, and he thinks that were the packets to run up to Hobbs' Point pier, where they could always lie afloat, it would be attended with great accommodation to the passengers, particularly to those who had horses or carriages. Hobbs' Point pier is close to the naval dock-yard, and were an arrangement made with the Admiralty, by the Post-office, for repairing the packets at the dock-yard, a great saving of time and expense, now incurred by the packets being sent to Holyhead for repairs, would ensue. The pier of Hobbs' Point should be faced by upright spars of wood, filled in with furze, as fenders for the packets, which has been found useful at Holyhead.

Captain Hallands, after an experience of 16 years on the Milford station in command of packets, feels confident that, were the packets to take the mails direct from Waterford to Portished, near Bristol, the great increase of passengers which would naturally follow such an arrangement would pay the expenses, as well as greatly accelerate the intercourse between the South of Ireland and England. Were the packets to run direct from Waterford to Portished, the same class of vessel now employed on the Liverpool and Dublin station would answer remarkably well, if the draught of water did not exceed nine feet.

Very great convenience arises from having a hulk at Milford, with coal and small stores on board, to supply the packets with anything they may require. They always run alongside this store-ship on their arrival, and are supplied by the storekeeper (who lives on board) with what they want. The coals, tallow, and oil, are supplied at the captains' request; other small stores are only issued by an order from the agent. The coals thus supplied are kept ready on the store-ship's decks, and measured into the packet by the storekeeper and his labourers as soon as the vessel arrives. The storekeeper delivers to the captain the weight of the coal thus issued, to be inserted in the ship's log. A copy of the log is sent to the agent at the end of each voyage.

No officer of the packet attends to the weighing or measuring of the coal thus supplied, that being left entirely to the storekeeper. When small stores are required Captain Hallands sends a demand to the agent for his approval; this demand, when approved by the agent, is taken by the first mate to the storekeeper or tradesman, as the case may require, and he gets the articles, leaving the demand with the person who supplies him. The mate never gives any receipt either to the storekeeper or tradesman for the stores thus received. The average value of stores under the charge of the storekeeper may be estimated at £1,000. The collection of the passage money is left entirely to the steward, who pays it to the agent at the end of the voyage, delivering at the same time a list of the names of the passengers conveyed by the packets.

The small stores required for the packets have always been supplied by the same person. The captains have nothing to do with the prices charged.

When the engineer requires any oil or tallow he receives the quantity he desires from the storekeeper. No written demand is made for oil, tallow, or coals. The written demands are only used for other articles. The storekeeper is appointed by the agent. The present storekeeper was mate of the "Sovereign" before his promotion; his salary was then £4 a-month, with victualling. He receives no allowance for victualling as storekeeper.

(Signed) E. HALLANDS.

No. 11.

Captain *John Roberts* of the "Sibyl" Packet,

Milford, 10 October, 1835.

Has been 17 years commander of a Post-office packet on the Milford station; formerly had a sailing packet of his own, but on the introduction, of steam-vessels by the Post-office, in 1824, was appointed to command the "Aladdin." The Milford station, from being more exposed to the Western Ocean than either Liverpool or Holyhead, ought to have vessels of a class and power at least equal to any of the packets employed on the other stations; whereas the vessels on the Milford station are very inferior to those on the Liverpool and Holyhead stations. The Sibyl is 237 tons burthen, and has two engines of 40-horse power each; but she is not calculated for the service.

Captain Roberts states that, if he had an interest in the steamers, as he formerly had in the sailing packets, he would, for the sake of economy, have given them greater power, and altered their construction if he could have afforded it.

He is of opinion that, if vessels of double the power of the present ones were placed on the Milford station, they might, from being able to perform the voyage always during the day, be able to go direct to Waterford, and save one-third of the time now occupied in conveying the mails across the Channel. Should any circumstance prevent the packet getting up to Waterford, which would seldom or ever occur with a vessel of the class recommended by Captain Roberts, then the mails might be landed at Dunmore or Passage.

From the great facility of embarking and disembarking passengers at all times of tide at Hobbs' Point Captain Roberts feels assured that changing the station from Milford to that place will be attended with great accommodation to the public, and an increase to the Revenue from passage money. He has frequently heard passengers complain of the

ber 1835.

inconvenience of Milford, from being obliged to land always in boats; and he attributes the decrease of passengers by the Milford route to that circumstance. By adopting Hobbs' Point, the inconvenience will cease.

Captain Roberts is of opinion that, could an arrangement be made by the Post-office with the Admiralty for repairing the steam-packets on this station at the naval dock-yard, it would be a great advantage, and save the time and expense of sending them to Holyhead, as they do at present.

When Hobbs' Point is made use of as a packet station it will be necessary to place two small light-vessels, one on the Carr Rock, and the other on the Wear Point; and in the event of the packet not arriving, during the day (which, if superior vessels be adopted, he does not anticipate) the light should be shown until her arrival, and on her departure. These light-vessels should likewise be provided with instruments to sound in foggy weather.

Greater facility and despatch would be obtained by having a vessel with the coal, stores, &c., on board, for the packets to run alongside of, than if those articles were on shore in store-houses; and he thinks that, as the pier at Hobbs' Point is not, from the direction given it, perfectly safe to lie alongside of in heavy north-west gales, the present store-vessel, the "Tortoise," should be moored off the west end of Hobbs' Point, and continued in her present employment. He thinks that she might be safely moored in such a situation, and that the packets might always lie alongside of her, to receive their coal, which being more protected from the weather, and less liable to deterioration than if it were in a coal-yard, would be very superior.

No. 12.

Captain Hammond,
Commander of the
"Aladdin," Milford,
14th Nov. 1835.

No. 12.

Captain *Hammond*, Commander of the "Aladdin," Milford.

Holyhead, 10th Nov. 1835.

The "Aladdin" is now under repair at Holyhead, getting a new crank for the starboard engine; a cross-bar to the connecting rod of the larboard engine is also about to be fitted. She arrived here on Tuesday, the 10th November. The "Aladdin" has been obliged to come to Holyhead for repairs three times within the last six weeks. In the beginning of October she was sent round for the purpose of having a cross-bar fitted for the larboard engine; he got at the same time a new crank and was under repair altogether a fortnight. On her voyage back to Milford the pedestal of the weigh-shaft broke, upon which Captain Hammond returned to Holyhead; one engine being in consequence of this accident completely crippled, he was obliged to disconnect the engines.

On arriving at Holyhead it was necessary to send to Liverpool for a new pedestal, which arrived here from Kingstown, having been conveyed there, and thence home, by the Post-office packets. After this second repair Captain Hammond was enabled to sail again for Milford on 21st of October. After arriving at Milford the "Aladdin" performed three voyages to and from Dunmore, when it was discovered that there was a fracture in the cross head of the starboard connecting rod. Having made a report of this to Captain Bevis, the agent, at Milford, Captain Hammond was directed to proceed a third time to Holyhead, in order to get a new cross-head. He left Milford November 1, and arrived at Holyhead November 2.

If there were any spare articles, such as the "Aladdin" has required, at Milford, there is every facility for having them replaced there. Connected with the establishment there is a resident engineer, with several workmen under him. In the early part of this year the "Aladdin" was at Holyhead for about six weeks, having new boilers put in. During that time Captain Hammond returned to the Milford station, and took his share of the duty there in the "Royal Sovereign." The boilers of the "Aladdin" were made at Holyhead; the former ones, which lasted for three years, were also made there; during the latter part of the time they required constant repair.

(Signed)

JOHN HAMMOND.

No. 13.

Capt. J. Hammond,
Commander of the
"Aladdin," Milford,
17th Nov. 1835.

No. 13.

Captain *John Hammond*, Commander of the "Aladdin" Post-office Packet, Milford Station.

Holyhead, 17th Nov. 1835.

Has been in the Post-office service 21 years; 13 years as captain, and has commanded a steam-packet three years on the Milford station. The "Aladdin" is the only vessel on the Milford station that has increased cylinders, rendering her equal to 100-horse power.

He considers that the Milford station, from being more exposed to the prevailing south-west winds and the sea from the Atlantic, should have a very superior class of vessels to any of the other stations, whereas the other steam-vessels on the Milford station are inferior in power to those at Holyhead and Liverpool. The "Aladdin" has, as he represented previously, been under repair at various times at Holyhead since the 2d of October.

He is of opinion that, from the confinement of Holyhead harbour, and the distance it is from Milford, it would be a very great advantage if any arrangement could be made with the Admiralty to have the Milford packets repaired at Pembroke dock-yard.

All packets sent to Holyhead to take in new boilers must be subject to take the ground

alongside the pier where it is dry at low water, and in bad weather they must necessarily strike hard. This would be avoided at Pembroke, where the packets could always lie afloat.

Captain Hammond has had no experience in the navigation of Milford Haven as far up as Hobbs's Point, and does not feel competent to give an opinion of it, but he has frequently heard passengers express great dissatisfaction at the inconvenience of embarking and disembarking at Milford. This inconvenience would be obviated were the packets to leave Hobbs's Point pier.

He is not acquainted with Waterford river, but if the packets were to go up to Waterford quay it would be a very great convenience to the passengers. Dunmore harbour is, in Captain Hammond's opinion, too confined to admit vessels of a much larger class than the present ones; and were steamers of 160 or 200-horse power employed on the Milford station, from Hobbs's Point to Waterford quay, a very great acceleration would follow in conveying the mails, and much more inducement for passengers to take that route.

On the Milford station the engineers are placed entirely under the orders of the commanders of the packets, and must obey any command which they give, of whatever nature it may be. When Captain Hammond first took the command of a steamer the agent at Milford came on board, and desired the engineer to obey him in every respect.

No. 14.

Mr. William Davies, Storekeeper.

Milford, October 9, 1835.

Was appointed storekeeper in 1825, when a vessel was obtained for a depôt for coals and other stores required for the packets. Previous to that time the stores were kept on shore, and shipped at considerable expense, attended with great waste.

Mr. Davies, before his appointment as storekeeper, was mate of one of the Post-office packets. His salary was then £4 per lunar month, exclusive of victualling, which he considered equal to £1. 8s. additional. Upon his appointment, Mr. Davies had no idea that the allowance of provisions was to be discontinued, otherwise he would never have accepted the responsible situation which he now holds, while the salary is only 1s. a-week more than he had as mate. In addition to the responsibility the duties are also very onerous, and continually increasing. He is obliged to be constantly on board the store ship, and lives there with his wife and family, being obliged to get all his provisions from the shore at his own expense. No person lives on board excepting Mr. Davies and his family, but one of the labourers is generally on board to assist the storekeeper.

Since 1827 the repairs of the packets have been done on board the hulk, and all the smiths, boiler-makers, and other workmen, are under the control of Mr. Davies. The head boiler-maker has a salary of £2. 2s. a-week, and the smith and carpenter £1. 4s. a-week each. He feels great difficulty in maintaining any control over men whose salaries are so much larger than his own. He has frequently applied for an increase of salary, and has only been induced to continue in his present situation from the hope held out to him of having it increased. When the clerkship was last vacant, he applied for that situation, and would be very glad now, with an additional salary, to perform the clerk's duties (which he does not consider very onerous) in addition to those of storekeeper.

The average value of stores under the charge of Mr. Davies is about £2,000. The receipt and issue of them are entirely intrusted to him, and he is the only person that keeps any check of the quantities received on board and issued. He always supplies whatever is contained in the demands of the commanders and engineers; those demands he keeps as vouchers for the issues. He does not take any other receipt of the stores issued. The commanders do not receive any note of the stores delivered to them; they know the quantities they receive from the demands which they present.

Mr. Davies thinks it would be much better for them to have all their stores from the dock-yard, as they would then be of the best quality, and they would be sure of having the proper quantity delivered on board.

An accurate account is kept not only of all the stores supplied, but of every expenditure however trifling, and charged to each vessel separately; there can, therefore, be no difficulty in ascertaining the exact amount which each vessel costs for maintenance, tear and wear, &c.

If any of the stores are not approved of, Mr. Davies uses his discretion in returning them to the tradesmen. When a cargo of coals is delivered, he is the only person who superintends the delivery, and reports to the agent the quantity he takes on board, who then pays the bill.

(Signed) W. DAVIES, Storekeeper.

John Devereux,
Storekeeper,
October 14, 1835.

No. 15.

John Devereux,
Storekeeper,
October 14, 1835.

He is of opinion that there would be no difficulty for a steam-vessel, drawing 10 feet of water, to proceed day or night to Waterford, if conducted by a person acquainted with the river.

He is not aware of what the contract price of the coal at Dunmore is. Sevenpence per ton is paid by him to a contractor at Dunmore for putting the coal into store, and re-shipping it into the packet. There are 21 coal store-houses on the pier, which would contain about 2,000 tons of coal: there are generally from 1,000 to 1,500 tons in store, besides small stores for the occasional use of the packets.

The storekeeper has a boat's crew of five men under him for attending on the packets.

When coals arrive at Dunmore in the colliers, Mr. Devereux sees them weighed. In case two vessels are discharging at the same time, the chief boatman attends on board the second. There are no custom-house officers at Dunmore, nor are there any meters. The storekeeper is the only person to check the amount of coals received or delivered. He sends a monthly account of his receipts and expenditure to the agent at Milford, and also a quarterly account, showing the whole expenditure during the quarter, and the quantity remaining in store. The storekeeper pays the whole expense of the Dunmore establishment, receiving the money, for that purpose, from the agent at Milford. His salary is 12s. a-week; he has, in addition to this, 1s. a-day from the superannuation fund, and a small cottage allowed him rent free. He is neither victualled nor allowed coal or candles, nor has he any other emolument whatever.

The boat's crew, who are under the storekeeper and paid by him, have 13s. a-week each. The chief boatman has 16s. a-week. The boatmen are generally appointed on the recommendation of the storekeeper. He pays about £1,000 a-year for the expenses at Dunmore, and has generally about £1,000 worth of stores in his charge.

To the Sub-Commissioners of the Post-office Packet Inquiry.

Liverpool, January 10, 1836.

Captain E. Chappell, late Agent, Milford, 10th Jan. 1836, requesting to be examined as to his Accounts.

Having held the superintendence as agent of His Majesty's Post-office Packets at Milford from the 8th day of May 1826 to the 27th day of August 1835, I am, of course, responsible for the efficient, economical, and proper management of that establishment during such period; but having been removed from that station to Liverpool at the moment when the Sub-Commissioners of Post-office Packet Inquiry commenced their investigation, I was prevented from offering any explanation or evidence as to the nature of my own proceedings, or the fidelity of my own accounts. Under such circumstances, it is indispensable to my character as a public officer that I should request, earnestly and respectfully, to be examined by the said Sub-Commissioners, during their stay at Liverpool, should any question have arisen as to the integrity or propriety of my transactions during the nine years I was agent of His Majesty's packets at Milford.

Should the Sub-Commissioners, however, deem it inexpedient to grant this humble request, I have only further to solicit that this my formal claim to be so examined may be attached to the report of their proceedings.

E. CHAPPELL, Agent to His Majesty's Packets.

Letter from Captain Evans to Lord Duncannon, with Report on Waterford River.

14th October, 1835.

Letter from Capt. Evans to Lord Duncannon, with Report on Waterford River, 14th October 1835.

MY LORD,—In obedience to your Lordship's instructions, I have examined the chart of Waterford river; and I have the honour to transmit a copy of the report which I have made to the Harbour Commissioners.

Dunmore harbour being very contracted, and not capable of admitting a larger class of packets than the very inferior ones now employed on the Milford and Dunmore station, I think it would be worthy of the consideration of the Commissioners to inquire into the practicability of conveying the mails, in a superior class of packet, direct from the new pier at Hobbs's Point to Waterford quay.

Your Lordship will perceive, from the statement of Captain Roberts, one of the most experienced commanders on that station, what a very great saving of time, and convenience to the public, would ensue from this change; and I perfectly coincide with Captain Roberts in thinking that such an arrangement would considerably increase the revenue from passage-money.

I have the honour to be, my Lord,

Your Lordship's obedient humble servant,
(Signed) GEORGE EVANS, R. N.

The Viscount Duncannon,
&c. &c. &c.

No. 18.

To the Right Honourable Lord *Duncannon*.

MY LORD,—Having carefully examined and sounded Milford Haven and Waterford river, with a view of ascertaining whether the mails might be conveyed direct from the new pier at Hobbs's Point to Waterford quay, I have the honour to transmit, for the information of the Commissioners, the result of my investigation.

It appears from all previous reports, and the evidence taken, to be generally acknowledged that the packets on the Milford station are very deficient in tonnage and power; and it is equally manifest that Dunmore harbour will not admit vessels of a superior class to those now employed.

It is, therefore, a subject of some importance, from the enormous expense of the present establishment, to see if that expense might not be diminished by giving greater accommodation to the public, as well as expediting the conveyance both of passengers and letters.

Perhaps I may be allowed here to remark that the most effective manner of accomplishing this desirable object, and of avoiding the difficulties of the present line from its exposure to the whole volume of the Atlantic during the prevailing gales, appears to have been entirely overlooked, in not having originally selected Dale road on the west side of Milford Haven, and some convenient place on the coast of Ireland to the north of the Tusker, as the stations in lieu of Milford and Dunmore; but since the mistake has been made, I shall confine my observations to those places which can immediately be made available.

The new pier at Hobbs's Point is well calculated to obviate the difficulties and inconvenience hitherto attendant on embarking at Milford, and its vicinity to Paterdock-yard is of great importance.

When the new road, through South Wales, to that pier is finished, every accommodation can be afforded to the public, as well as a great saving of time in the arrival of the mails.

Packets of the first class can always lie afloat at Hobbs's Point, there being 16 feet alongside the pier at low water spring tides.

Before making use of Hobbs's Point as a packet station, it will be necessary to place two light vessels in the channel between it and Milford, one off the Carr rocks, the other off the Weare Point; both light vessels should be provided with gongs, or bells, to be used in foggy weather, for the guidance of merchant-vessels as well as the packets.

The description of vessel best calculated for the Milford station as a packet would be one of about 450 tons, and 180 horse power, built with a long flat floor, sharp entrance, fine run, and constructed not to draw more than 10 feet water: such a vessel would make the voyage from Hobbs's Point to Waterford quay on an average of 11 hours throughout the year.

The packet would leave Hobbs's Point about midnight, therefore the navigation of Waterford river would be always performed in day-light. Should thick foggy weather detain the packet going up the river, the mails could be landed and sent on, but I do not consider that such an event would occur more frequently than the mail-coach might be obstructed by snow.

In conclusion I beg leave to observe that the certainty and regularity which would be obtained by powerful packets performing the voyage, would considerably increase the correspondence; and the convenience afforded to the public, by having vessels of such description running from Waterford quay to Hobbs's Point, would, I am confident, from the increase of passengers, considerably diminish, if not entirely cover, the expenses of the station.

With reference to the practicability of navigating Waterford river with powerful steamers, I beg leave to refer your Lordship to my report on the late survey of that river by Messrs. Carter and St. Leger, which shows that there is always 14 feet at low water in the channel over the flats, and I may here observe that whenever there is a heavy sea the wind must blow right into the river, and increase the depth of water at least two feet.

GEORGE EVANS, Commander, R.N.

No. 18.

Captain Evans's Report upon Packet Communications between Milford and Dunmore, and Hobbs's Point and Waterford Quay.

No. 19.

Report and Observations of Captain *George Evans* on the Chart of Waterford Harbour, constructed by Messrs. *Carter* and *St. Leger*.

Waterford, October 14, 1835.

SIR,—Having been requested by the Chamber of Commerce, and the Harbour Commissioners, to inform them of the result of my observations on the harbour of Waterford, and my opinion as to the accuracy of Messrs. Carter and St. Leger's chart, I feel much pleasure in communicating to them, by permission of the Commissioners of the Post-office Inquiry, that I found the chart of Waterford harbour, constructed by Messrs. Carter and St. Leger, perfectly correct, as far as a very limited time admitted my making observations respecting it.

I cannot give the gentlemen a stronger proof of my approval of the work than that, as a perfect stranger, I was enabled with great facility to take the pilot vessel, drawing nine feet of water, from Waterford to Dunmore without any other assistance than that the chart afforded me.

I would beg leave to suggest that when the chart is published there should not be any bar marked on it, as I do not think the flat extending between Duncannon and Creden Head deserving of such a name, the soundings being regular for nearly a mile.

M 2

No. 19.

Report and Observations of Captain *George Evans* on the Chart of Waterford Harbour, constructed by Messrs. *Carter* and *St. Leger*.

No. 19.
Report and Observations of Captain George Evans on the Chart of Waterford Harbour, constructed by Messrs. Carter and St. Leger. October 14, 1835.

It appears in the chart that there is over the flat a tortuous channel with 16 feet at low water ordinary spring tides, but from the great difficulty of discerning proper marks for it in the day time, and the impossibility of placing lights so as to be available by night, I should recommend a remark being made on the chart,—that 14 feet water will be found over the flat at low water, ordinary spring tides.

I found Duncannon light-house, on with the clear patch of ground pointed out by Mr. Conn, the deputy pilot master, as a site for another light-house, the best mark for the deepest water over the flat, and if a second light-house were erected on that patch it would serve for a mark by day as well as by night.

I think if the Commissioners were to clear away the point at Belle Vue it would materially improve the navigation of the channel.

To the Secretary of the Harbour Commissioners, &c., Waterford.

I have the honour to be, Sir,
Your most obedient humble servant,
GEO. EVANS.

No. 22.
Resolutions of the Chamber of Commerce, Limerick, Nov. 15, 1835.

No. 22.
Chamber of Commerce, Limerick, Nov. 15, 1835.

A communication having been received from the Postmaster of Limerick, on the subject of a letter from Mr. Gardiner, secretary to the Post-office Commissioners, referring to the present state of the Milford Packet station, and requesting the opinion of this body on the effect which a more improved and certain conveyance would have :

Resolved,—That this body, satisfied of the great advantage which the greatly increased correspondence from hence with the Channel and West of England would derive, and also as being the shortest, most direct and cheapest route of communicating with London, do most earnestly recommend that the attention of the Commissioners of Post-office Inquiry may be directed to the improvement of the steam-packets plying between Waterford and Milford, as in consequence of those at present on that station being defective, the communication is frequently delayed, and great inconvenience consequently results to the general trade of this important city.

Resolved,—That the Secretary be directed to furnish the Postmaster of Limerick with a copy of this resolution.—By order.

J. CARROL, Secretary.

No. 23.

Waterford, 7th Nov. 1835.

DEAR SIR,—With reference to your request that I should give my reasons for recommending that Bristol ought to be the packet station for the communication between England and the South of Ireland, I would observe, that although I am strongly impressed with the superior advantages of the packets plying between Bristol and Waterford instead of Milford and Dunmore, and although my opinion is strengthened by the very objections which have been argued by those holding the opposite view, yet the sentiments of these gentlemen will doubtless be regarded with the consideration to which their rank, independence, and intelligence so justly entitle them, while I state plainly and candidly my opinion.

It occurs to me that a powerful packet leaving Portishead at nine, A.M., would, upon an average, reach Waterford by seven o'clock A.M. next day, the distance being 194 miles. The large hulk which is now at Milford could be advantageously and safely moored under the shelter of Caldy Island, 80 miles distant from Portishead, and from Tenby a small flat-bottomed steamer could be always in readiness to convey the mails and passengers between Wales and the hulk, alongside which the mail-packet could always safely come. The distance between Tenby and the hulk would be only about two miles. In the event of Tenby or Caldy Island not being considered safe, I believe there cannot be any objection made to Dale, at the entrance of Milford Haven, as a place of the very greatest security for taking off the Welsh mails and passengers, and that, too, without causing more than half an hour's delay.

If this plan be practicable, the mail would generally reach Waterford 10 hours sooner than it now does, and the letters be delivered at the same hour as those from Dublin, and also several of the branching posts from Waterford would receive their English letters at the same time as their Dublin letters reach them. The like advantage, in point of time, would be given upon the return.

Independently of the benefits which it thus appears would result from the suggested arrangement, it would be acceptable to the southern counties of England and Ireland: and it is not only my opinion, but the opinion of very intelligent men, that instead of the Post-office having to sustain the expense of the present station, the packets, by going to Portishead, would then be likely to cover the whole sum required for their support.

Passengers would prefer the mail-packets, arriving at such convenient hours, to the long journey of 130 miles by land through Wales, and the packet could at all times leave Portishead when she could proceed from Milford. I speak this advisedly, as the result of the nautical experience of Captain Morris, Captain Rose, Captain Bailey, Captain Jones, Captain Moise, and Captain Roberts, all of whom know, practically, the navigation of the British Channel.

The merchant steamers between Waterford and Bristol would then chiefly confine themselves to goods and cattle, as the preference invariably would be given to the Government boats, if they were powerful and the fares moderate. It is highly improbable that the merchant steamers would enter into a competition in which they could not eventually succeed.

In winter, particularly, the long sea voyage would have its advantages, as the roads in Wales, although free during the last three or four winters, have been frequently obstructed by snow. In the Bristol Channel the waves, even in stormy weather, are not so high that a packet could not make head-way against them, and the tides can almost always be turned to advantage; for, when adverse, the steamer can cheat them by getting in with the shore, and when favourable, she at once runs where they move with the greatest rapidity.

The main argument in favour of the Milford station is the *short sea*; but I submit that the very fact of its *desertion* now, when the accommodation for the long voyage is not so attractive as it would be with good and comfortable passenger-packets, is an irrefragable argument of the public not being so much influenced, as it is assumed, by a *short sea*.

Previously to steam it might have been so, but now all experience is against it; and I find, in February last, when the mails from Bristol to Waterford generally took between 30 and 40 hours, the merchant-steamers were over in 10 hours less. I quote February as a stormy month, with westerly winds.

From what I have stated, it appears to me that as well for the mails as for the public accommodation, and economy to the Post-office revenue, the Bristol and Waterford station would decidedly be the best for the packets; but if I be wrong, or argue the question upon incorrect principles, they will readily be detected, as I have endeavoured to show the grounds of my opinion.

Believe me, dear Sir,

Your very obedient servant,

THOMAS PARSONS.

Mr. M'Namara, Postmaster, Limerick. Nov. 4, 1835.

No. 24.

Mr. M'Namara,
Postmaster, Limerick,
Nov. 4th, 1835.

Within the last 10 days there were three failures of the English mail coming *viâ* Milford and Dunmore, while the Holyhead and Liverpool mails were received in due course. The trade between Limerick and the West of England has increased amazingly within the last three years, which makes it of great importance to have the most expeditious and certain means for the transmission of correspondence. The packets upon the Milford station are so little relied upon at present that the merchants here do not find much benefit from that line of communication.

Mr. M'Namara has no hesitation in expressing his opinion that if the Milford packets were of a class and power to ensure their making their voyages with the same expedition and certainty that the Holyhead packets do, all the correspondence with London and the South and West of England would be forwarded by that route.

The rule at present adopted at the Post-office, with regard to letters for London, is to forward all letters *viâ* Holyhead, which are put in before the despatch of the Dublin mail. The very few letters (amounting to not more than three or four a-day) which are put in between the despatch of the Dublin and the Waterford mail are sent *viâ* Waterford. Although the postage for London *viâ* Milford is one penny less than by Holyhead, it very rarely occurs that letters are directed to be sent to London *viâ* Waterford. The Dublin mail is despatched at half-past five, the Waterford at half-past six.

The recent regulation, allowing letters to be forwarded by private ships, will certainly improve the Post-office revenue. The postage of 1s. is so small that the public will be very glad to avail themselves of the certainty of a Post-office communication in place of sending their letters by private hands, as has been generally done hitherto.

(Signed)

PATRICK M'NAMARA.

No. 25.

Letter from Lord
Lichfield to the
Lords of the Treasury,
February 9th, 1836.

No. 25.

To the Right Honourable the Lords Commissioners of His Majesty's Treasury.

General Post-office, 9th February, 1836.

MY LORDS,—Understanding that it is the intention of Captain Evans to recommend the removal of the Post-office steam packets from Dunmore to Waterford, and also that he impugns the correctness of Captain Chappell's report upon the mission to Dunmore in 1832, I consider myself bound in justice to that officer to forward to your Lordships a copy of a most able vindication of his proceedings upon that occasion which he has transmitted to me from Liverpool.

Your Lordships will not fail to observe that, independent of his own decided opinion against altering the station from Dunmore to Waterford, the mass of evidence he has collected from good and practical seamen, thoroughly acquainted with Waterford harbour, entirely bears him out in coming to the conclusion he did that there is no other place, within the Hook Tower Point, possessing similar advantages to Dunmore as a packet station; and I feel confident your Lordships will allow these opinions, so strongly corroborating each other, and all derived from long and practical experience, to have their due weight, when compared with the single one expressed by Captain Evans, who cannot be supposed to have obtained an equal knowledge of the difficulties of the intricate navigation of Waterford harbour.

I have the honour to be, my Lords,

Your Lordships' very obedient servant,

LICHFIELD.

No. 26.

Lord Lichfield.
Dunmore Harbour,
February 9th, 1836.

No. 26.

General Post-office, 9th February, 1836.

MY LORDS,—In consequence of Captain Evans having intimated to Captain Chappell his intention to call in question the accuracy of a report relative to Dunmore harbour, made by him to the then Postmaster-General in 1832, I consider it but justice to that excellent officer, and in compliance with his own request, to lay before you a most able vindication of his proceedings upon that occasion. I consider it so perfectly unanswerable, and so thorough a justification of the conclusion as to the impropriety of removing the station from Dunmore to Waterford, strengthened as it is by the testimony of so many excellent seamen, their opinions being obtained from long and practical experience, so entirely coinciding with Captain Chappell's, that I should deem any observation of my own perfectly superfluous. I feel confident, however, that these strongly expressed opinions, valuable from the sources from which they have been obtained, will have their due weight in the minds of the Commissioners, and be considered worthy of their most serious consideration, when compared with the single one of an opposite nature given by an officer who cannot by possibility have obtained so accurate a knowledge of the intricate navigation of Waterford harbour as naval officers who have been for years employed on that station.

I have the honour to be, my Lords,

Your obedient humble servant,

LICHFIELD.

To the Commissioners of Post-office Inquiry.

No. 27.

No. 27.

Liverpool, 3d February 1836.

Captain Chappell,
Liverpool,
February 3, 1836.
Vide Captain
Evans's * Reply,
page 93.

SIR,—Commander Evans, R.N., employed under the Commissioners of Post-office Inquiry, having intimated to me his intention to call in question the accuracy of a report relative to Dunmore harbour, made by me to the Postmaster-General in the year 1832, I take leave most respectfully to protest against this officer's judgment being considered conclusive, and I earnestly entreat that his Lordship the Postmaster-General will do me the justice to place this vindication of my proceedings before the Commissioners, that they may be assured how fully I am prepared to sustain the correctness of my report by irresistible evidence.

My mission to Dunmore in 1832 had reference to no less than seven distinct objects of inquiry: I was expected to report, 1st, upon the breaches in the inclined plane at the back of the pier, which threatened the immediate destruction of the light-house: 2d, as to the necessity of carrying out the base of such inclined plane, upon an extensive plan proposed by Mr. Halpin: 3d, as to the character and amount of that gentleman's estimate: 4th, as to the propriety of filling up a landing slip within the harbour: 5th, as to the security of some masonry erected upon a rock called Illaan Gleagh: 6th, as to the alleged filling up of Dunmore harbour, and the necessity of employing an apparatus for clearing out the deposit: 7th, whether there was any other place within the Hook Tower at which the packets could be stationed possessing similar advantages to Dunmore, so as to see if it might not be practicable to abandon the pier there, rather than incur the expense of repairing it.

From what I can collect, Captain Evans confines his objection to that part of my report which relates to the last of these particulars, and I shall therefore restrict my observations to this part of the subject, namely, "whether there be any other place within the Hook Tower possessing similar advantages to Dunmore as a packet station."

This inquiry naturally divides itself into two leading considerations: 1st, as to the conveyance of passengers: 2d, as to the facilities afforded for the arrival and departure of the packets, under all circumstances of wind and weather, so as to ensure certainty and punctuality in the daily transmission of the mails.

Respecting passengers, it will be observed that they have gradually withdrawn from the Milford line, since the increase of steam communication between Bristol and ports in the South of Ireland; and ten years' experience, added to much reflection on this matter, has convinced me, that no improvement of the packets, no splendour of equipment, no additional accommodation or increased power of steam, will ever allure passengers to return to this route. The cause which has diverted the stream of passengers from Milford is, in fact, beyond the control of any administrative arrangement, since it originates in the change produced by the gradual predominance of steam navigation. It is trade and manufacture that create the chief intercourse between Ireland and England, as well as between other countries, consequently persons proceeding on business only will always give preference to the quickest and cheapest conveyance. Neither Pembroke-shire, Cardigan-shire, nor Carmarthen-shire, possess any commercial attractions, being principally pastoral districts and destitute of manufactures. Brecon and Glamorgan-shire, indeed, have iron and copper-works, but even these are cheaper of approach from Bristol than from Milford. When sailing vessels were the only modes of conveyance, it suited even mercantile men to give the Milford route the preference, as the voyage to Bristol was then both tedious and dangerous; but steam navigation has rendered the passage as short and certain almost as that to Milford, while for persons proceeding to England the saving in time and expense by the Bristol line is more than two thirds of the whole. Passengers are carried from Cork or Waterford to Bristol as cheaply as to Milford, and even if the Post-office packets conveyed them to the latter place for nothing, yet the long and expensive land journey from thence would always make this the most costly route, to say nothing of the inconvenience attending the circumstance of there being but one coach running to Milford, and that, being the royal mail, is of course the highest in its charges and carries the fewest passengers. The same causes are producing the same effects in diverting the stream of communication from Holyhead to Liverpool, and there can be no greater error than ascribing these transitions to any supposed inferiority in the packets at Holyhead or Milford; for although the proximity of the former to the capital of Ireland may continue to ensure it some degree of intercourse, yet with respect to Milford, I am convinced, as steam navigation improves, there will be less inducement to travel by that route, and nothing but an alteration in the features of nature itself can ever materially increase the receipts accruing from passengers upon that station.

Adverting now to the second, and, so far as the Post-office is concerned, the most important point of this investigation, it will not be difficult to show that there is no other place within the Hook Tower possessing similar advantages to Dunmore as a packet station, as regards solely the prompt and punctual transmission of the mails.

The object of a post communication is to ensure daily regularity, in preference even to an occasional but fluctuating celerity. Accordingly, it has become almost a general rule to have as much of land conveyance, and as little of water, as possible; but especially would it be objectionable to substitute water carriage for land, where by so doing the distance would be increased, and the navigation rendered more difficult. Upon this principle alone is Dunmore to be preferred before any other place within the Hook Tower, as a single glance at the red line drawn across the little map sent herewith will suffice to show that the nearest and clearest mode of conveying the mails to Waterford is by land from Dunmore. As contrasted with the route by water, the coach would in fact be running along the base of nearly an equilateral

* The references in the margin have been inserted at Captain Evans's request.

No. 27.

Captain Chappell,
Liverpool.
3rd February 1836.

triangle, while the packet proceeding direct to Waterford would have to navigate round the other two sides, under every disadvantage attending a narrow, crooked, and rapid river.

The question as to distance being plainly in favour of Dunmore, its superiority is immeasurable as respects the facilities afforded for the approach and departure of the packets. Not the slightest accident has happened to either of the four Post-office steam packets, in entering or leaving Dunmore harbour, since their first establishment nearly twelve years ago; while no less than four or five of the private steam vessels trading to Waterford have been totally lost during the same period, and two of those wrecks took place actually within the Hook Tower Point. These facts alone seem conclusive of the eligibility of Dunmore as a packet station. The coast near this spot is so bold and steep that the packets are accustomed to venture in during fogs and dark nights, when it would be madness to approach the shoals and contracted channel above Creden Head. In departing, also, Dunmore possesses still greater advantages, as there can never occur a fog so dense as to prevent the packet putting to sea, and the instant she is clear of the pier head, there is an open sea before her, and she may shape a course in full speed for Milford, without hesitation or risk; while, under similar circumstances, it would be wholly impossible to steam at full speed down Waterford river, and pass all the rocks and shoals, without running foul of vessels, or occasionally getting the packet on shore. I need hardly observe, that should she touch the ground upon an ebb tide, there would be not only a day's mail deficient at Milford, but very great probability of disabing or losing the packet altogether.

In heavy gales of wind, also, blowing directly into Waterford river, a departing packet, meeting a strong flood tide, might be plunging for hours between Passage and the Hook Tower, where there is frequently a tremendous sea, when, under the same circumstances of wind and tide, being so much farther to windward at Dunmore, she might at once double the Hook Point, and make good her offing.

Having thus detailed the principal grounds upon which I was induced to give an opinion in favour of Dunmore as a mail packet station, in preference to either Passage or Check Point, and Waterford itself appearing completely out of the question, both as relates to its greater distance by water and its crooked and cramped navigation, it only remains that I should notice the trivial point upon which Captain Evans has signified his intention of impugning my report. This is as to the soundings upon the bar of Waterford river, at the lowest ebb of extraordinary spring tides; as although this formed by no means a prominent objection in my mind to a removal of the packet station to Passage (the only notice of it being comprised in three lines of my report), yet I am anxious to defend my proceedings, even in this petty particular, from any imputation of neglect or error.

Captain Evans, having, as he says, upon two or three days' soundings taken by himself, or upon some other authority of which I am not aware, determined that the minimum depth of water is 16 feet, while my report, and every document, and every person, which I have been able to consult or discover, fixes it at 13 feet or under, it is certainly essential to specify from what sources my information was derived.

1. Admiral Knight's survey gives the lowest soundings on the bar at 2½ fathoms, or 13 feet.

2. Mr. Nimmo's general chart gives it at 12 feet.

3. Norie's sailing directions gives the lowest at 10 feet.

4. Captain Nuttall, 39 years captain of a Milford Post-office packet, sailing from Check Point and Passage, who had sailed over this bar for more than half a century, and who as senior captain, was the authority upon which I chiefly relied, declared the lowest soundings did not exceed 13 feet.

5. Two passage pilots gave the soundings to me at 13 feet.

6. Captain Dunn, R.N., six years inspecting commander of the coast-guard at Duncannon and Dunmore, and who frequently traversed the bar in boats, assured me the soundings were 13 feet.

Upon such authorities I felt fully authorized to state the depth of water as shown in my report, particularly as the soundings had so little weight as related to my consideration of the question at issue. Captain Evans, however, has imputed it as neglect that I did not personally ascertain the soundings upon the bar, though I was several days employed in boats examining every part of the river between Dunmore and Waterford. But it should be remembered how little consequence I attached to the soundings, that I had no reason to suspect the correctness of my information; and that even had I entertained doubts upon the matter, having neither time nor means to complete an accurate survey, it would certainly have been both injudicious and presumptuous to dispute such testimony as that of Captain Nuttall upon a few castings of the lead, taken at any period, however favourable for the purpose. In fact, I differ altogether from Captain Evans as to the propriety of merely dabbling in a matter of this description, and upon the reliance which ought to be placed upon two or three days' sounding upon a bar, which probably varies in depth, as it may chance to be affected by heavy gales from the Atlantic, or powerful floods from the river Barrow and Suir. Had there been no bar whatever to Waterford river, but ample depth of water at every time of tide, I should still think it not only objectionable, but absurd, to recommend a removal of the packet station which should substitute 18 miles of water conveyance for 12 miles of land carriage, for the sole purpose, as it would seem, of entangling those vessels in the tortuous and narrow channel of a rapid river, having its entrance contracted on both sides by extensive banks of mud and sand.

Sufficient, I trust, has already been advanced to prove, that my report, made nearly four years ago, is perfectly correct in every particular; but as it seems to be the intention of Capt. Evans, upon very cursory consideration, to recommend the removal of the packet station from

Vide Capt. Evans's
Report on the Chart
of Waterford River,
page, 83.

Dunmore harbour to Waterford quay, I deem it an imperative duty, to subjoin some evidence, which I have obtained upon this subject, within the last few days.

First.—Captain Keay, commanding the William Penn steamer, plying to and from Waterford, testifies that he once sounded on the bar in 14 feet, and that he believes it sometimes does not exceed 13 feet. He states that there is only one place, (off Cheek Point between Passage and Waterford,) where his vessel has space to turn round, and that at Waterford, when arriving at a flood tide, it has been his practice to turn his vessel, by running her bow upon the bank of the river, and letting the flood tide sweep her stern round.

Secondly.—Captain Gosson, commanding the St. Patrick steamer, plying to Waterford, states the depth of water upon the bar, low spring tides, to be not above 13 feet; that there is a worse sea off Craden Head, than in any part of his voyage from Waterford to Liverpool; and that he is not only in the constant habit of waiting in Dunmore Bay for water over the bar, but, during a late tremendous gale, wherein several ships foundered, he was compelled to keep the sea all night, from the heavy sea that was breaking upon the bar.

Thirdly.—Captain Clarke, commanding the Gypsy steamer, plying to Waterford, believes the depth of the water on the bar does not exceed 13 feet at low ebb, spring tides. He also states, that he has made it a constant practice to wait for half flood to pass over the bar, whenever there was much sea, both in going out and arriving.

Fourthly.—Captain Bailey, commanding a private steam-vessel, plying between Bristol and Waterford, states that the lowest depth of water on the bar is 14 or 15 feet in ordinary, and 13 feet in extraordinary spring tides. Should a vessel draw 11 feet, she would be liable to strike upon the bar when there happened to be a heavy sea running.

Fifthly.—Matthew Burke, pilot for Waterford River, perfectly coincides in the testimony of Captain Bailey.

But the most important evidence of the whole, and that which must outweigh the opinion of either Captain Evans or myself, is that of Captain Owen, who for a considerable time commanded a private steamer plying to Waterford, and who now commands His Majesty's Post-office packet, Wizard, at Holyhead. Being an officer of the royal navy, thoroughly acquainted with Waterford river, and with an intimate knowledge of the nature of a post communication, he seems peculiarly qualified to decide the question as to the eligibility of Dunmore harbour for a packet station, when compared with other places within the Hook Tower. Having never seen this officer, I ventured to write to him, requesting replies to a few plain queries; and his answer appears to me so clear and convincing, that I shall here transcribe it verbatim:

Sixthly.—“The lowest soundings which I can recollect finding upon the bar off Duncannon, was 11 feet 6 inches, excepting once when I got a little too far to the eastward, and, it not being the best depth, I grounded in 10 feet. The vessel I then commanded was very sharp, never drawing less than 11 to 14 feet. I never attempted to cross the bar at low water spring tides, but generally anchored in Dunmore Bay and waited for about two hours' flood, which would enable me to cross the second bar, between Cheek Point and Waterford, and to go direct to the quay. The channel on the other side of Little Island (called the King's Channel) is deeper, but it is winding and narrow and subject to strong eddy tides, which make it very dangerous.

“Taking into consideration the navigation of Waterford river, and which is the fittest and most eligible station for mail-packets, Dunmore, Passage, Cheek Point, or Waterford, I should certainly give (in my opinion) Dunmore the preference, as being the most eligible site for the prompt and regular transmission of the mails; for I do not believe the duty can be so well effected from any of the other given points.

“In dark nights, or in foggy weather, a packet cannot navigate and land the mail with equal facility and safety to the vessel at Passage or Cheek Point, (Waterford I put quite out of the question,) as at Dunmore. At Passage, in gales of wind, with a strong tide running, I have often been unable to communicate with the shore, or the shore with me. At Cheek Point the tide is much slacker, better shelter from all winds, and therefore more direct communication with the shore. The anchorage at Passage in the winter is very much taken up by merchant vessels. The difficulty of steering clear of them in a narrow channel, and dark nights, with a strong tide running, and to navigate as far as Cheek Point, is both great and dangerous; therefore, under all these circumstances, I conceive that Dunmore offers the greatest facility, and the greatest safety, for approach and departure of the mails.

“I have often found a heavy sea on the bar off Duncannon, particularly between the bar and Dunmore; I have shipped heavier seas there, than on any other part of the passage to Liverpool.

“I cannot exactly say what may be the extreme velocity of tide in Waterford river; it varies according to the winding and breadth of the different reaches; I should think that in some the tide runs six miles an hour.”

“There is very little room to turn a steamer round in any part of Waterford river, except between Cheek Point and Buttermilk Point. Should two steamers meet in any of the narrow parts of Waterford river, in dark nights, or in thick foggy weather, they would find it difficult to steer clear of each other without the chance of being on shore.

“I never took a steamer in or out of Dunmore. I once went there by land, and from what I could then see of the harbour, I should certainly say that it is by far the best and most eligible site for the prompt, safe, and regular transmission of the mails.”

In conclusion I shall give an extract from a written communication made to me by Captain John Roberts, an officer in His Majesty's navy, and an excellent seaman, who for the last eleven years has commanded one of His Majesty's Post-office packets, plying between Milford and Dunmore, and who for years before Dunmore harbour was constructed, commanded the

Sir Francis Freeling Post-office packet, sailing out of the Waterford river. The fact with which his testimony concludes, will furnish to the Commissioners a striking illustration of the comparative advantages of Dunmore, and other places within the Hook Tower Point, as a station for His Majesty's Post-office packets.

Seventhly.—“The bar which runs immediately across from above Craden Head to above Broom Hill, has from 13 to 14 feet water, spring tides. In running for Duncannon lights, it is necessary to be cautious in giving Ballistraw Spit a good berth, as on the east side the sea runs heaviest. On the west side the sand extends to within two cables' length of Duncannon Fort, and continues to the Spit beacon off King's Bay.

“The difficulty of packets going into Waterford river would occur when Duncannon lights could not be seen, from fogs or thick weather. Since I have been in command of His Majesty's steam-packet “Sibyl,” we fell in with the St. Patrick private steamer, off the Tusker, and proceeded in company to the Hook Tower Point, at which time a fog came on, when I found little difficulty in getting into Dunmore. But mark the consequence with the other vessel bound to Waterford: she kept groping about from side to side until she became a total wreck upon the eastern shore.”

Having thus explained my reasons for thinking that any great increase of passengers upon the Milford station is not, under any circumstances, to be expected; and having shown the grounds upon which I found the opinion, that there is no other place within the Hook Tower Point possessing similar advantages to Dunmore as a packet station, I must conclude by apologizing for the unavoidable length of this statement, and beg to subscribe myself,

Sir,—Your obedient servant,

E. CHAPPELL, Agent H. M. Packets, Commander, Royal Navy.

No. 28.

Captain Evans,
Commander of H.M.
Packet Vixen.
12th Feb. 1836.

No. 28.

Milford, 12th February, 1836.

SIR,—I have the honour to acknowledge the receipt of your letter, bearing date the 4th instant, requesting to be furnished with replies to, and observations on, various points connected with the management of the Milford Packet Establishment.

My absence from Milford on sea duty, has caused an unavoidable delay in my reply.

The subjects on which, I perceive, I am more particularly required to report, are comprised under the following heads, viz:—

1. The build of the “Vixen.”
2. The nature and amount of her repairs.
3. Receipt and issue of stores.
4. Power of engines of the Milford packets.
5. Suggestions for any improvements in the Milford Packet Establishment.

First.—The “Vixen” was built at the dock-yard, Deptford, in the year 1823-4. The materials employed in her construction, are of the best description; and the workmanship throughout is of the most superior kind.

In point of strength, a most essential quality in steam-vessels, she is equal, if not superior, to all the other packets that have appeared on this station; and which last have been built at rivet yards, by contract.

Although the “Vixen” has been justly considered efficient for *her class*, she would have been still superior in speed had she been modelled upon principles which have *since* been introduced with advantage into the construction of steam-vessels, where *speed* was the object, rather than capacity for stowage. I venture to speak with some confidence on this subject, from having had, during the period of my service (17 years), on this station, ample opportunities of seeing tested, the various improvements introduced from time to time, in the construction of the *hull*; as well as the *engines* of steam-vessels; and to both of which subjects, I have devoted much of my attention, as well from inclination as from a sense of duty.

The errors of construction, I have remarked, common to the generality of steamers, are,

1. Want of sufficient length.
2. Not sharp enough in the entrance forwards
3. Not *flat* enough on the floor.

The effect of the *two first* errors, (of which the “Vixen” partakes) is to diminish the speed. The effect of the *third* error is, to cause a vessel unnecessarily to draw more water than she ought to do.

Second.—*The amount and nature of the “Vixen's” repairs.*

I take it for granted, this is meant to apply to the *hull* of the “Vixen,” which has not undergone any repairs, at least, such as may properly be so called. I conceive that the occasional repairs of bulwarks, damaged in severe weather, and other casualties of a trifling nature, are not here alluded to: but if I am mistaken in my conclusion, I have only to observe, that as all the expenses of the establishment for repairs are paid by the agent of the station, where such repairs are done, their amounts can only be obtained from such agent's office.

Third.—*The receipt and issue of stores.*

The supply of stores for the establishment, is exclusively provided by the agent of the station. A stock of the most essential articles of consumption is kept in a hulk provided for the purpose, and placed under the care of a storekeeper, who issues the same upon the production of a written demand signed by the agent and commander.

Fourth.—*The power of the engines of the Milford packets.*

Vessel's name.	Horse power.	Engine-maker's name.
Aladdin	100	Messrs. Fawcett and Co., Liverpool.
Sibyl	80	Ditto
Crocodile	80	Bolton and Watt.
Vixen	80	Ditto

No. 28.
 Captain Evans,
 Commander of H.M.
 Packet, Vixen,
 12th Feb. 1836.

The "Aladdin" had originally but 80-horse power, but was afterwards supplied with larger cylinders, giving her an estimated power of 100 horses, which has made her the most efficient vessel, in adverse weather, on the station.

The "Sibyl's" power, although nominally 80, is greater than that of the "Crocodile," or the "Vixen." The reason of this is, that Messrs. Fawcett and Co. use larger cylinders for any given nominal power, than other manufacturers. For instance,

Diameter of "Sibyl's" cylinders	37 inches.
Ditto "Crocodile" or "Vixen"	35½ inches.

The effect of this difference, small as it appears, is to give an increase of power of 7 or 8 horses, in favour of the "Sibyl."

With the view to economize fuel, and to increase the power, the principle of *expansion* has been introduced into the engines of the "Vixen," "Aladdin," and other of His Majesty's packets. Hitherto the steam was admitted into the cylinders, during the whole ascent or descent of the pistons; but, by an alteration and new adjustment of the *slides*, the admission of steam is *cut off* at about *half stroke*, when the remaining part of the stroke is effected by the *expansion* of the steam alone, thus expending only half a cylinder-full of steam, instead of double the quantity which was done by the old method, when working "*full stroke*;" but I should observe, that in order to apply beneficially as to *power* the expansive principle, it is necessary to increase the elastic force of the steam; accordingly the safety valves of the "Vixen" have been loaded to 6½ lbs. per square inch.

Fifth.—*Suggestions for the improvement of the establishment.*

Those points of the establishment which appear to me the most susceptible of improvement, are, 1.—The mode of landing and embarking the mail, passengers, carriages, &c., at Milford; 2.—The power and efficiency of the packets.

As to the first, the removal of the packets to Hobbs' Point will obviate the inconvenience and frequent difficulties at present experienced in landing and embarking the passengers in boats; but previous to such removal of the establishment, it will be necessary to place a *light* at the Ware Point, and another at the Carr rocks, to facilitate the navigation of the river. It will, likewise, be important to supply these light vessels, one with a gong, the other with a bell or horn, to enable the packets to grope their way during fogs.

As to the efficiency of the packets, I have to observe, that the power of the "Crocodile" and "Sibyl" may be increased, by placing larger cylinders in them, as was done in the case of the "Aladdin." But should Capt. Evans' R.N. proposition be carried into effect, that of introducing new vessels of much greater power, (say 160-horse power,) there can be no doubt that the effect would be a regularity and celerity in the transmission of the mails, never hitherto attained on this station. Such vessels ought not, if properly constructed, to draw more than nine feet to nine feet six inches water, which is about the greatest draught that *Dunmore* will allow.

Confirmatory of my opinion as to the above-named draught of water for vessels of 160-horse power, I may instance the new Revenue steamer "Vulcan," of 324 tons, and 120 horse-power, drawing but seven feet six inches water. This important reduction in the usual draught of water, for vessels of such burthen, was obtained by adherence to the good principle already alluded to, viz.: *great length* and a *flat floor*.

I should observe, that the "Vulcan" is, besides, an exceedingly fast vessel.

I have only to add, in conclusion, that should the projected measure of making *Waterford quay*, the point of communication with Ireland, be carried into effect, so light a draught of water as 9 feet 6 inches, will be highly advantageous in the navigation of the Waterford river.

I am, Sir,

Your obedient servant,

W. D. EVANS, Commander of His Majesty's Packet "Vixen."

J. R. Gardiner, Esq.

No. 29.

Milford, 3d April 1836.

Capt. W. D. Evans.
 Navigation of
 Waterford River.
 3d April 1836.

SIR,—I take the earliest opportunity, after arrival from sea, of acknowledging the receipt of your letter dated 28th ult., requesting to have my opinion as to the practicability of navigating the Waterford river with an improved class of packets on this station, and of landing and embarking the mails, &c., at the quay of Waterford, instead of Dunmore.

It happens that about two months since I was called upon for a report on the same subject, by the present agent for packets at Liverpool.

The subject was submitted to me in a series of questions, by Captain Chappell, accompanied by a request that I would obtain replies to them, and state the authorities from whom such replies were obtained.

I accordingly consulted two persons, whom I considered unquestionably as good authorities as could be found, to give an opinion on this subject. I mention this to introduce their

No. 29.

Capt. W. D. Evans,
Navigation of
Waterford River,
3d April 1836.

names in this report, to prove for your satisfaction that the opinion I have long entertained on the subject in question is not unsupported by experienced nautical men.

They are, first, Captain I. Bailey, of the mercantile steamer, *Mermaid*, several years plying in a large steam-vessel between Waterford and Bristol.

Secondly.—One of the most intelligent of the senior pilots for the river Suir.

These two persons I consulted separately, and had the satisfaction to find that their opinions were similar, and that they coincided with me in thinking it clearly practicable to navigate the Waterford river at any time of tide, day or night, (thick fogs of course excepted,) with steamers not exceeding ten feet draught of water.

This opinion is somewhat supported, too, by the fact that the old sailing packets, drawing more water than our present steamers (at least some of them) had for upwards of 30 years prior to their removal to Dunmore from Chick Point and Passage, navigated successfully the most difficult parts of the river, during all times of tide, and all varieties of weather, both day and night. During that long period one packet only was lost in the river, and that in daylight, by missing stays.

It is true they did not ply with that regularity since attained by steam, but the simple fact of their being able to find their way up and down the river for so long a period, and, of course, in every variety of weather, is, in my opinion, a tolerable proof that the intricacies of the channel are not such as to prevent its navigation by steamers of a limited draught of water.

I have mentioned ten feet as the maximum draught, admissible at all times of tide; but I beg to observe, that steamers of 160 to 180-horse power, if constructed on the best principles, combining the good qualities of speed and light draught, ought not to draw above nine feet water. This easy draught would at once dissipate all doubt as to passing safely over the bar during a heavy sea at low water spring tides.

The intended hour of starting from Hobbs' Point (midnight) will be very favourable for the navigation of the river Suir, as it will, in a vast majority of cases, insure the packet's arrival in the river during daylight. Again, the coach hour of starting from Hobbs' Point will necessarily be about 2 A. M. The corresponding hour for the packet to leave Waterford, will therefore be about noon; thus affording, almost invariably, the important advantage of daylight, both up and down the river.

If any doubt existed on the subject under consideration, it would be as to whether the river could be navigated, at all times during the night, with that certainty and regularity indispensable in the transmission of the mails; but this doubt is at once removed by the assurance of having daylight, as shown above.

I have, therefore, no hesitation in asserting that it is my firm belief, that the attempt to navigate the Waterford river with a superior class of packets, as already described, could not fail to succeed.

I have only to add, that of many nautical men whom I have consulted, not one has given an opinion on this subject adverse to my own.

I have the honour to be, Sir,

Your obedient, faithful Servant,

(Signed) W. D. EVANS.

Capt. Geo. Evans, R.N., &c.

SIR—I had not space in the enclosed sheet to mention what I consider an important fact, as bearing, in some degree, upon the projected measure of the removal of the packets from Dunmore to Waterford.

The harbour of Dunmore is rapidly filling up by deposit of mud, &c.

Since a few years, it has actually shallowed 4, and in some places 5 feet and upwards. I had a practical proof of this last night, by my vessel sticking hard and fast in the middle of the basin. She draws 8 feet 8 inches.

I am, Sir, yours most obediently,

(Signed) W. D. EVANS.

Capt. Geo. Evans, R.N., &c.

Capt. Bailey of the
Mermaid Steamer,
as to Navigating
Waterford River.
8th April 1836.

No. 30.

Mermaid Steamer, Waterford, April 8, 1836.

MY DEAR SIR,—In reply to yours of the 6th inst., I find you are correct as to the conversation you remember to have had on board with me, and reply to your queries as follows:—viz.

1st.—The *Mermaid* draws 11 feet of water.

2d.—When we arrive at night in Waterford river at low water spring tides, or at any time of tide, if not prevented by fogs, or extreme darkness of the night, we immediately proceed on to Waterford, and have water at all times sufficient to take us over the ford or bar. I shall always feel pleasure in answering any further questions you may have to put.

Yours, &c.

(Signed) JOHN BAILEY.

To Capt. W. D. Evans, H.M. Packet "*Vixen*."

No. 31.

No. 31.

SIR,—In reply to your query respecting the coal-boxes of His Majesty's packets on this station; I have to say, that when steam-packets were first established here, the coals were partitioned off from contact with the boiler by a bulkhead of sheet iron—but about six years ago this bulkhead was dispensed with, and the sides of the boilers were made to answer as part of the coal-boxes, by which a greater quantity of coal can be stowed away.

Captain Evans, as to Coal-boxes in H.M. Packets on that Station.

This alteration was made at Holyhead, when our packets were supplied with new boilers; but I do not think it is a good plan; and our experience on this station has proved it to be attended with some danger, the coals having in some of our packets ignited several times, but happily without fatal consequences.

I am, Sir,
Your obedient Servant,
(Signed) W. D. EVANS.

Captain Evans's Reply to Capt. Chappell's Report.

To Viscount Duncannon.

Office of Woods, April 27, 1836.

MY LORD,—Having read the letter of Captain Chappell to the Secretary of the Post-office, dated 3d February 1836, and transmitted by the Postmaster-General to the Commissioners of Post-office Inquiry, I feel it my duty to call your Lordship's attention to the following points of that letter.

Captain Chappell commences by stating that I had intimated to him my "intention of calling in question the accuracy of a report" made by him in the year 1832 to the Postmaster-General relative to Dunmore harbour, and puts forward this alleged intimation on my part as the foundation of his long letter to Mr. Freeling.

I can most positively assure your Lordship, that in any conversation I ever had with Captain Chappell, I never intimated to him any such intention; neither did I intend to call in question the accuracy of his "report," nor did I use to him any expressions calculated, in my mind, to justify any inference to that effect.

Previous to Captain Chappell forwarding that letter to Mr. Freeling, I had but two interviews with him. On both these occasions Mr. Gardiner, the secretary of the Commissioners, was present, and that gentleman will confirm my confident recollection of what then took place.

Captain Chappell's report relative to *Dunmore harbour* was never mentioned by me, although I spoke of the practicability of navigating Waterford river up to the quay of that city; and reference having been made to the depth of water on the bar of that river, and to the positive testimony given by Captain Chappell upon that point, I asked him if he had ever sounded it? Captain Chappell replied that he had not. I then, upon hearing this admission from Captain Chappell, did most certainly remark that, in my opinion, he ought not to have pronounced himself so positively as to the depth of a part of the river which, by his own acknowledgment, he had never sounded; and, the better to convince him of the danger of placing implicit confidence in the assertions of even harbour-masters and pilots on such a subject, I instanced to him a case in which the safety of His Majesty's frigates "*Magicienne*" and "*Liverpool*" was entirely owing to my not having adopted such assurances for my guide. The case was this,—

When I was master of the "*Magicienne*," in the East Indies, in the year 1817, we arrived at Port Louis, in the Isle of France, during the hurricane season. I was very anxious to take the frigate into the basin called the Trou Fanfaron, (*vide* my survey of that harbour accompanying this memorandum,) but the harbour-master, and every pilot belonging to the place, told the captain (J. B. Purvis) that it was utterly impossible, from the want of sufficient water, to take the frigate into the basin. This induced me to sound the harbour myself, and, finding plenty of water, I took the frigate into the basin upon my own responsibility, with the permission of Captain Purvis. Shortly after, during a violent hurricane, every vessel in Port Louis (39 in number) was wrecked or lost, with the exception of the *Magicienne* frigate; and had I not sounded the harbour myself, but relied on the opinions of the harbour-master and pilots, the frigate must have been lost had she been suffered to lie in the outer harbour.

On the arrival of His Majesty's frigate *Liverpool*, Captain Sir Francis Collier, to relieve the *Magicienne* in the following year, that frigate was also brought into the Trou Fanfaron. While both vessels were lying there another hurricane occurred; and a reference to the letter of Captain Sir Francis Collier,* and the log-book of the *Magicienne*, will show that the safety of both frigates was owing to their being in the basin during those hurricanes.

Having, I hope, satisfied your Lordship upon this part of Captain Chappell's letter, I feel that it still remains for me to call your Lordship's special attention to some of the

* DEAR EVANS.—I have no hesitation in saying that if the *Liverpool* had not been in the Trou Fanfaron during the hurricane in 1818, she must have been lost, had she been at usual anchorage; and I am further of opinion that the Trou Fanfaron ought to be constantly kept clear of mud, to keep that valuable anchorage in a fit state to receive a man-of-war and vessels of a large draught of water.

To Capt. Evans, R.N.

Yours very truly,
F. H. COLLIER.

No. 92.

Captain Evans's Reply to Captain Chappell's Report.

Capt. Bailey's Letter, page 92.

Capt. Evans's Letter, page 91.

Vide Appendix, No. 29.

evidence by which he seeks to sustain his opinion of the impracticability of navigating Waterford river.

Among the authorities upon whom Captain Chappell relies are Captain Bailey and Captain Roberts. Now, my Lord, with respect to Captain Bailey, we have the most positive testimony from that officer bearing directly on the question.

Captain Baily states, speaking of the vessel he commands, "that the Mermaid draws about eleven feet of water. When we arrive at night in Waterford river at low water, spring tides, or *at any time of tide*, if not *prevented by fogs*, or *extreme darkness* of the night, we immediately proceed on to Waterford, and have water at all times sufficient to take us over the ford or bar."

With respect to Captain Roberts, he likewise states "that he is of opinion that if vessels of double the power of the present ones were placed on the Milford station, they might, from being able to perform the voyage always during the day, be able to go direct to Waterford, and save one-third of the time now occupied in conveying the mails across the Channel. Should any circumstances prevent the packet getting up to Waterford, which would seldom or ever occur in a vessel of the class recommended by Captain Roberts, then the mails might be landed at Dunmore or Passage."

The practicability of the navigation is corroborated by the testimony of the pilots, as your Lordship will perceive by the certificate transmitted to the Commissioners by Captain W. D. Evans, commanding the Post-office packet "Vixen," now on the Milford station.

But, my Lord, I have to call your Lordship's attention to a much more extraordinary circumstance connected with this subject, viz., the apparent suppression, by Captain Chappell, of important evidence.

Captain Chappell formally applied to Captain William Evans, of the "Vixen," for his opinion relative to Waterford river; and although the latter officer, as required, forwarded to him a report on the subject, Captain Chappell has not made the slightest allusion to the existence of that report, in the enumeration of the evidence which he lays before the Commissioners, to enable them to come to a right conclusion on the practicability of the navigation of the river.

The report of Captain William Evans, founded on long experience, (he has been 18 years, I believe, on that station,) and supported by high concurrent testimony, is at *total variance* with the opinion of Captain Chappell. It is not for me, my Lord, to say whether that circumstance can in any way account for its suppression in the manner to which I have ventured to call your Lordship's attention.

I have the honour to be, my Lord, your obedient Servant,
(Signed) GEORGE EVANS.

OBSERVATIONS.

It is the particular duty of four of these men to attend the sailing and arrival of the packets night and day; to water the packets, which they have to convey from the town to the pier. By day, one of them attends the agent's-office as a messenger. The remaining two, who are old and infirm men, have been employed constantly at the Post-office to receive and despatch the mails. The four former have also the slinging of horses and carriages, and to see them landed in safety. Their duties are constant and arduous, as, by a late regulation made by the agent, they have to assist in mooring the packets in bad weather.

THOMAS BEVIS, Agent.

No. 21.

SIR,—We would be willing to convey the Stores required for the Post-office Dockyard from Liverpool to Holyhead at the under-mentioned Prices:—

No. 21.
Tender made by
Owners of Private
Traders for Freight-
age of Stores.

	s.	d.
Iron, per ton	6	0
Ropes, per ton	10	0
Tallow	10	0
Tar, per barrel	2	0
Copper	10	6
Oil, per gallon	0	4

(Signed) JOHN PRICE, Commander of the Industry.
WILLIAM PARRY, Commander of the Endeavour.

J. R. Gardiner, Esq.

No. 22.

N. M. Goddard, Esq., Packet Agent.

No. 22.
Statement of
Mr. Goddard, taken
17th Nov. 1835.

Holyhead, Nov. 17, 1835.

It has been the practice on this station to obtain all supplies required for the maintenance and repairs of the packets from Liverpool, with the exception of ash, elm, and oak timber, which is generally brought from North Wales. The postmaster at Liverpool, under instructions communicated to Mr. Goddard by his predecessor in office, makes all the purchases and pays the bills, at the request of Mr. Goddard, quarterly, on having the bills of parcels transmitted to him with provision for the payment. The only articles which are brought from Liverpool without the intervention of the postmaster, are the materials required for building the boilers, or the repairs of the machinery.

The wages of the dock-yard establishment, and the crews of the packets, are paid weekly, the engineers monthly, and the commanders quarterly. Some small articles, not received from Liverpool, are paid when the bills are presented.

Upholstery, &c., is obtained occasionally in Holyhead upon the best terms the agent can obtain. The tradesman who supplied upholstery from February 1833, to April 1835, has not yet been paid his bill: the reason is, that he would not send in his bill after repeated applications.

No. 22.

Statement of
Mr. Goddard, taken
17th Nov. 1835.

None of the stores for the use of the dock-yard or packets are contracted for. The Post-office never recommended to the agent that any means should be taken for obtaining the stores by contract. They desired, at one time, that Mr. Goddard should ascertain upon what terms coals would be supplied from Troon by contract. Upon receiving the order Mr. Goddard, as directed by the Post-office, made inquiry of two persons at Troon to know upon what terms they would be willing to contract, and Mr. Goddard found from the terms those individuals proposed, the present mode was more advantageous. The persons at Troon to whom this application was made, were the parties who had previously supplied the coals for the packets, and have continued to furnish them ever since.

There are only two collieries at Troon, and about three-fourths of the coals are obtained from the Kilmarnock colliery, the remainder from Gateshead colliery. The price paid at the pit's mouth for Kilmarnock coals is 9s. a waggon load, and for the Gateshead coals 8s. 6d., also delivered on board. The reason for obtaining the larger supply from the Kilmarnock colliery is, because there are greater facilities for shipment there, the colliers having been occasionally obliged to wait a fortnight to obtain a cargo at Gateshead.

The Troon coals are decidedly superior to any other. The coals which have been occasionally supplied from Liverpool are very inferior to the Troon coals.

Mr. Goddard calculates that the value of the coals in store varies from 12s. to 13s. a ton. The agent has been in the habit of allowing private individuals to receive coals from the packet store; the price charged to private individuals is 16s. 6d. per ton of 32 bushels. The value of the coals in store is calculated at the rate of 28 bushels to a ton. When the price of coals was higher than it is now, in consequence of its being obtained from Glasgow, the agent fixed 16s. 6d. as a fair remunerating price to the Post-office for coals, which might be supplied to private individuals. There is no written authority from the Post-office, nor direct authority from the Postmaster-General, allowing private individuals to be supplied with stores from the dock-yard. Mr. Goddard considers he has an understanding with Mr. Freeling which justifies him in issuing these supplies, and is of opinion that the tacit consent of the Post-office may be sufficiently implied, inasmuch as all accounts of these sales of stores to individuals are sent up in the quarterly account.

Coals are occasionally supplied for Admiralty vessels, for which there is now a direct authority. They are charged 13s. 6d. per ton of 28 bushels, and private vessels are supplied at the same rate.

The resident engineer has no part of the stores under his control, with the exception of brass work, and what may be in the hands of the workmen. The boiler-plates may also be considered under his charge, and bar and rod iron, as he is allowed to draw these stores as he requires them, but a note of the weight is always taken by the yeoman of the stores.

When a mass of old stores accumulates in the yard they are sold by the agent; they are not offered to public competition, but application is made to the most respectable iron masters in Liverpool to ascertain what is a fair price to demand. The old iron deemed un-serviceable, after examination by the resident engineer and boilermaker, with a view to select and retain what may be serviceable, is set apart for sale. All the old and broken iron is sent to Liverpool for sale in small coasting vessels. The freight per ton for carrying it to Liverpool is 4s.

The coasting vessels between Holyhead and Liverpool, which carry round the old iron and bring back the stores, are either wholly, or partly, the property of Mr. Johnstone, the resident engineer. Mr. Goddard employs them as being much more certain and expeditious in their passages; and when any piece of machinery is required from Liverpool for which there may be a pressing necessity at Holyhead, these vessels are always ready to start, either with a half cargo, or they will wait after they are laden until the stores are ready to be shipped, to the very great advantage of this station. When any part of the machinery is wanted expeditiously, and with greater certainty than by a sailing vessel, it would of course be sent *via* Kingstown, and brought thence in the Post-office packets; there is, in this case, no charge for freight.

The resident engineer is not in the habit of purchasing old stores, nor any other individual belonging to the establishment. The storekeeper keeps a book in which he enters the name of every individual to whom old stores are sold, and he charges that individual with the price. The storekeeper in every instance receives the money paid for stores sold on the premises.

(Signed) N. M. GODDARD.

No. 23.

Statement of
Mr. Goddard, taken
19th Nov. 1835.

No. 23.

N. M. Goddard, Esq., Agent.

Holyhead, Nov. 19th, 1835.

Has been 46 years in the service of the Post-office, and on the Holyhead station since the year 1799, having been postmaster and packet-agent for the last 14 years. Mr. Goddard commanded formerly a sailing vessel, but never commanded a steam-vessel. Besides the six steamers on the station for conveying the mails, Mr. Goddard has two vessels kept in ordinary, namely, the "Royal Sovereign," steamer, of 80-horse power, and the "Iris," sailing cutter.

The "Royal Sovereign" is occasionally employed on other stations when packets are under repair. The "Iris," has been at Holyhead since 1823, in ordinary: the "Iris" is about 79 tons. Neither the "Iris" nor the "Royal Sovereign" have ever been employed in bringing stores from Liverpool for the Holyhead station. The stores, when brought from Liverpool,

are conveyed in small vessels of about 30 tons burden, belonging to Holyhead. Mr. Johnstone, the resident engineer, has a share in the vessels thus employed in conveying the stores to and from Liverpool.

The expense attending keeping the "Iris" at Holyhead, since 1823, has been £2,984; her crew consists of a mate in charge, and four men. The crew are always employed to supply coal to the packets, unless when obliged to remove on board for the security of the vessel, when labourers are hired to supply their place.

There are three men attached to the "Royal Sovereign." Mr. Goddard has also a crew of six men, called wherry-men. Two of these wherry-men are in alternate daily attendance at the Post-office; a third may be considered as the agent's orderly, but he takes his turn of duty on the pier. The harbour-master's boat's crew are always ready, day and night, to run out ropes and fasts to the packets. The harbour-master's boat's crew are not paid by the Post-office.

The only accounts sent by the agent to the Post-office respecting stores, are, the monthly expenditure of coal; the monthly abstract account of the receipts and issues of stores, with the quantity remaining; a monthly account of the purposes for which stores have been supplied; and a quarterly account of stores, both new and old, that are sold to private individuals, whether they belong to the establishment or not. In none of these accounts is there any mention made of the quantity received or expended of the following articles, which, with the exception of coal, have composed the principal items of expenditure since the commencement of the Dock-yard Establishment;—viz., boiler-plate, thick; ditto, thin; sheet-iron; angle-iron; old iron. All these stores are received from Liverpool.

All stores for the use of the packets are supplied by an order from the agent, (on the commander's demand,) addressed to either the storekeeper or the resident engineer. The agent judges of the propriety of the commander's demand, and approves of it if he thinks fit.

All the stores requisite to be procured from Liverpool for the establishment at Holyhead are purchased by Mr. Banning, the postmaster of Liverpool, with the exception of brass-work, copper, and those already mentioned as not appearing in the returns to the Post-office;—viz., boiler-plates, thick; ditto, thin; sheet-iron; angle-iron, and cast iron. All which are supplied (without the intervention of Mr. Banning) by direct application to the foundries and iron masters, from either Mr. Goddard or the resident engineer.

Mr. Goddard considers the storekeeper responsible for all the stores; all issues and receipts go through his hands.

The resident engineer and storekeeper select all old stores for sale, and sell them after having obtained the consent of the agent. The storekeeper sends in a monthly and quarterly return of the stores sold, whether old or new, but does not state in his return to whom they are sold.

The Post-office has no mark (as the Admiralty has) or brand on any of their new stores. When an article is made for any packet, or for the service of the dock-yard, it is then stamped; but boiler-plate is never stamped.

The dock-yard at Holyhead is not of sufficient dimensions to contain the stock of timber necessary; the timber is therefore in an open field, outside the yard. There is an old man, as gate-keeper, at the dock-yard gate all day; but there is no person residing in the dock-yard, nor is there any watchman employed during the night: the only protection during the night is from two dogs kept inside. The only persons who have keys of the dock-yard are the agent, storekeeper, and resident engineer.

Since the establishment of a dock-yard at Holyhead, by the Post-office, a private shipwright's building-yard has been formed, and they are now building two large vessels: two steam-vessels, of from 500 to 600 tons, were built there.

The Post-office dock-yard is very inconveniently situated with respect to the graving-dock at Holyhead, from its being at the opposite side of the harbour, causing great loss of time in transporting both materials and workmen across, especially in bad weather. Another great inconvenience occurs at Holyhead in being obliged to put the steam-vessels that are undergoing repair alongside the pier, where they must lie aground dry at low water, besides being exposed, at particular seasons, to strike the ground when a heavy swell is setting into the harbour. It is always of the greatest importance to keep steam-vessels afloat, they strain so much more than any other class of vessels when taking the ground, independent of the injury likely to be sustained by the machinery, although no instance of the kind has occurred at Holyhead with Mr. Goddard's knowledge.

In Mr. Goddard's opinion, four steamers, of more power and with better accommodation than the present ones, would be quite sufficient, at Holyhead, to do the duty of the London mail. The correspondence that arrives by the Chester mail in the morning is of very small amount, and cannot compensate for the expense now incurred in keeping up two extra steam-vessels for the morning despatch.

From Capt. Goddard's long experience on the Holyhead station he is of opinion that, to make Holyhead a desirable packet-station and good asylum for shipping, it will be necessary to run out a breakwater from the north end of Salt Island; this once done, Holyhead would possess every facility requisite for commerce and communication.

(Signed) N. M. GODDARD.

Statement of
Mr. Goddard, taken
19th Nov. 1835.

No. 24.

Statement of
Mr. Goddard, taken
5th Dec. 1835.

No. 24.

*N. M. Goddard, Esq., Postmaster and Agent.**Holyhead, November 20th, 1835.*

When the power of the engines in the Holyhead steam-packets was increased by putting larger cylinders in the vessels, without altering the boilers, an experiment was made at Holyhead between two similar vessels, the "Escape" and the "Dragon," the "Dragon's" cylinders being increased from 80 to 100-horse power,—the "Escape" not having been altered. Before the alteration the speed of the two vessels, and their consumption of fuel, was nearly similar. Mr. Goddard was not on board of either of those vessels during the experiments; but from the reports of both the commanders, the vessel with increased power gained about half an hour in the passage between Holyhead and Howth, the weather being at the time moderate. There was no alteration in the boilers, but the consumption of coal per hour on board the "Dragon," with the increased power, exceeded that of the "Escape". Mr. Goddard says this additional consumption in the same boiler was owing to the necessity of keeping up stronger fires to have an overplus of steam blowing off through the steam-pipe. No alteration ever took place in the "Dragon's" boilers until they were worn out.

When new boilers were placed in the "Dragon," they were made rather smaller than the old ones. Mr. Goddard, not being an engineer, is not aware of the principle upon which the new boilers were constructed; he only knows they were made lower than the old ones, about six inches longer, and that the steam check was diminished. These are the only alterations that took place in the construction of the new boilers within his knowledge. These alterations were adopted at the suggestion of the resident engineer, the Post-office not being consulted.

The present boilers supply a great abundance of steam, even to meet the consumption of increased power. Mr. Goddard cannot otherwise explain the mode of creating this additional quantity of steam than that the flues have been lengthened and more of their surface exposed to the fire. No other alterations in the boilers have taken place with his knowledge.

Boilers are made at Holyhead for all the other Post-office stations, with the exception of Dovor. They are all constructed upon the same principle already described. The resident engineer has also altered the paddles of all the steamers at Holyhead, except those of the "Gulnare." The alteration consists in allowing the floats to enter the water more perpendicularly than formerly, by inclining the paddle-arms at a small angle to the shaft. This contrivance admits the paddles to enter the water with more facility; but they are, at the same time, extracted on the opposite side in a more unfavourable position than formerly. The advantage appears to be in favour of the new arrangement.

Mr. Goddard pays the entire of the expense of the Holyhead station, his clerk paying the establishment of seamen and packet wherry-men, and the storekeeper paying the artificers of the dock-yard, on his receiving from the agent for that purpose a sum of money equal in amount to an abstract of bills for wages for the previous week.

The crews of the four colliers belonging to the Post-office, are paid 3*s.* 3*d.* per ton weight of 28 bushels, for all coal brought by them from Troon to Holyhead. When they convey coal to Kingstown they are paid 5*s.* per ton: they have no other emolument from the Post-office. Should the colliers be under repair, the crew are generally employed fitting the rigging, and get labourer's pay, 2*s.* per diem. The colliers go back from Holyhead in ballast; the ballasting of each vessel costs 8*s.* to the Post-office.

Mr. Goddard was never at Troon, and is not aware of there being any iron foundries at Kilmarnock. He thinks there is a rail-road from Troon to Kilmarnock. He never made any inquiries about whether he could procure iron from Kilmarnock, or whether he could dispose of the old iron of the Holyhead establishment at that place.

Mr. Goddard is ordered by the Post-office to get all his stores from Liverpool.

Freight, at the rate of 4*s.* a-ton, is paid for taking old iron to Liverpool, and 10*s.* a-ton for old brass and copper: He never suggested to the Post-office that the old iron, brass, and copper might be disposed of at Troon, and taken there by the colliers free of freight, answering not only to ballast them, but avoid the expense for ballast at Holyhead. This circumstance never occurred to Mr. Goddard, in consequence of his being ignorant of any iron-foundries being near Troon.

(Signed) N. M. GODDARD.

No. 25.

Statement of
Mr. Goddard, taken
5th Dec. 1835.

No. 25.

*N. M. Goddard, Esq., Agent.**5th December 1835.*

Has given the resident engineer leave to employ the workmen in the dock-yard, after hours, for his own purposes, working up his own materials and paying for the coals. Allows him to carry in iron to work up in the dock-yard, and has also permitted him to take part of the iron belonging to the Post-office, which is intrusted to his charge upon his rendering an account to the storekeeper of the quantity, the iron being weighed by the yeoman of the stores. The iron which Mr. Johnstone takes for his own purposes is not in charge of the yeoman or storekeeper, but of Mr. Johnstone himself. Mr. Goddard has never had any direct or implied authority from the Postmaster-General for permitting Mr. Johnstone to make use of the Post-office stores,

or to employ the workmen for his own private advantage in the dock-yard. Mr. Johnstone has been directed, since the commencement of the present year, not to work up any materials for himself or any other individual in the dock-yard, in consequence of an attempt which has been made by the parish to subject the dock-yard to parochial rates. Stores still continue to be sold to private individuals, and the storekeeper charges not merely a remunerating price but a profit.

With reference to the orders issued by the General Post-office for the guidance of the commanders in bringing their vessels into port, or as to the degree of authority which the commanders have over the engineers, Mr. Goddard does not consider himself in any way responsible, never having been consulted as to their propriety. He issues them to the commanders and sees that they are carried into effect. The "Iris" cutter is now lying in Holyhead harbour for sale. The agent has no instructions as to what price to demand, and has received no orders to make it known that she is for sale. He does not know what price the Post-office would take for her; she may be worth about £500. The Post-office had an offer for her about four or five years ago; she was then worth about £500. She has done no duty within the last five or six years, except carrying Mr. Goddard twice to Portpatrick on duty, and a third time Mr. Freeling and Mr. Goddard.

The "Royal Sovereign" has been twice at Milford within the last 12 months, when she performed duty while the "Vixen" and "Aladdin" were under repair. The boat's crew at Kingstown have no orders whatever. He has never given them any orders, nor have they any written orders. Mr. Goddard states that they are there for the purpose of carrying the mail on shore, which they ought to do under weather of ordinary character, without waiting to assist the packets in taking up their moorings. The commanders have no instructions how to employ this boat, whether to make use of it for securing their vessels, or merely for sending their mails ashore. He has no idea of how this boat's crew is generally employed by the captains, other than by their affording all assistance in their power to the packets when called on for that purpose.

Mr. Goddard does not think that any blame can be attached to either the captains or the boat's crew for securing the vessel first before landing the mails. He does not suppose that the custom of the harbour was such as to induce the commander to send the mails ashore first before securing the vessel with the help of the mail boats.

(Signed) N. M. GODDARD.

No. 26.

N. M. Goddard, Esq., Agent.

Holyhead, December 7, 1835.

Was not aware that the gate-keeper could not read or write. Is of opinion that the gate-keeper is unqualified for the duty he has to perform if he cannot read or write. It is Mr. Goddard's duty to see that officers of the dock-yard are qualified for the situation in which they are placed. He was not aware, until Friday or Saturday, that the storekeeper had given the key of the coal stores to a person of the name of Hugh Hughes. Was not previously aware that there were two keys for the coal stores. Never granted permission to have a duplicate key made. Is now aware that there is a duplicate key.

A few days ago he also became aware that the gate-keeper had a key of the dock-yard. Believes that he has had this key for two years in his possession. Is aware that the gate-keeper has been selling oakum to several people.

Is not aware whether it is Hugh Hughes the father, or Hugh Hughes the son, who keeps the key of the coal yard, both of those persons being employed in the coal store.

Mr. Goddard cannot vouch for the accuracy of the books kept by the storekeeper, and considers him the only responsible person for them. The resident engineer is also solely responsible for his books. Mr. Goddard keeps no books himself, with the exception of the freight book and the agent's quarterly account book. This quarterly account book is a summary of the eight forms of account transmitted to the General Post-office, and which forms the general quarterly account. Has not hitherto examined any books or accounts kept by the storekeeper or resident engineer, with a view of ascertaining their accuracy, with the exception of the invoice book, which he is in the habit of looking at to see that the invoices are correctly entered. There is no book from which the amount of the receipt of engineer's stores can be made out, with the exception of the invoice book. If the quantity of material received into store for any particular period was extracted from the invoice book, there is no book kept that will show how this material has been expended, save and except the statement of issues from the storekeeper, in lump, for building and repairs of boilers, or doing any other work; and excepting the charge from the blacksmith's book for all wrought iron work supplied to the different vessels, either belonging to this station, or to those which are in the course of being repaired here, when sent from other stations for that purpose.

No. 27.

N. M. Goddard, Esq., Packet Agent.

Holyhead, December 10, 1835.

Mr. Banning, the postmaster at Liverpool, is *responsible for the quality and prices of the stores* purchased by him for the use of the packets at Holyhead. If any complaint is made, Mr. Goddard takes notice of it, not otherwise. The storekeeper is the person responsible for the books and accounts relative to the stores. The storekeeper and engineer are responsible for the labourers and the artificers in their respective departments. The only accounts sent to Mr. Goddard, are the invoices of the different stores purchased for the use of the packet establishment. He frequently inspects the copies of the invoices in the invoice book. A summary is made of the amount contained in the invoices and transmitted to London for the purpose of enabling him to receive an imprest to pay the bills. Has never had any information from Mr. Banning as to whether the oil was supplied by the old gallon or the new imperial gallon. They have been in the habit of using the old measure in the dock-yard, and use it up to the present moment. The account sent up to the Post-office of the expenditure of oil does not show the number of imperial gallons used, but the number of old gallons. For nine years and a half previous to 1831, they used a measure, which, in place of containing a gallon, contained nearly $\frac{1}{4}$ of a gallon; and they discovered this upon taking stock, and finding a deficiency of 316 gallons. This old gallon measure was made in Holyhead and not stamped. The present gallon measure was also made in Holyhead, and is likewise not stamped. After using this new gallon measure for a few years, on taking stock, they found an overplus of 230 gallons. This was owing to sediment in the measure. The rope was weighed at the same time, and there was found to be a deficiency of only one cwt. and a half, in the course of nine and a half years, which was exceedingly satisfactory, as the rope bands weighed with the rope would have more than counterbalanced the deficiency.

Mr. Goddard is postmaster at Holyhead, but has a clerk who does all the duty for him there, with the assistance of two of the packet wherry-men. Mr. Goddard never attends, excepting in the absence of Mr. Jones (his clerk). Mr. Jones does not live at the Post-office, but one of the packet wherry-men attends and sleeps there. The salary of the postmaster here is only £70, and there are no emoluments attached to the office.

As agent, Mr. Goddard receives an allowance of £60 for office rent, coals, and candles, &c., and £10 for stationery, and an allowance of £430 per annum for himself and clerk.

Mr. Goddard generally attends when the packets sail in the morning, and when they arrive in the afternoon; but, in some few instances, has attended their departure in the middle of the night, since the experiment of sending the London mail to Ireland by the Liverpool packets in the year 1826.

Has had no occasion to represent to the Post-office any alterations which have taken place in the engines or boilers here, previous to their being carried into effect, but depends upon the skill of the engineer, and permits him to make whatever alterations he may consider useful or necessary. The only material alteration which has taken place, and which has been represented to the Post-office is, the inclination in the arms of the paddle-wheels from the centre to the periphery; no representation was made to the Post-office respecting the alteration in the boilers; the only change made in them was merely heightening the flues, and by that means exposing a greater surface to the heat.

The usual allowance to a commander absent from the station on duty is one guinea a-day, and he never remembers to have heard of any commander receiving less, with the exception of Captain Davies.

Mr. Goddard remembers the circumstance of Harvey being unable to start the engine on board Captain Duncan's vessel in 1826. Has not a doubt that he was in conversation with Captain Duncan on the pier, or on the deck of the vessel, when Harvey was attempting to start the engine.

Mr. Goddard looked at the package of newspapers which Captain Grey lately refused to take on board the "Escape," and found that the contents of the package did not appear to be damaged; the cover had got wet and was rubbed a little on its way down. Captain Grey was not justified in refusing this parcel. Mr. Goddard was not aware that the news agent at Dublin had been put to the expense of £8 or £9 in consequence of not receiving his newspapers. Captain Grey's is the only instance of a commander having refused to receive a parcel of any description on board.

(Signed)

N. M. GODDARD.

No. 28.

Statement of
Mr. Goddard, taken
14th Dec. 1835.

No. 28.

N. M. Goddard, Esq., Agent.

Holyhead, Dec. 14, 1835.

Is not responsible for the issue of stores, for the receipt of stores, for the quality or price of stores, for the labour accounts, for the storekeeper's accounts, nor for anything connected with the engine department. There is not a single book kept in the dock-yard for the accuracy of which he can answer.

The stores got from Liverpool are not ordered from the wholesale dealers by Mr. Goddard, with the exception of boiler-plate, angle-iron, and copper and brass work; and these are occasionally ordered by the resident engineer.

Mr. Goddard's accounts do not show the stores worked and appropriated to each vessel, and he does not know if the accounts which show this are accurate in detail.

When the Holyhead packets were altered in 1830, the work was all done by Johnstone the resident engineer, and his workmen, at Holyhead. The only persons employed on the Holyhead station, who are paid by Mr. Goddard himself, are the commanders, the resident engineer, and the storekeeper, and the plyer in Dublin, and the boatmen in Kingstown. In Liverpool every thing ordered by Mr. Banning for the Holyhead station is paid by him. Mr. Goddard takes no pains of checking the storekeeper's accounts of stores issued.

Mr. Provis has been in the habit of getting a supply of such things as he might require for the works under his superintendence here. When Mr. Goddard was in the way Mr. Provis has occasionally made application to him, and he did not hesitate to give him anything he required for the use of the public department over which he had the control. If Mr. Provis required any iron, or smith's coals, he got it by applying to the resident engineer, who informed Mr. Goddard of any thing he supplied, and which he did entirely with Mr. Goddard's consent. Never received one farthing from Mr. Johnstone for work done for Mr. Provis, or stores supplied by him to Mr. Provis.

Mr. Goddard has never received any money for labour performed in the dock-yard, nor has any credit been given to the Post-office for labour performed for Mr. Provis, or any other individual, by workmen in their employ.

(Signed) NORRIS M. GODDARD.

No. 28.

Statement of
Mr. Goddard,
taken 14th Dec.
1835.

No. 29.

Norris M. Goddard, Esq., Agent.
Holyhead, 22d December 1835.

The pass-books of the mates and engineers ought to contain every thing supplied for the packets while on service. Whilst the vessels are under repair there is no check kept of the issues of iron and timber, which can only be ascertained from the accounts kept by the resident engineer and storekeeper.

Mr. Goddard does not remember a single instance of lending or borrowing stores from the Post-office yard, with the exception of coals, which have been occasionally supplied to Mr. Provis, he repaying them in kind when he got a cargo. His directions have been not to give any thing out of store to individuals without receiving payment in money, and not to borrow, but to purchase whatever they required from tradesmen in the town.

It has been occasionally necessary to get a few articles which they had not in store from Owen Pritchard, a tradesman in Holyhead; such things as files, locks, cooking utensils, fire-bricks, and steel of different kinds, and small quantities of iron. Every article got from Owen Pritchard has been regularly paid for by Mr. Goddard.

Timber has generally been purchased by Mr. Goddard himself from a person of the name of Griffith. Roberts, the storekeeper, assisted in making these purchases, and was consulted by Mr. Goddard as to whether the timber he was in treaty for would be serviceable. He knew that Roberts was employed by Griffiths as an agent for the sale of his timber. Timber has not been bought from Roberts himself, but some small pieces may have been purchased from his brother.

Mr. Goddard has bought canvas from Roberts, the storekeeper.
(Signed) NORRIS M. GODDARD.

No. 29.

Statement of
Mr. Goddard,
22d Dec. 1835.

No. 30.

Norris M. Goddard, Esq., Agent.
Holyhead, 24th December 1835.

Has permitted Mr. Johnstone to have part of his papers removed from the resident engineer's office since his suspension. The papers removed had the appearance of private letters, and were under a dozen in number. After what has occurred here in the resident engineer's and storekeeper's department, Mr. Goddard will not vouch for the accuracy of any of their accounts, and consequently any returns which have been made relative to the expenditure on this station cannot be relied upon.

The two cases which Mr. Goddard had brought under his notice relative to the sale of stores to Mr. Provis, and in one of which the resident engineer was implicated, in the other the storekeeper, appeared to him to bear the marks of dishonesty. He asked for an explanation from each of them, but could receive no satisfactory account of the transactions; he consequently suspended them until he should receive further directions from the Postmaster-General for his guidance.

With respect to the smith's coals sold to Mr. Provis and not accounted for in the quarterly accounts, Mr. Goddard states that he permitted Johnstone to lend smith's coals, repaying it in kind when convenient for himself on the arrival of cargo; and he further states that there was no check kept of the quantity of coal thus lent by Mr. Johnston or of the quantity returned by him into store.

He has been all along aware that Mr. Johnstone had not made the drawings in the drawing-book in the engineer's office, nor does he suppose him capable of doing them. The drawings were executed by Joseph Green, a fitting smith.

(Signed) NORRIS M. GODDARD.

Captain Goddard,
24th Dec. 1835.

No. 31.

Statement of
Mr. R. Roberts,
13th Nov. 1835.

No. 31.

Mr. Rowland Roberts, Storekeeper.

Holyhead, 13th November 1835.

Has charge of all the stores, and superintends the carpenters, joiners, and the labourers who are not under the orders of the engineers. The whole of the land establishment are paid their salaries weekly by the storekeeper. An account of the number of hours each person is employed, and the work upon which they are employed, is kept. A separate charge is made against each packet for the amount of labour performed, and the value, being calculated, appears in the statements of the expenditure of each packet. All the stores required for the establishment at Holyhead are supplied from Liverpool, with the exception of the coals, which are brought from Scotland, and part of the timber. Oak is purchased in Denbighshire, and the fir is got from the merchants in Holyhead.

The storekeeper carefully examines the invoices sent with the stores, in order to check both the quantities and the prices charged. After having the articles measured or weighed, he signs the invoices and returns them to the agent. Has never had occasion to make any remark upon the charges, which are, in his opinion, moderate, nor did he ever find any deficiency in the quantity. Has instructions to see that everything supplied is of the best quality, and to report to the agent if it is not so.

There are four sailing vessels on the station which are employed in bringing coals for the packets, which keeps them in constant work: they carry from 110 to 130 tons each, and make about 20 voyages a-year to the Troon from whence all the coals are brought. The crews of these sailing vessels have no salaries, but are paid so much a-ton on the freight.

When any stores are requisite for the vessel, beyond articles of ordinary consumption, a demand must be made to the agent, who gives directions to the storekeeper to supply them. Small stores, coals, &c., are supplied by the storekeeper on application from the captain, or engineer, who keeps a book in which the articles supplied are entered. Before anything can be conveyed from the store, a pass must be signed by the storekeeper, without which they cannot pass through the gate. Iron-work is given out by an order from the engineer, and this order is brought to the storekeeper's office as a check upon the engineer's account.

The books kept by the storekeeper contain a separate and most minute account of everything expended upon the packets here, both for those belonging to this station and the other stations which come here to be repaired.

ROWLAND ROBERTS.

No. 32.

Statement of
Mr. R. Roberts,
16th Nov. 1835.

No. 32.

Mr. Rowland Roberts, Storekeeper.

Holyhead, 16th Nov. 1835.

Has been storekeeper at Holyhead since 1822; keeps all the accounts of the receipts and issue of stores, and has the charge of everything supplied for the dock-yard, with the exception of some brass castings which are kept by the resident engineer. In addition to his duties as storekeeper, Mr. Roberts has the superintendence of all the shipwrights, carpenters, joiners, and other labourers not employed in the engineers' department.

Mr. Roberts is not enabled to be present upon all occasions when stores are issued, having to superintend the workmen who may be employed in executing any repairs on the packets.

He considers himself responsible for all the stores in the dock-yard; has a clerk, to whom they are intrusted in his absence. Mr. Roberts is entirely occupied in the Post-office service, and has no other employment from which he derives any emolument.

All articles of ordinary consumption, such as coal, oil, tallow, &c., are furnished to the packets without any written order. The storekeeper takes no receipt for anything issued out of the store.

The entries in the day-book, under the head of spared stores, are for stores which have been supplied to individuals on application made to the storekeeper. Spared stores are issued in this manner to people in the dock-yard, and, when supplied to them, it is done by the storekeeper without any written order from the agent, and the agent is not in general made acquainted with supplies which may have been made to persons on the establishment.

In January last the agent issued an order to the storekeeper directing that he should not supply stores of any description to any private individuals without receiving an express order. Notwithstanding this order of the agent, the storekeeper continues to issue spared stores in exactly the same manner as he did before, without any directions from the agent.

It is the duty of the storekeeper to see that everything supplied is of the best quality, and that the quantity delivered corresponds with the invoices.

The stores are purchased in Liverpool by the postmaster there, and brought round to Holyhead in small coasting vessels. The vessels generally employed for conveying stores are the "Echo," the "Gleaner," and the "Lord Edward." Mr. Johnstone, the resident engineer, is owner or part proprietor of the "Echo" and "Gleaner." The "Echo" and "Gleaner" have lately been employed in conveying stores from Liverpool for the dock-yard.

Mr. Roberts is not a ship-owner, nor does he carry on any trade in Holyhead.

(Signed)

ROWLAND ROBERTS.

No. 33.

Mr. Roberts, Storekeeper,

Holyhead, 17th Nov. 1835.

Desires to make an explanation of a statement which he made yesterday, and repeated to-day, with respect to 11 tons 18 cwt. of iron sold in June last, entered in his books as sold to Mr. Johnstone, and which he said Mr. Johnstone had paid him for. It was not Mr. Johnstone, the resident engineer, but Hugh Douglas, one of the blacksmiths in the yard, who paid for the greater part of this iron, viz., 11 tons 10 cwt. of it. The remaining 8 cwt. was sold to two farmers. The old iron and old copper is always weighed by Mr. Johnstone, the resident engineer, who gives the storekeeper a note of the quantity. The reason for charging this iron to Mr. Johnstone, and not to the blacksmith and two farmers who bought it, was to save trouble. The blacksmith paid for this iron £46, and the remaining £1. 12s. was paid by the two farmers. A pass is given to the gatekeeper before any stores are sent out of the dock-yard, and his instructions are not to allow anything to go through the gate which is not inserted in this pass. This pass is signed by Mr. Roberts, or, in his absence, by the clerk or yeoman of the stores. No pass is given for old iron. It is by no means a usual thing to have such a large quantity of spared stores sold to any blacksmith or other labourer as was done upon this occasion.

(Signed) ROWLAND ROBERTS.

No. 33.

Statement of Mr. R. Roberts, 17th Nov. 1835.

No. 34.

Mr. Roberts, Storekeeper.

Holyhead, 19th November, 1835.

Mr. Roberts is allowed, by permission of the agent, to take stores from the dock-yard for his own use, charging himself the proper price. He is likewise allowed to supply private individuals, as well as those belonging to the Post-office Establishment, with any stores they require, by paying the price fixed by the agent. He keeps an account of the stores thus spared in the day-book, with the name of the person to whom they are spared. The old stores that are not sold at Holyhead are sent to Liverpool. The resident engineer, Mr. Johnstone, selects the old iron for sale, and weighs it. Mr. Johnstone gives an account of the weight of the iron thus selected to the storekeeper. Mr. Johnstone, as will be seen in the day-book, often purchases old iron, stores, &c. &c. On the 30th of June, 1835, appears the following entry:—

“ Spared 11 tons, 18 cwt. of old iron to Mr. Johnstone.”

Mr. Roberts says there was a mistake in this entry, although he twice before stated it to be correct. The iron was bought and paid for by Hugh Douglas, one of the blacksmiths of the dock-yard.

The old iron and stores that are sent for sale to Liverpool are generally taken in vessels partly belonging to Mr. Johnstone, the resident engineer, and partly belonging to shopkeepers of Holyhead.

None of the new stores supplied for the use of the establishment at Holyhead are branded or marked before they are manufactured, either for the use of the packets or the dock-yard.

G. P. O., or the broad-arrow, is branded on all wood work; boiler-plates, rivet-iron, &c. are never branded; iron-work for the use of the packets when manufactured, with the exception of the boilers, is branded.

The greater part of the timber belonging to the dock-yard is in an open field outside of the yard. It is not branded, nor is there any watch over it during the night. No person resides in the dock-yard, nor is there any watchman on the premises during the night. The outer gate is kept locked, and a couple of dogs are left loose in the yard.

Since the establishment of a dock-yard at Holyhead by the Post-office, a shipwright's building-yard has been formed there, and there are at present two large vessels building at the private yard. Two large steamers were previously built there.

The storekeeper never receives any receipts from the captain, or any of the officers of the packets, for stores supplied to them. He sends to the agent a weekly and monthly account of the expenditure of coal; a monthly account of the expenditure of other stores shewing the remains in store, a monthly account shewing the application to use of stores, and a quarterly account of all stores, whether new or old, that have been sold out of the dock-yard.

The storekeeper furnishes no account to the agent, nor, to his knowledge, is there any furnished to the Post-office, of the receipts, expenditure, or remains in store of the following articles, which, with the exception of coal, form the greatest items of expenditure in the establishment:—

- Boiler plates (thick).
- Boiler plates (thin).
- Angle iron.
- Cast iron.
- Engineers' and workmen's tools.
- Old iron.

The above articles are never branded, except the tools, and the storekeeper does not consider them under his charge.

Mr. Roberts says, the “ Iris” sailing cutter has never been employed in bringing him stores from Liverpool. Small vessels of about half her burden have been employed.

The invoice book shews that, independent of freight, the stores have been insured at Liverpool. Any stores wanting at Holyhead, for immediate use, are sent from Liverpool to

No. 34.

Statement of Mr. Roberts, 19th Nov. 1835.

No. 34.

Statement of
Mr. Rowland
Roberts,
Nov. 19, 1835.

Kingstown and thence back in the Post-office packets. By this means freight and insurance are saved, but it is only adopted when articles are wanted in a hurry.

Shipwrights and carpenters are only occasionally employed in the dock-yard, but there is a blockmaster and a joiner on the permanent establishment.

All stores issued from the dock-yard are accompanied by a pass to the gatekeeper; this pass is either given by the storekeeper, the resident engineer, or the storekeeper's clerk. All stores sold, whether new or old, are sent out without a pass.

All iron work and castings are weighed by the resident engineer when received into store, and he supplies the storekeeper with the weight. The freight from Liverpool is paid by weight:—10s. per ton on iron, 15s. a ton for rope, 10s. a ton for tallow, 15s. a ton for brass, and other stores in proportion.

The coals are brought from Troon by vessels belonging to the Post-office. There are four of them, and there are twenty-four men belonging to them: these men are not paid by the storekeeper. When the vessels arrive, the storekeeper hires labourers to cart the coals to the store at 5d. per ton. The coal is measured on board the vessels while they are discharging.

When coal is supplied to the packets from the store the carts are filled by the crew of the "Iris," and then drawn by horses to the packets. John Thomas, of Holyhead, contracts to supply horses for this work: he is not paid by the storekeeper, but by the agent.

(Signed) ROWLAND ROBERTS.

No. 35.

Statement of
Mr. Rowland
Roberts,
Dec. 1, 1835.

No. 35.

Mr. Rowland Roberts, Storekeeper.

Holyhead, 1st December 1835.

Timber is sometimes sold out of the dock-yard, but in very small quantities. Mr. Roberts does not sell timber, and has not been a timber-merchant. He has occasionally sold timber for others; about twelve months ago, Mr. Roberts sold the greater part of a cargo of timber for a friend of his, who sent a vessel round from Conway here. Richard Griffiths was the owner of this cargo. It is from him that the timber required for the dock-yard is generally purchased. Mr. Goddard makes an agreement with Mr. Griffiths about the price, and when the purchase is completed the timber is delivered to Mr. Roberts, who measures it, in order to ascertain if the invoice is correct. The invoice, after receiving his signature, is sent to the agent who then pays the amount of the bill.

Mr. Roberts may have sold some timber last year, partly on his brother's account, also some on his own. Has been in the habit of selling timber for the last eight years. His brother is a joiner occasionally employed in the dock-yard. Mr. Roberts makes out bills for his brother in his own name, and the timber might in this way appear to have been sold by him, when, in fact, it was not his. He takes the money and signs the receipts in his own name, also for his brother. His brother has no timber-yard, and his dealings are very small. Mr. Roberts himself never sold timber in large quantities; has sold as much as £60 worth at a time to people building mills in the neighbourhood. He has also sold considerable quantities of timber to Mr. Watson, who is the only ship-builder in Holyhead. Believes he has sold as much English timber as any other person in Holyhead. There is no other timber merchant in Holyhead who sells English timber.

About a quarter of a mile from Holyhead Mr. Roberts has a farm of forty or fifty acres, but he does not reside there but at a public-house which he keeps in the town.

(Signed) ROWLAND ROBERTS.

No. 36.

Statement of
Mr. Rowland
Roberts,
Dec. 4, 1835.

No. 36.

Mr. Rowland Roberts, Storekeeper.

Holyhead, 4th December 1835.

Besides the three Liverpool traders, of which Mr. Johnstone, the resident engineer, is a principal proprietor, there are two other regular traders between Holyhead and Liverpool, viz., the "Endeavour" and the "Industry." These vessels are equally as sea-worthy as Mr. Johnstone's vessels, but are not generally employed for the conveyance of the Post-office stores. They are sometimes, however, and have, within the last twelve months, received freight to the amount of 6s. for the conveyance of stores.

Mr. Roberts is not aware of the reason of this; he does not suppose the freight would be higher by them, and feels satisfied that the goods would be conveyed with the same safety and despatch as by Mr. Johnstone's vessels.

(Signed) ROWLAND ROBERTS.

No. 37.

Statement of
Mr. Robert Roberts,
Nov. 19, 1835.

No. 37.

Holyhead, 19th November 1835.

Has been four years clerk to Mr. Rowland Roberts, the storekeeper. All the books and accounts relative to the stores are kept by him, and are in his handwriting. He can vouch for the correctness of the entries in the day-book, as he generally issues the stores himself; sometimes it is done by the yeoman of the store. The only accounts that are sent from the storekeeper to the agent are the weekly expenditure of coal, the monthly expenditure of stores, and the quarterly account of stores spared to private individuals.

There is never any account sent to the Post-office of the quantity received or issued of the following stores, nor of the remains in store, although they are the most expensive of all others except coal, viz.:—

Boiler plate, thick.
Do. do. thin.
Sheet iron.
Angle iron.
Old iron.

No. 37.
Statement of
Mr. Robert Roberts,
Nov. 19, 1835.

Articles of the above description are received from Liverpool by small coasting vessels, and all the old iron that is not sold at Holyhead is sent for sale to Liverpool. The resident engineer selects what iron is to be sold, and weighs it, giving an account of the weight to the storekeeper. The resident engineer frequently (as seen by the day-book which Mr. Roberts keeps) purchases old iron, stores, &c. The coasting vessels that convey the old stores to Liverpool, and bring back the new stores, are partly the property of the resident engineer.

Mr. Robert Roberts frequently passes stores out of the dock-yard, in the absence of the storekeeper, for the use of the packets.

The old iron, stores, &c., which are disposed of at Holyhead, are sold either by the storekeeper or the resident engineer. The agent, Mr. Goddard, does not attend the sale of old stores. The money is generally paid either to the resident engineer, the storekeeper, or Mr. Robert Roberts. An account of the quantity sold, and the money received, is sent by the storekeeper to the agent, who transmits it in the quarterly account of spared stores to the Post-office.

All private individuals may, by application to the storekeeper or resident engineer, purchase anything they require out of the store at the proper fixed price.

There is no person residing in the dock-yard, nor is there any watchman during the night.

All the spars for masts, planks, oak, &c., lie outside the dock-yard, very few planks being kept inside. There is no watchman to look after the wood during the night.

There is a shipwright's building yard not far from the Post-office dock-yard, which has been established since the Post-office have erected their workshops, &c. Two large vessels are now building there.

(Signed) ROBERT ROBERTS.

No. 38.

No. 38.

Mr. Robert Roberts, Storekeeper's Clerk.

Holyhead, 21st December, 1835.

The spared stores were not always entered in the day-book, but Mr. Rowland Roberts, the storekeeper, took a memorandum of what were not entered, which he kept privately. Robert Roberts had no access to these memorandums, although he kept all the books, and made out the monthly and quarterly accounts sent to the agent for transmission to the General Post-office.

Mr. Goddard has at times purchased iron from Owen Pritchard for the stores. Everything received into store from Owen Pritchard was checked by Roberts when the bill was sent in. The yeoman of the stores entered in his daily receipt-book whatever was received from tradesmen at Holyhead. Everything sent in by them into store was regularly charged in their bills, and paid by the agent with the other quarterly accounts.

(Signed) ROBERT ROBERTS.

No. 39.

No. 39.

Mr. Robert Roberts, Storekeeper's Clerk.

Holyhead.

Has seen Mr. Johnstone's bill to Mr. Spencer for coal, dated the 2d of January, 1836. Says that he is sure the smith's coal was issued out of the Post-office stores. The coal was issued by the labourers, no other person being present; one of the labourers, Richard Rowland, gave him an account of the smith's coal delivered to Mr. Spencer.

He never made any entry of the coal sold by Mr. Johnstone out of the stores, except in a memorandum which he always destroyed when Mr. Johnstone told him the coals were returned. Neither such issues nor receipts were ever entered in the Post-office account-books.

Mr. Roberts had no other means of ascertaining that the quantity of coal sold out of the stores by Mr. Johnstone was returned by him than Mr. Johnstone's own statement that he had done so.

Mr. Johnstone was in the habit of sending private individuals to the stores for coal and iron without having permission from the storekeeper, nor were any other than verbal orders sent on such occasions by Mr. Johnstone. His verbal order was always complied with, and no check kept except the memorandums above alluded to which have always been destroyed.

When the storekeeper sold any of the stores to private individuals, Mr. Roberts was ordered not to enter those sales in the Post-office accounts, but to keep a private memorandum of them. Those memorandums have been also destroyed by the storekeeper, who informed Mr. Roberts he had done so when applied to for them.

When coal was sold out of the large yard, Hugh Hughes always sent in to Mr. Roberts an account of the quantity delivered. Hugh Hughes is the labourer or craneman who had charge of the coal, and always had a key of the coal-yard in his possession day and night. Coals are supplied out of the yard every night to the packets; no other person in charge attends the delivery of coal, day or night, but Hugh Hughes.

Mr. Johnstone's verbal orders for the issue of stores for sale to private individuals were always given to the labourers, or the persons that came for the articles, and the quantity thus

Statement of
Mr. Robert Roberts.

No. 39.

Statement of
Mr. Robert Roberts.

supplied was reported by Mr. Johnstone to the storekeeper at his discretion. The labourers employed in the dock-yard are principally taken into the yard by Mr. Johnstone, and these are the men employed by him to return any stores that he may have borrowed, or to check the issue of any stores that he may have sold.

(Signed) ROBERT ROBERTS.

No. 40.

Statement of
Mr. Robert Roberts.

No. 40.

Mr. Robert Roberts, Storekeeper's Clerk,

Takes round a list of the persons employed in the dock-yard every morning, and checks the numbers of the men. Has got no list this morning. Does not know the number of the men at work in the yard to-day, nor ever knew the number of men at work until he received the weekly accounts from Mr. Johnstone. He states, however, that he ascertains the number of men every morning, but never calls them over by name, counts them, or carries any list with him to let him know whether they are there. Has no means of ascertaining how the men are employed until he gets the lists at the end of the week from the foremen of the different gangs.

Until within the last six weeks they have used a measure for serving the oil out to the packets, containing only three quarts. The oil has been received into store by the imperial gallon, which contains four quarts, but served out by their own gallon, containing only three quarts. Keeps the books, and makes entries of the number of gallons received into store and issued to the packets. At the end of each month a balance is struck, and the quantity remaining in store ascertained by deducting the number of gallons issued from the number of gallons received. This account is forwarded through the agent to the Post-office.

No account is shewn of the conversion of the imperial gallon into the smaller measure they use as a gallon, as they do in the case of the issue of coals where the ton received contains 32 bushels, and the ton issued only 28 bushels.

Oil is allowed to be sold to private individuals out of the dock-yard, and the storekeeper receives the price. The tallow is always weighed to the engineers. Whenever any stores are wanted by the resident engineer, he comes and takes them himself, leaving an account of what he has taken to be entered in the day-book.

Mr. Robert Roberts, Clerk to Rowland Roberts, the late Storekeeper,

States that Mr. Roberts, the late storekeeper, took away from the office the memorandum book now produced, which book contained, when he, Mr. Rowland Roberts, took it away, sundry items of account relating to the sale of stores belonging to the Post-office; that Mr. Rowland Roberts subsequently returned the said book, and, when so returned, there had been several leaves, containing the account of the said stores, taken out of it.

(Signed) ROBERT ROBERTS, Clerk.

No. 42.

Statement of
Mr. Owen Thomas,
Dec. 6, 1831.

No. 42.

Owen Thomas, Gatekeeper,

Holyhead, 6th December 1835.

Is gatekeeper at the dock-yard. There is no muster of the labourers or workmen of the dock-yard, either coming in or going out. No search is ever made of the men, nor are there any orders to search or prevent any person belonging to the dock-yard from going in and out as they please,

During the last three years no stores have gone out of the dock-yard without a pass. The passes are always given to the gatekeeper before the stores are allowed to go out of the dock-yard. The gatekeeper sees that the quantity of stores delivered out of the yard corresponds with what is inserted in the pass. The way he knows that the articles going out are inserted in the pass is by the person taking them out telling him that they are so inserted; as he cannot read or write English, he has no other means of ascertaining.

States that there is nothing sold in the dock-yard to his knowledge. He has never received any pass for things sold in the dock-yard.

Does not know what the number of men may be in the dock-yard; any person who tells him that he is a labourer there is allowed to pass. The number of men vary perhaps from 50 to 150. He has no means of ascertaining how the men are employed in the dock-yard. When either artificers or labourers are employed in the dock-yard on private work for Mr. Roberts, or Mr. Johnstone, they are allowed to pass in and out the same as the dock-yard labourers, upon mentioning to the gatekeeper that they are going to work for the resident engineer or the storekeeper. The men who do the private work in the dock-yard, for Mr. Roberts or Mr. Johnstone, are the labourers and artificers who are frequently employed in the dock-yard. He never passed any iron belonging to Mr. Johnstone into the yard. No pass is ever sent with articles manufactured by Mr. Johnstone or Mr. Roberts for their own emolument. Such articles are manufactured with the tools belonging to the dock-yard. Those labourers employed by Mr. Johnstone or Mr. Roberts are never searched. Has observed, all through this summer, the number of labourers and artificers going in to be employed on private work by Mr. Johnstone. Always told him the number, in order that he may stop their time, and not charge it to the Post-office. Has never sold or bought anything forming part of the Post-office stores, and never had any old stores in his possession. Never sold anything for any other person. Keeps no shop in the town, and has had no source of emolument beyond his wages of 15s. a-week since

he became gatekeeper. Never sold any oakum to Captain William Owen of the "Stanley." Recollects having sold about 20lbs. to him at 2½d. per lb. Never got any junk from Mr. Goddard, or Mr. Roberts, or any other persons connected with the stores.

Hugh Douglas, Blacksmith,

Holyhead, 19th November 1835.

Has been employed in the Post-office dock-yard nine years as blacksmith. Recollects getting leave of absence in the end of the year 1832 to go to Scotland. He got leave of absence to go to Scotland this present year; thinks it was in the month of August. Bought some old iron from the resident engineer—about 11 tons 10 cwt.—and paid the storekeeper for it. He is sure he paid the storekeeper £46. He paid him at two separate times, and received a receipt for the amount of the payment from the storekeeper. He says the iron was for his brother, who lives in Scotland close to Kilmarnock, who is also a blacksmith. His name is William Douglas. The money was sent to Hugh Douglas by his brother from Scotland. The iron was sent to Troon by the "Countess," one of the Post-office colliers, and was taken as ballast, no freight being paid. The scrap iron he bought was sent to Kilmarnock, where there is a scrap iron foundry. Kilmarnock is about nine miles from Troon, and there is a railway from Troon to Kilmarnock. He has no recollection of the time he bought the iron, but he thinks it was about the beginning of this year. He was absent this year, on leave, in Scotland, about 11 or 12 days. He is quite sure he bought the iron before he went on leave this year, and says his pay was not stopped while he was on leave: he received his full pay on his return. He is paid £1. 15s. a-week, as head blacksmith. He says that he makes up, by working during extra hours and sometimes on Sundays, for the time lost during his absence, and he never receives any extra pay, although he is subject to be called on at all hours day or night.

States that no iron is delivered out of the store to any person but himself. Receives whatever may be required by direction of Mr. Johnstone, and has the charge of all the iron issued from the store.

Is well acquainted with the collieries in the neighbourhood of the Troon. The nearest to the harbour is Colonel Boyle's, called the Shotton Colliery. No coals are ever brought for the packets from this colliery. The works at the Troon collieries are very extensive, and vessels can never be put to any inconvenience in getting their freight on board. They have always an abundant supply at the pit's mouth, and could, from any of the collieries, send down more coals than a vessel could take on board before she had time to get out her ballast. Troon coals don't answer for the blacksmith's shop.

and Hugh Hughes,
Jan. 11, 1836.

No. 48.

Owen Thomas

Holyhead, 11th January 1836.

Is blacksmith with Mr. Spencer at Holyhead; has seen Mr. Johnstone's bill for coal, dated as follows:—

July 15, 1835,—	One ton of smiths' coal	.	.	0	17	0
Aug. 17, "	One ton of do.	.	.	0	17	0
Sept. 23, "	One ton of do.	.	.	0	17	0
Oct. 8, "	One ton of do.	.	.	0	17	0
Nov. 30, "	Fourteen tons of do.	.	.	11	18	0

£15 6 0

Owen Thomas went himself for two tons of the smiths' coal, and declares he got it delivered to him from the Post-office stores, by Richard Rowlands and others of the store labourers. Owen Thomas was ordered, verbally, by Mr. Johnstone, the resident engineer, to go to Richard Rowlands and get the coals. Owen Thomas gave no receipt for the coal, nor was there any person but the labourers present when the coal was delivered to Owen Thomas.

(Signed)

OWEN THOMAS.

Witness—THOS. M'KNIGHT.

John Jones

Is carter to Mr. Spencer, and brought one ton and a half of the smiths' coal stated in Mr. Johnstone's bill, from the Post-office coal-yard. The coal was delivered to him by the labourers of the yard.

(Signed)

JOHN JONES, × his mark.

Witness { THOS. M'KNIGHT.
ROBT. SPENCER.

Richard Rowlands

Is a labourer in the Post-office stores; has seen Mr. Johnstone's bill, and states that he delivered the four tons of smiths' coal to Mr. Spencer's smith and carters. He delivered part of the coal from the store depôt in the yard, and part from the large yard outside, where the coal for the packets is kept. Richard Rowlands was present when the coal was measured, and he is quite certain he gave an account of the quantity delivered, to Mr. Robert Roberts, the storekeeper's clerk.

Richard Rowlands never gives any account of the quantity of coal received into store, nor was he ever told that the quantity taken away for Mr. Spencer was returned.

(Signed)

RICHD. ROWLANDS, × his mark.

Witness { THOS. M'KNIGHT.
ROBERT SPENCER.

Hugh Hughes

States he has a key of the coal-yard, and gives an account of the coal delivered to the packets as well as that sold to private individuals to Mr. Roberts, the storekeeper's clerk.

He does not attend the delivery from the yard, but is always on the pier head, checking the number of carts supplied to the packets.

Cannot say whether any coal was taken out of the yard while he was on the pier head, but any quantity might be taken without his knowledge.

If any person came to Hughes and said he was sent by Mr. Johnstone, the coal was immediately given to him.

No. 49.

Mr. *William Hughes*, Rope-maker,

Holyhead 5th March, 1836.

States that he has supplied the Post-office dock-yard with white yarn, twine, and tow for a period of about seven or eight months. That he was generally paid by Mr. Roberts, the late storekeeper, who told him that he must allow five per cent. upon the white yarn, as it was always allowed upon what they got from Liverpool. That when he was paid by Mr. Roberts, he always allowed five per cent to him, but never made that deduction from his bill of parcels. Does not know if any body else ever made the deduction afterwards, as the money was always paid by Mr. Roberts at his (Mr. Roberts') public house in Holyhead.

That in the cases where he allowed five per cent. he always charged 44s. per cwt. for white yarn, but on the last occasion, in January last, when he was paid for what he had lately supplied, Mr. Goddard paid him at the rate of 42s. per cwt., that being the charge he made, being told by Mr. Roberts, the clerk, that he was to charge a cash price, as no discount would be required.

No. 50.

Hugh Rowlands, and Hugh Hughes,

State that upon almost every occasion of the delivery of coals from the vessels discharging coals for the use of the Post-office dock-yard, they have had occasion to complain to the meters and the fillers on board that the measure given was very short. That on some occasions the coals delivered from the vessels into the waggons were at the rate of ten tubs to the waggon, although the waggon would not hold, fairly measured, more than eight tubs. That on mentioning to the meters and fillers that they were delivering short measure, they were desired to mind their own business, and not trouble their head about other people: they were frequently told this. They have also told Mr. Roberts, the late storekeeper, frequently, that the coals were delivered very short of measure, and he always replied that he would see into it. That Mr. Roberts, the late storekeeper, has himself stopped a barrow upon one occasion, and measured it with the tub in the yard, and found it not more than three-fourths full. That after having discovered this deficiency, Hugh Rowlands has told Mr. Roberts that the measure was still delivered short; and that no steps were taken to prevent the improper practice, although it has very frequently been the case since.

No. 51.

Mr. *Cuthbert Simpson*, Ship Chandler and Oil Merchant, &c.,

Has been in the habit of supplying oil, tallow, cordage, pitch, varnish, and various other articles for the use of the Post-office packets at Holyhead. The oil is charged in the invoices at a certain sum per imperial gallon. No oil has been supplied since the year 1834 by the old measure. Previous to that time, if oil was supplied by the old measure it was always marked on the invoices, which was considered essential. Olive oil has been sold for many years to the Post-office by the imperial gallon.

The gallon contains 9 lbs.
The old gallon 7½ lbs.

Were the oil actually measured there would be a surplusage, as the weight they allow to a gallon exceeds the quantity which it would contain if measured.

Mr. Simpson is quite sure that the oil charged in the invoices of the 29th January, 1835, and 1st April, 1835, must have been supplied by the imperial gallon.

Mr. Simpson always shipped his goods by vessels he was authorized to employ by Mr. Banning, the postmaster.

Statement of
John Price
and
William Parry.
Dec. 4, 1835.

No. 52.

*John Price, Master of the "Endeavour," and William Parry, Master of the "Industry,"
Holyhead, 4th December 1835.*

Are both considerable proprietors of the vessels which they command, which have been always employed in the Holyhead and Liverpool trade. There are only three other vessels in the regular Liverpool trade from this port, viz., the "Echo," the "Gleaner," and the "Lord Edward." These three vessels are of the same class, and about the same tonnage as the "Industry" and the "Endeavour," and belong wholly or partly to Mr. Johnstone, the resident engineer.

Since Mr. Johnstone became a proprietor of the Liverpool traders, his vessels have carried all the packet stores, although Mr. Price and Mr. Parry have used every means to get a part of this trade, as there is comparatively little trade besides between Holyhead and Liverpool.

An offer was made to Mr. Goddard, some time ago, on behalf of the owners of the "Industry" and the "Endeavour," to carry the packets' stores on very much lower terms than they have been hitherto conveyed for, and they are willing to renew that offer; at present they are not allowed to carry any of the Post-office stores, which are always reserved for Mr. Johnstone's vessels, although they are many times ready, and might be brought round by the "Endeavour" or the "Industry" a fortnight sooner than they can be from having to wait for Mr. Johnstone's vessels.

Statement of
Mr. David Griffith,
Dec. 28, 1835.

No. 54.

David Griffith, Foreman of the Shipwrights and Calkers,

Holyhead, 28th December 1835.

States that he was ordered to-day, by Mr. Goddard, to renew the copper on the "Escape's" bottom where it was broken, and to raise the copper all round her six inches. This he did by putting the new copper over the old, without looking at the calking and where he raised the old copper; he put nothing under the new but tar, and did not calk under it.

States that the "Escape" requires calking very much. Griffith was carpenter of the "Escape" about six years ago with Captain Skinner, and says that at that time, which was before her power was increased from 80 to 100 horse, that she strained very much in bad weather, and was considered a very weak vessel. The "Escape," subsequently to Captain Skinner's death, was considerably strengthened at Holyhead.

Griffith would never put copper on any vessel of his own in the manner he did to day to the "Escape," for he would have first taken off the old copper and calked the plank under it; then he would have put felt or paper under the new copper, but he had no order to do so to-day, and, being pressed for time, he patched it up in the way above described.

DAVID GRIFFITH.

No. 55.

Statement of
Hugh Williams,
Dec. 17, 1835.

No. 55.

Hugh Williams, Foreman of the Harbour Works under Mr. Provis,

Holyhead, 17th December 1835.

Has been in the practice of getting occasional supplies of coal, iron, and other things required for the graving dock, gas works, and harbour buoys out of the Post-office stores. Mr. Johnstone, the resident engineer, and Mr. Roberts, the storekeeper, are the only persons to whom Williams applies for anything he may require. Coals have been generally repaid in kind. Smith's coals they repay in money, as the quantity they require is so small that they do not lay in any stock of their own.

Williams keeps a day-book, in which he inserts whatever he receives for the use of the harbour, or gas works. The entries in this day-book marked "G. P. O." show the stores re-

ceived from the Post-office yard. Boiler-plate they have always had from the Post-office yard and smith's coal. Neither Mr. Johnstone nor Mr. Roberts have any coal-yard of their own. Mr. Johnstone has at different times repaired the engine in the graving dock-yard, the boiler, and gate sluices.

Williams goes to the stores for any article he requires himself, and is quite sure that nothing is received, without his knowledge, for the harbour works, graving docks, or gas works.

He has examined two bills paid to Rowland Roberts, the storekeeper,—one dated 30th September 1834, for things supplied for the harbour works, amounting to £3. 4s. 8½d.; the other dated 30th October 1834, on account of the gas works, amounting to 10s. 5½d. Is quite certain that the articles contained in these bills were received from the Post-office stores.

On comparing the bills now with his own day-book, he finds that they correspond with the exception of one item of two gallons of oil, which he recollects to have received for the dredging machine, although he must have omitted at the time to enter it in his day-book.

(Signed) HUGH WILLIAMS.

No. 55.

Statement of
Hugh Williams,
Dec. 17, 1835.

No. 56.

Hugh Williams, Foreman of the Harbour Works,

Holyhead, December, 1835.

Has had his attention particularly directed to an entry in his day-book of 2 cwt. 1 qr. 14 lbs. of flat bars of iron, received for fastening down the lead on the clock-house roof on the 19th December, 1832. Is quite sure that this iron was received from the Post-office stores, and not from Owen Pritchard.

Hugh Williams cannot positively recollect in whose name the bill for this iron may have been made out. Had it been sent in to Mr. Provis or him, in the name of Owen Pritchard, he would have approved of it, and the bill would have been paid, as Williams had only to refer to his day-book to see if the quantity charged corresponded with the entry there.

There were private transactions between Owen Pritchard and Johnstone, and any bill for stores received from the Post-office yard would have been at once paid to Owen Pritchard, if Johnstone, the resident engineer, gave Williams directions to do so.

The bill made out in Owen Pritchard's name, and dated 31st January, 1832, amounting to £1. 17s. 9½d., for bar iron for the platters, buoys, and grates, it appears has been paid to Owen Pritchard, although the iron was not got from him, but from Mr. Johnstone's, or the Post-office stores.

Williams has got all his hoop-iron from Owen Pritchard, but very little other iron.

(Signed) HUGH WILLIAMS.

J. GREY, Commander "Escape."
W. WADLING, Commander of "Cinderella."

No. 57.

Statement of
Captains of
Holyhead Packets.

No. 58.

Holyhead, 23d December 1835.

The mates of the Post-office packets state that their pass-books show a correct account of all the stores drawn for the use of the packets, with the exception of the engineers' stores. They can vouch for their accuracy, as the captain's quarterly return to the agent is made out from their books and strictly compared at the time.

When the packets are undergoing repairs, the materials, with the exception of rope, are not regularly entered in the pass-books. They generally draw all the stores for the use of the vessels, with the exception of the engineers' stores. They never sign any receipt for what they get. When any old stores are restored to the yard, the mates never receive any receipts for them. There are no books of the receipt or expenditure of stores kept on board any of the packets, nor can the mates state what there is on board except from memory.

(Signed) ROBERT WILLIAMS, Mate of the "Dragon."
HARRY PARRY, Mate of the "Escape."
HUGH JONES, his x mark, Second Mate of the "Wizard" (First Mate sick).
OWEN ANTHONY, Mate of "Cinderella."
R. EDWARDS, Mate "Gulnare."
WILLIAM HARRISON, Mate "Harlequin."

Statement of the
Mates relative to
their Pass-books.
Dec. 23, 1835.

No. 59.

Statement of the
Engineers relative
to their Pass-books.
Dec. 20, 1835.

The engineers of the Post-office packets state that their pass-books show the quantity of stores supplied for the use of the engine-room, and that they are quite sure of their correctness, except when the steam vessels are under repair; then there is no account kept in the pass-books of the materials used by the workmen, nor have the engineers any means of ascertaining the amount of them.

When files and shovels are required by the engineers they are supplied by an order from the resident engineer, and therefore the pass-books must be correct with respect to the quantity of these materials. White lead and litharge are the only stores supplied for the use of the engine-rooms that are not mentioned in the pass-books.

When any stores are drawn from the dock-yard for the use of the engines of the Post-office packets, the engineers always go for them, but they never sign any receipt for what they get.

When the engineers return any old stores into the dock-yard, they never receive any receipt for them. It is quite impossible to tell what stores there are on board any of the packets in the engineers' department, without getting them all up and taking a list of them. This has never been done. The engineers send monthly to the captains the quantity of tallow, oil, tow, long hemp, white yarn, and film, which they have received during the month from the yard, but they do not send a return of any other articles. They likewise send an account monthly to the captains of all work done to both engines and boilers, with their state and condition.

JOHN THOMAS, Master of the "Countess of Liverpool."

No. 60.

Holyhead, 16th December, 1835.

No. 61.

Statement of
Captain Duncan.

Captain *Duncan*, Commander of the "Dragon,"*Holyhead Station.*

Is of opinion that the morning packet between Holyhead and Kingstown might, without inconvenience to the public service, be discontinued, by which a considerable saving would be effected. The packet which leaves Kingstown harbour at 7 P. M. very rarely fails in arriving at Holyhead before the despatch of the London mail at 4 A. M. The average passage from Kingstown to Holyhead is 7 hours, certainly not more than $7\frac{1}{2}$, and 9 hours would ensure the packet's arrival at Holyhead with great certainty. Nothing but a heavy gale from the south-east could possibly prevent the arrival of the packets in time, even with their present power, and, of course, with an augmented power and superior class of vessel, there would be still less risk of any irregularity. Passengers would not, by any means, find any inconvenience from crossing in the night, as they would give a decided preference to the evening packet. Not one in ten arriving by the mail wait for the morning packet. The morning packet frequently leaves without any passenger. Such a thing very rarely occurs with the night packet. Captain Duncan does not believe that there would be any diminution of passengers were the morning packet taken off the station. None of the stores supplied for the "Dragon" are under the control of the commander, nor is it expected that he should make any observation as to their quality, although he must necessarily have an opportunity of judging as to whether the articles supplied are of the best description for the service. The commander makes no demand for the articles of ordinary consumption. These are supplied to the engineers, steward, or person applying at the store, for which they account monthly. No receipt is given by any person to the storekeepers for the stores delivered, but an account is made out monthly by the engineer, submitted to the captain, and, upon receiving his signature, returned to the agent.

The oil and tallow is not always of the best quality; that which is at present supplied is very much tainted, and occasions a most disagreeable effluvia on board the vessel. The engineer is not placed under the direction of the commander, nor is the commander allowed to exercise any sort of authority over him. A general order to this effect was communicated

by the agent for the guidance of the commanders on the station. If the engineer chooses even to refuse to go to sea, the captain has no means of compelling him. The agent, of course, exercises an authority over every officer at Holyhead, but were a difference of opinion to arise between the commander and engineer at Kingstown, as to the propriety of putting to sea, there is no one to appeal to.

About five years ago a general order was issued to the commanders not to back the engines on coming into harbour, and to stop the engines before coming in. Had this order been attended to, it would have been quite impossible to keep the steamer coming in from running foul of the vessel ahead of her at the moorings. Captain Duncan never attempted to comply with this order, as the commander was held liable for any damage done to the vessel, and he was well convinced of the impossibility of preventing an injury to the packet he commanded had he adhered to the order. It would have been frequently quite impossible to bring the packets into harbour at all had they obeyed this order. The "Dragon" got enlarged cylinders about six years ago, previous to which Captain Duncan thinks he made quite as good passages as she has ever since.

The present arrangement of having the packets repaired at Holyhead is very objectionable. No duplicates of any part of the machinery are kept, and when they are required, it is necessary to bring them from Liverpool or Soho.

(Signed) JAMES DUNCAN.

No. 62.

Captain *George Evan Davis*, Lieutenant R. N., Commander of the "Gulnare" Post-office Packet,

Holyhead, 18th November 1835.

Has been a commander of a Post-office steam packet 10 years on the Holyhead station; is of opinion that Howth harbour is not available for the present packets for want of water and space, and that the Liverpool packets could not get in or out at low water. The "Gulnare" draws 9 feet 6 inches, but the other Holyhead packets draw about 8 feet 6 inches. Captain Davis is of opinion that the morning packets from Holyhead to Kingstown might be dispensed with, and that four powerful steamers, well fitted up with good accommodation for passengers, would be quite sufficient to perform the duty of the station, and most materially diminish the expenses of it. The only coach arriving at Holyhead in the morning is the Chester mail, which brings very few passengers for the packets, and therefore he is quite confident that no private steam company would take up the morning conveyance thus given up by the Post-office packets, or attempt to compete with them in any way on their own ground.

There are six steam packets at present on the Holyhead station besides the "Royal Sovereign" steamer and "Iris" sailing cutter, lying in ordinary, and for what purpose, he is not aware. The "Iris" has been lying there doing nothing for the last 10 years, to his knowledge. He is not aware of the "Iris" or "Royal Sovereign" ever having been employed in bringing stores from Liverpool for the dock-yard. Captain Davis is of opinion that the situation in which steam packets lie at Holyhead to receive boilers and undergo repairs is highly ineligible, inasmuch as they ground twice a-day, and there is, under certain circumstances, a heavy swell rolling in at that part of the harbour.

The Post-office dock-yard is very inconveniently situated with respect to the graving dock at Holyhead, it being at the opposite side of the harbour,—which occasions a great loss of time in passing over materials and workmen by the boats.

(Signed) GEORGE E. DAVIS.

No. 63.

Captain *George Davis*, Lieut. R.N., Post-office Packet "Gulnare."

Holyhead, 20th November 1835.

The "Gulnare" is 306 tons burden, and has two 50-horse power engines.

The Liverpool packets "Ætna" and "Comet" are 300 tons burden, and have two engines equal to 170-horse power.

Captain Davis is of opinion that the "Gulnare" might have an increase of power by adopting the same plan as has been done with the Liverpool vessels and others,—namely, increasing the cylinders and the weight on the valves. This would neither be attended with much expense, nor alter the draught of water of the "Gulnare," but it would considerably improve her speed in bad weather, and make her the best steam vessel in the Post-office service.

He has been connected with steam navigation, as owner, agent, and commander, during the last fourteen years. He has commanded, at various periods, several of the contract-built Post-office steam packets, and is of opinion that the "Gulnare" and the other vessels built in the King's yards will considerably outlast the contract-built packets.

He is not aware that Mr. Goddard, the postmaster and packet agent at Holyhead, ever commanded a steam vessel. Neither he nor any of his officers ever give a receipt for the stores at the time of their delivery on board the packet, but the commanders send quarterly to the agent a copy of the pass-book in which the stores are entered.

He considers it his duty to pay every attention to the economical expenditure of the stores

on board his vessel, but he does not consider himself responsible for the security and safety of them as he would were he employed in the Royal Navy. He knows of no instance wherein a captain of a packet has been called upon to make good any deficiency. The supply being only of articles in immediate substitution for those worn out, no spare ones are on board, the engineers' department excepted, whose sea stock of tallow, oil, &c., is of small amount.

(Signed) GEORGE E. DAVIS.

Captain Edward Owen, Commander of the "Wizard," has read the above statement of Captain Davis, and perfectly agrees with him. Captain Owen is a lieutenant in the Royal Navy, and has commanded steamers for 13 years.

(Signed) E. OWEN.

No. 64.

Statement of
Captain Davis,
Dec. 3, 1835.

No. 64.

Captain Davis, Commander of the "Gulnare."

Holyhead, 3d December 1835.

The "Gulnare" was fitted out at Chatham, under the superintendence of Captain Davis, in the beginning of last year. The engines were put in at Blackwall, and the upholstery supplied by tradesmen there. All the tradesmen's bills were sent to Captain Davis to be certified by him, but he knew nothing of the charges of the dock-yard for building it. The items in some of these bills appeared to be very extravagant. He of course considered it his duty to remark on each item which he considered overcharged, in order that the Post-office might not pay more than the usual price. The original bills will show more accurately what those items were than he can from his recollection, as he has no copy of the bills. Captain Davis cannot say whether those remarks were attended to, or if any deductions were made in the bills before they were paid.

In consequence of a letter from the Secretary to the Post-office, he procured estimates in Dublin and Holyhead of the prices for which the articles he conceived to be overcharged in the original bills could be supplied. Those estimates proved the accuracy of his opinion, which he would not have ventured to express without some previous knowledge as to the customary prices of such articles. For some years previous to entering the Post-office service, Captain Davis had been connected with private steam companies, as proprietor, commander, and agent.

The bill for pilotage was one which he thought overcharged. The bill for shipwrights, joiners, smith, &c., (Fletcher and Fearnall,) he thought overcharged, the whole of that might have been saved, and two months or more of delay, if the engines had, according to Captain Davis's suggestion, been put in at Chatham dock-yard.

(Signed) GEORGE E. DAVIS.

No. 65.

Statement of
Captain Grey.

No. 65.

Captain Grey, Commander of the "Escape."

The steamers at present employed on the Holyhead station are very well calculated for the conveyance of the mails, and at the same time afford good accommodation for passengers. The Liverpool packets that Captain Grey has had an opportunity of being in company with, viz., the "Thetis" and "Dolphin," are decidedly faster than the "Escape," but would not be so well calculated for this station as the "Escape," inasmuch as the "Escape," being a shorter vessel, is handier for the harbour of Holyhead. A vessel about 300 tons, with engines of 140-horse power, would, in Captain Grey's opinion, be of a class exceedingly well suited for this station; such a vessel would afford ample accommodation for passengers, and convey the mails with greater despatch than at present.

The "Escape," which Captain Grey commands, was built at Harwich, and has been on this station since 1826. Believes her to be built of good materials, and considers the work in that ship as good as he ever saw. She has a great deal of fir plank, which is objectionable in point of strength, although it has the advantage of being lighter than the other. The stores required for the engine room are supplied without any demand from the commander, and are in no way under his control.

The commander signs a monthly return of the stores consumed in the engineer's department. The commander takes it for granted that the stores comprised in the engineer's return have been received on board and properly applied by him.

Captain Grey considers the engineer entirely under his control when the vessel is at sea, and bound to obey his orders, even supposing the engineer to have a different opinion from the commander in cases where a repair to the machinery or boilers may be necessary.

There is no female steward on board the Holyhead packets. Captain Grey does not think there should be a female attendant. The stewards receive no salary, and are entirely dependent on passengers. They very frequently receive nothing from passengers. Does not think they ought to have a salary unless the fees were abolished.

(Signed) J. GREY.

No. 66.

Captain Grey, of the "Escape."

Holyhead, 7th December 1835.

Has been 36 years in the Post-office employment, and has commanded a steam vessel since April, 1824. Has commanded, at different periods, the "Harlequin," "Cinderella," "Aladdin," "Sovereign," "Ivanhoe," "Vixen," "Meteor," "Wizard," and "Escape." When in command of the "Vixen," he was obliged to leave her and give her up to the senior officer, she being the best vessel then on the Milford station. Captain Grey states that from the superior construction of the "Vixen," she having been built in a King's yard, he would prefer her to any other of her class, and that were he to purchase a steam vessel for his own use, he would sooner buy one built in a King's yard, than one of the same dimensions, power, and speed, built in a private yard.

Since the "Gulnare" has been on the Holyhead station, Captain Grey has never observed how she was constructed; has been passenger on board of her, but cannot give any opinion of her strength.

The "Escape" is 237 tons burden; she is the vessel that Captain Skinner and his mate were washed overboard from by the bulwarks giving way. They both perished. Captain Grey was not aware that the stanchions on the "Escape's" quarter-deck were only morticed into the shear plank. He knows that Captain Skinner, previous to his death, had represented that the bulwarks of his vessel were too weak, that the cabin deck was not fastened at all, and that there was no shelf-piece for the beams to rest upon, and he believes that to have been the fact.

He has read the evidence of Captain Skinner before Mr. Jephson's Committee of the House of Commons relative to the "Escape" and "Vixen," from question 449 to 466, and, with the following exception, believes them to be quite correct, namely,—

Captain Grey thinks there is more oak in the "Escape" than what is represented by Captain Skinner, although he has never himself inspected her, but he says so from his carpenter's report, and he thinks that the expression of "a dozen of them" requires to be qualified.

(Signed) J. GREY.

Hugh Hughes, Carpenter of the "Escape."

Holyhead, 7th December 1835.

He is quite sure that Captain Skinner's report of the "Escape," and of the quantity of fir and oak in her is correct. He states that her upper work is very weak, and that when a sea strikes her, she shakes like a basket. He was nearly seven years carpenter of the "Aladdin;" does not consider her upper works well fastened. He reported to Captain Grey the quantity of oak that was in the vessel, which accords with Captain Skinner's statement.

HUGH HUGHES, his \times mark.

Witness, NORRIS M. GODDARD,

Witness, J. GREY.

No. 67.

Captain Moon, Commander of the "Harlequin,"

Has been 16 years in the packet service, but did not get the command of a steamer until 1833, having been appointed to the first vacancy, which occurred after the breaking up of the Harwich station. The commanders make no demand for stores supplied for the engine-room, nor have they any control over them. These stores are furnished from the dock-yard, and the only thing they require of the commanders is to sign a monthly return, which is made out at the store. The commander has no means of ascertaining whether this account is correct, as it is not presented to him for his signature until after the articles have been consumed.

The stewards on board the Holyhead packets receive no pay or allowance from the Post-office, which Captain Moon thinks most objectionable, inasmuch as passengers object exceedingly to give the usual fee of 2s. 6d. to the steward, and 1s. to the under-steward. The stewards are not allowed to demand this fee; in fact there is an order to the contrary, and the steward of the "Aladdin" was some time ago dismissed for making a charge in writing, he having done so at the express wish of a passenger. The stewards are liable to some disbursements. They are obliged to wash the linen, and keep up the stock of crockery on board. The emoluments which they derive from anything consumed by passengers are very trifling.

Captain Moon considers the present Post-office packets by no means of the best description for this station. He would recommend vessels of the same class and power as those on the Liverpool station, which might be built with flat bottoms, so as not to have a greater draught of water than the present packets. They would, by this means, be enabled to save not less than an hour, on an average, in the passage between Holyhead and Kingstown, and have much better accommodation for passengers. Captain Moon is not aware of any orders which were issued for the guidance of the commanders previous to his removal to this station in

No. 66.

Statement of
Captain Grey,
and
Hugh Hughes,
Dec. 7, 1835.

No. 67.

Statement of
Captain Moon.

No. 67.
Statement of
Captain Moon.

1833. He received no copy of any instructions from the agent on coming here. Never attempted to bring his vessel into the harbour without backing the engines, and considers that it could not be done without danger. The "Harlequin" had new boilers put in in April last. She had originally two engines of 40-horse power each. The cylinders were subsequently enlarged, so as to make her engines equal to 100-horse power.

The orders that have been issued by the agent during the time Captain Moon has been on the station have been shown to him, but he got no copy of them, nor had he an opportunity of taking a copy himself. Were Captain Moon to receive an order not to back his engines on coming into harbour, he would consider it too ridiculous to comply with. In fact, it would be impossible to obey such an order without endangering the safety of the vessel.

At Kingstown harbour there are five moorings set apart exclusively for the Post-office packets. Vessels of war only may take up these moorings. It has always been the practice of the Post-office packets to take up any other moorings, if they found them more convenient. Within the last few weeks an order has been issued by the agent to make a note in the log-book, in case of a packet taking up any other moorings than the five set apart for them. Captain Moon is not aware of any regulations having been issued by the harbour-master at Kingstown. He has only once received any assistance from the harbour-master's boat.

At Howth, the harbour-master's boat was in constant attendance, and rendered great assistance to the packets. The same thing is done by the harbour-master at Holyhead. Captain Moon considers it to be the duty of the harbour-master to render assistance in mooring the vessel. This the harbour-master never will do at Kingstown, although it would be, at times, of great consequence, and enable the mail to be forwarded, under certain circumstances, half an hour before it can now be done for want of this assistance.

Captain Moon recollects starting from Holyhead with the London mail on board the "Harlequin," about 12 o'clock on March last. Captain Jarvis started minutes later, with the Chester mail of that day, on board the "Gulnare." The "Gulnare" arrived in Kingstown harbour about 35 minutes before the "Harlequin," and had just sufficient time to take up her moorings when the "Harlequin" arrived; and, consequently, the packet wherry was obliged, before going ashore with the Chester mail, to go to the assistance of the "Harlequin." Had the harbour-master's boat been there to assist in mooring the vessels, the packet wherry could have taken the mail ashore without any delay. If Captain Moon had arrived first, he would have done exactly as Captain Davis did, and the mail would have been delayed in the same manner. The weather was such on their arrival at Kingstown that it would not have been safe to send the mail ashore in the "Gulnare's" small boat. It would have taken at least an hour to have launched the cutter.

No. 68.
Statement of
Captain Owen.

No. 68.

Lieutenant Owen, R. N., Commander of the "Wizard,"

Holyhead, 11th December 1835.

Entered the Post-office service in 1831, but had been for upwards of eight years previous to that time in command of merchant steamers. Does not consider himself in any way responsible for the stores consumed on board his packet at Holyhead. Has had considerable experience, which enables him to judge of the quality of articles of ordinary consumption in steamers, having for some time been in the habit, when in command of a steamer on the Liverpool station, of reporting any article sent on board which he considered of inferior quality.

The only tallow fit for use in a steamer is the hard Russia tallow, which is quite free from grit. Had his attention directed yesterday to the tallow in use on board the "Wizard," which he considers bad, and such as the engineer could not use without injuring the engines, unless he had previously melted it to get rid of the grit. Does not think that the tallow they have is Russia tallow, it being quite yellow.

Captain Owen is of opinion that the best class of packets for this station would be a vessel of about 300 tons burthen, with not less than 120-horse power. The harbour at Holyhead would admit of a steamer of this capacity, as it would not be necessary to give much additional draught of water. With such packets an hour would, in all probability, be saved in the passage, and the additional comfort to passengers would be very great. At present the accommodation, especially for ladies, is very inferior. Very little attention has been paid to their comfort, and the Holyhead packets do not even carry a female steward, which every merchant vessel taking cabin passengers does. There can be no doubt that the number of passengers by Holyhead would greatly increase, were the same pains taken to make them comfortable here that is done by private companies on other stations who have an interest at stake. Captain Owen has frequently heard passengers say that they now greatly prefer the Liverpool packets on account of their superior accommodation.

No. 69.
Statement of
Captain Wadling,
Dec. 11, 1835.

No. 69.

Captain Wadling, Commander of the "Cinderella,"

Holyhead, 11th December 1835.

Has been on the Holyhead station since the 5th of November, 1832. Had not commanded

a steamer before that time. Does not know much about the quality of engineers' stores. Looked at the tallow yesterday; it appeared to be of the same sort as they always get on board. It does not look at all like Russia tallow; which is decidedly better. Had he got such stuff on board of a vessel belonging to himself he would have sent it on shore. He has often remarked to the engineer what an offensive smell his tallow and oil produced in the vessel, and was informed by him that he could get no better, there being no other in store.

Captain Wadling concurs in the opinions expressed by Captain Owen in his statement, but would prefer a vessel of still larger dimensions and power than that which Captain Owen describes, viz., one of about 350 tons, with engines of 180-horse power. In good weather they would, with such a vessel, make the passage in an hour and a half less than they now do; and in the winter time, with boisterous weather, would frequently save four or five hours. There is not a doubt that if vessels of this class were put upon the Holyhead station, passengers would greatly prefer this route to any other, particularly in the winter time. There ought, most decidedly, to be a female steward.

In case of any complaint being made by the captain or any of the crew of a Post-office packet, it has been the practice ever since Captain Wadling came on the Holyhead station, for the agent to come on board the packet and investigate the case before the commander, mate, and all the parties concerned. Captain Wadling had occasion to report Johnstone, his present engineer, for drunkenness; when the agent took the first opportunity of coming on board the "Cinderella," severely reprimanded Johnstone, and threatened to dismiss him if ever he was again reported for drunkenness.

In case Captain Wadling had to purchase a vessel for himself, he would greatly prefer, if he could, having her from the Government dock-yard, even if he was obliged to pay considerably more for her.

(Signed) W. WADLING.

No. 69

Statement of
Capt. Wadling,
Dec. 11, 1835.

No. 70.

Holyhead, 10th January 1836.

We, the undersigned, commanders of the Post-office packets on the Holyhead station, declare, that the ordinary means of extinguishing fire on board steam-vessels, by having a branch pipe and hose from the forcing feed-pump in the engine-room, is not adopted in any of the vessels we command, notwithstanding the following packets having been on fire, as stated below, viz. :—

The "Dragon" three times, and once nearly destroyed.

The "Harlequin" would have been destroyed had the fire not been extinguished by the crew of a yacht at Kingstown.

The "Wizard" once.

The coal by being placed against the boiler, occasioned most of those melancholy accidents, as proper precaution was not used in leaving a passage, however small, between the coal-boxes and the smoke joints of the boilers.

There is not, at present, any code of signals on board of the Post-office steam-packets under our command. When we had vessels of our own, maintained at our expense, we always kept them supplied with signals of every description we could obtain; and, for our advantage, we spared no expense in their equipment, to render them safe and efficient.

We also beg leave to observe, that there is no regulation that we are aware of respecting the seniority of the commanders in the service of the Post-office; and that we think the system adopted of sending a commander from one station where he might have been the senior officer, to another where he must act as junior, (although his length of service might exceed that of all the commanders on that station put together,) is very unsatisfactory.

(Signed)

W. WADLING, Commander of the "Cinderella."

JAS. P. MOON, Commander of the "Harlequin."

J. GREY, Commander of His Majesty's packet "Escape."

JAS. DUNCAN, Commander of the "Dragon."

The "Gulnare" steam-packet, commanded by Captain Davis, (Lieutenant R. N.,) which vessel was built by the Admiralty, and fitted out in the river, has a branch pipe fitted to the force-pump in the engine-room, but has not been supplied with a hose at Holyhead. The "Gulnare's" coal-boxes are fitted with an open space between them and the boilers. The "Gulnare" has never been on fire. The "Gulnare" has not been supplied with signals, although Captain Davis asked the agent (Mr. Goddard) for a code.

(Signed)

GEO. E. DAVIS, Commander of the "Gulnare."

No. 71.

John Johnstone, Resident Engineer.

Holyhead, 17th Nov. 1835.

Has been on the Holyhead station since 1821, having in that year entered the service of the Post-office as engineer of the "Sovereign." On the increase of the steamers on this station from two to four vessels, Mr. Johnstone remained on shore, and became resident engineer. The permanent establishment, under the control of Mr. Johnstone, consists of—

7 Engine-fitters.
14 Boiler-makers.

No. 71.

Statement of
Mr. Johnstone,
Nov. 17, 1835.

S

No. 71.

Statement of
Mr. Johnstone,
Nov. 17, 1835.

5 Smiths.
8 Labourers to assist the boiler-makers.
2 Labourers for fitting-shop.
3 Apprentices.
7 Smiths' labourers.
2 Nailers.

The number of persons occasionally employed in the engineer's department varies from six to thirty. The masons at present employed in the dock-yard, constructing a foundation for a mill, are under Mr. Johnstone's superintendence. When Mr. Johnstone first became resident engineer there were only two persons employed besides himself in repairing the engines of the packets.

The whole of the iron in the dock-yard in the hands of the workmen is under the charge of the resident engineer. The brass-work is also entirely intrusted to him, as well as the scrap or old iron.

All demands for materials required in the engineer's department are made by the engineer, and supplied from Liverpool, the demands being forwarded to the iron-masters by the agent. The old iron is sold at Liverpool to the persons who supply the new iron, who allow the full value in exchange: it is sent round in small coasting vessels, having been previously weighed by the resident engineer, who gives an account of the quantity put on board to the agent. The resident engineer sets apart for sale whatever he conceives unfit for the service. When anything for the engineer's department is required very expeditiously from Liverpool it is carried over to Kingstown by the Liverpool packet, and brought here the same day by the Holyhead packet. There is no expense in conveying stores in this manner by the Post-office packets. All the packets coming to be repaired at Holyhead must lay aground alongside the pier, which is dry at low-water, and be subject to striking the ground each tide in blowing weather, when a heavy swell sets into the harbour. If the packets were placed in the dry-dock, which is on the opposite side from the workshops, there would be great inconvenience and loss of time in conveying the materials and workmen across the harbour. All repairs required for the machinery and boilers of the Post-office packets on all the stations, with the exception of Dovor, are executed here under the direction of Mr. Johnstone. Mr. Johnstone served his time as a millwright and fitting engineer to Messrs. David Napier and Carter of Glasgow. All improvements and alterations in the engines and boilers of the Post-office packets are done at Mr. Johnstone's suggestion, with the approval of the Postmaster-General. Mr. Goddard, the postmaster and agent at Holyhead, never commanded a steam-vessel. There is no watchman at the dock-yard gate during the night, and there are only three persons who keep a key of the outer gate, namely, the agent, the storekeeper, and the resident engineer. All iron, brass, and copper for repairs of the steam-packets is taken out of the dock-yard by a pass to the gatekeeper, from Mr. Johnstone.

Since larger cylinders were placed in the Holyhead, Liverpool, and Portpatrick steamers, increasing their power, Mr. Johnstone has not heard of any accident occurring to the framing of the engines, except in the "Aladdin," where both cross heads were broken, but they were made of cast-iron. Although the Liverpool vessels have been increased from 140 to 175-horse power, the Holyhead packets from 80 to 100-horse power, and the Portpatrick vessels from 40 to 50-horse power, the boilers of the different vessels have not been increased in size, but, on the contrary, when new ones were required, they were made, if anything, smaller than the old ones: but in order to produce steam, to meet the increased consumption, the valves of the boilers were loaded from $3\frac{1}{2}$ lbs. to $6\frac{1}{2}$ lbs. pressure on the square inch of the boiler. By this means steam of a more highly elastic nature was generated, and by altering the slide valves a smaller quantity of it was made use of. By this operation, connected with heightening the flues, the boilers were made to produce abundance of steam, and of a highly elastic nature. Mr. Johnstone has heard of no accident occurring since these alterations of loading the valves took place, which were effected in the Holyhead packets in 1830.

Experiments have been made to ascertain whether any increase in the expenditure of coal was occasioned by thus altering the cylinders, and creating a more highly elastic steam. The result was, that about one bushel and a half an hour (or 100 lbs. of coal,) more than formerly, was consumed by the Holyhead packets, with improved cylinders; but their speed was improved, particularly in bad weather.

No. 72

Statement of
Mr. Johnstone,
Dec. 5, 1835.

No. 72.

Mr. Johnstone, Resident Engineer.

Holyhead, 5th December 1835.

Mr. Johnstone is never consulted with reference to the general orders which may be issued for the guidance of the commanders in matters connected with the engines. He is applied to only when repairs may be required. The commanders always back their engines on coming into harbour, and it would be, in many cases, impossible to come in without doing so. Never saw a packet come in without backing, unless the engine was disabled; in which case they would let go their anchor.

Mr. Johnstone inspects the engines on board all the packets very frequently, and reports to the agent if anything is amiss. In case of an engineer being drunk while on duty, Mr. Johnstone has no doubt the agent would discharge him; and Mr. Johnstone thinks he ought to be discharged. Mr. Johnstone is in the habit of occasionally taking out part of the stores under his charge, for his own use. He does not receive any written authority from the agent for

doing so, but mentions to him that he means to take such a quantity of iron, and receives the sanction of the agent. Whatever iron Mr. Johnstone takes out for his own use is weighed by the yeoman of the stores: a pass is then given for it, signed by the storekeeper.

Mr. Johnstone orders whatever brass castings or cast-iron may be required when patterns are sent; not otherwise. Mentions to the agent his intention of ordering these articles; receives his assent, but no written authority for doing so. The bills sent with these articles are signed by Mr. Johnstone before they are paid. Is not aware whether any discount is allowed on these bills. It is not the practice to receive discount upon machinery of any description. All the iron is brought from Liverpool in vessels, of which Mr. Johnstone is a principal owner. Is not aware whether the iron could be brought round cheaper in other vessels. His vessels bring all the other stores as well as the iron. They are employed because they are better found, more seaworthy, and faster sailers than any other vessels in the trade. When any castings are required for the store, which it is necessary to have expeditiously, they are brought in the Post-office steamers from Liverpool to Kingstown, and thence to Holyhead.

Mr. Johnstone has never been referred to to give an opinion with respect to the power of engines best calculated for this station: considers the "Gulnare" very deficient in power; she has now two engines of 50-horse power each. Mr. Johnstone would have recommended not less than two engines of 65-horse power each, had he been consulted when the vessel was built. This would have made her faster under all circumstances; in bad weather it would have made a difference of a mile and a half an hour. Mr. Johnstone does not inspect the stores supplied from Liverpool for the use of the engines. Has only on one occasion been applied to for his opinion: this was as to the quality of some tallow which he reported unfit for use. There was about cwt. of it. It was excessively bad, with a most disagreeable smell, and totally unfit for use.

Since the "Gulnare" has come upon this station, the "Royal Sovereign" has had no Post-office duty; she went round for six weeks to Milford this summer, while one of the Milford packets was under repair. The other three Milford packets were at that time, Mr. Johnstone believes, in very good condition, and must have been equal to the duty in the summer, as three packets have very frequently performed the duty there in the winter season. The "Royal Sovereign" has been offered for sale in London: she is worth about £2,000. The "Iris" cutter, now lying in Holyhead Harbour, may be worth about £250; not more than that sum. She might be employed in the Irish trade, but is not fit for anything else.

Mr. Johnstone never received more than £4 or £5 for anything supplied to vessels, or for any repairs executed by him. Has occasionally employed the smiths in the dock-yard, on his own account, at after hours. Brought his own iron from Liverpool, and was allowed to work it up in the stores: had the authority of the Postmaster-General for so doing. A bill was paid to Mr. Johnstone by the owners of the "Wakefield," for stores supplied from the dock-yard. The total amount of this bill ought to appear in the storekeeper's books. He never keeps any books or accounts, and recollects nothing about the amount of bills that may have been paid him.

When the "Cintra" was fitting out, made hod-caps and two davids for her out of his own iron in the dock-yard. Nothing was paid to the storekeeper upon this; about £15 or £16 was paid to Mr. Johnstone.

(Signed) JOHN JOHNSTONE.

No. 73.

John Wood, Engineer of the "Gulnare."

Holyhead, 9th December 1835.

Has been 12 years in the service of the Post-office as an engineer, and had been previously an engineer in the merchant service, and regularly brought up to the business. The tallow now in use on board the "Gulnare" is fully as good as any they ever had. They have been supplied with a great deal worse, and Wood has frequently represented to Captain Davis, that both the oil and tallow were of the worst quality, and quite unfit for the engines. His representations have had no effect. The tallow at present on board is quite different, both in colour and quality, from the best Russia tallow.

When Wood was in the merchant service they were always supplied with the best Russia tallow for their engines, and he has never seen, either for land or marine engines belonging to private individuals, any other than the best tallow used. There can be no doubt that it is the most economical plan to use both the best tallow and the best oil for engines, although it has never been the custom to give either good tallow or good oil from the Post-office stores. When the "Gulnare" was fitting out at Chatham they got some tallow from the Government dock-yard there; it was thoroughly good Russia tallow, and one pound of it well worth two pounds of the tallow they get at Holyhead. If Wood had an engine of his own he would not use the tallow he is obliged to make use of now. The smell from the engine-room, produced by the oil and tallow, is exceedingly offensive. There would be no disagreeable effluvia from either good oil or good tallow. Does not know what may be the contents of the measure used at the Post-office dock-yard. When a gallon of oil is given to him, or two gallons, it is served out in the gallon measure.

(Signed) JOHN WOOD.

No. 73.

Statement of
John Wood,
Dec. 9, 1835.

No. 73.

Statement of
Thomas Ward.*Thomas Ward, Engineer of the "Harlequin."*

Agrees with John Wood, with respect to the quality of the oil and tallow used on board the packets, but thinks the oil he has got now is pretty good: at times it has been exceedingly bad.

(Signed) THOMAS WARD.

Statement of
James Harvey.*James Harvey, Engineer of the "Escape."*

Agrees with Wood and Ward, with respect to the oil and tallow. Captain Grey has often remarked to Harvey on the disagreeable smell of his engine-room. Harvey replied, there was no use in his complaining, as he could not get better.

(Signed) JAMES HARVEY.

No. 74.

Statement of
John Wood.

No. 74.

John Wood, Engineer of the "Gulnare."

There has been no alteration made in the machinery or paddle-wheels of the "Gulnare" since she came upon the station, but a slight addition of weight has been put upon the safety-valves to increase the pressure of steam to three pounds and three pounds and a quarter on the square inch. He is not aware of the pressure in the other packets, but he knows that Bolton and Watt never put more pressure on the valves than two pounds and three-quarters on the square inch. Would consider a pressure of seven or eight pounds on the square inch very high for low-pressure boilers. The diameter of the wheels of the "Gulnare" is 15 feet; the length of stroke, $3\frac{1}{2}$ inches; diameter of cylinder, $39\frac{1}{4}$ inches; diameter of air-pump, 21 inches.

(Signed) JOHN WOOD.

No. 75.

Statement of
William Blundell,
Dec. 7, 1835.

No. 75.

*William Blundell, Engineer of the "Dragon."**Holyhead, 7th December 1835.*

The "Dragon" is very weak in the upper-works; shakes a great deal when the engine is in motion, thereby tending to the derangement of the machinery and pipes. Has read Harvey's statement, and quite agrees with him in what he says about the inferiority of the engineer's stores. The tallow they use for the engines is not Russia tallow, but very offensive in smell; of a yellowish colour and soft consistency. The oil is very inferior to any that he ever saw used on the Dovor station, where he was fireman for ten months. The oil is measured at the store. He was aware, ever since he first came here, that the quantity measured out to them as a gallon was considerably less: mentioned this frequently to the yeoman of the stores, but the thing was never attended to, until just previous to the arrival of Captain Evans and Mr. Gardiner at Holyhead. The way that he discovered that he received small measure, was by taking a three-gallon jar to the store, which he found, after he had three gallons put into it by the store measurer, was not nearly full, but would have held at least a gallon more. Signed a receipt for the quantity the yeoman asserted he had received; although he knew the quantity was incorrect, was unwilling to make any representation on the subject to any person but the yeoman.

(Signed) W. BLUNDELL.

I have heard Blundell, who is engineer on board my packet, make the above statement, and have not the least doubt it is correct.

JAMES DUNCAN.

No. 76.

Statement of
Richard Martin,
Dec. 10, 1835.

No. 76.

*Richard Martin, Engineer of the "Wizard."**Holyhead, 10th December 1835.*

Has not been brought up as an engineer. Was formerly a seaman in the packet service. Does not know much about the quality of oil and tallow. The tallow he saw used in London for engines, when there with the "Wizard," was white, hard, and much superior to what they get at Holyhead, which he has been always obliged to melt, in order to get rid of the grit, and to prevent it from ruining the engine. The oil he has now on board the "Wizard" is exceedingly offensive in smell, but it is by no means so bad as he has had sometimes. He never made any representation of the bad quality of it, because he did not believe he would have got any better. The oil he receives is always served out in a gallon measure, not in a half gallon measure. He goes for it himself. The weight on the valves of the "Wizard" boiler is equal to $6\frac{1}{2}$ lbs. upon the square inch.

(Signed) RICHARD MARTIN, Engineer.

No. 77.

James Harvey, Engineer of the "Escape."

Holyhead, 7th December 1835.

The tallow generally used is yellow and soft; it is not very bad tallow, and that is all he can say for it. Has seen it gritty, and been obliged to melt it consequently. The oil is very good; it is not the best oil, but the only oil they have ever used here. Has not complained of the tallow from a fear of exciting the ill-will of the authorities. If Harvey had seen any disposition to give redress, he would at once have reported that he was receiving stores of inferior quality on board.

JAMES HARVEY.

Statement of James Harvey, Dec. 7, 1835.

No. 78.

George Greenough, Engineer and Foreman of the Fitting Smiths.

Holyhead, 26th December 1835.

George Greenough has been employed eight years and a half at the Post-office stores at Holyhead. Previous to going there, he was employed at Messrs. Bolton and Watt's establishment at Soho. He served his apprenticeship as a smith and fitter at Aigh Iron Works, near Wigan, Lancashire, under Messrs. Lindsay and Co.

States that he made and fitted up, with the exception of the castings, the two-horse engine employed at the Post-office stores. The castings were brought there by Mr. Johnstone, the resident engineer; but the remaining parts of the engine were made out of the Post-office materials by Greenough and the smiths. Mr. Johnstone never made any part of it, nor has he, to Greenough's knowledge, ever handled a tool to work with during the whole time Greenough has been at Holyhead. Greenough states that if Mr. Johnstone told Mr. Gardiner or Captain Evans that he, Johnstone, made the small engine himself, he told what was not true.

Greenough cannot say whether Mr. Johnstone is a workman or not, as he never saw him do anything, all the work being done by Greenough himself and the men under him in the engineers' department.

(Signed)

GEORGE GREENOUGH.

Statement of George Greenough, Dec. 26, 1835.

No. 79.

Joseph Green, a Fitter of Engines,

Holyhead, 19th December 1835.

Served his time, as an articulated apprentice, to Messrs. Bolton and Watt, at Soho, where he was for about ten years. He understands drawing out plans of all parts of engines and boilers. Has been employed for many years erecting engines at different places on his own account: has erected several for Messrs. Bolton and Watt, and other manufacturers, in different parts of England. Has been employed the last seven years at Holyhead, and never saw the resident engineer, Mr. Johnstone, make any drawing. Has executed all the drawings for Mr. Johnstone at Holyhead. Does not think Mr. Johnstone, the resident engineer, could make a drawing like those in the office. Joseph Green has always been in the habit of calculating the contents of the boiler, and performing all the scientific work for Mr. Johnstone. Does not think Mr. Johnstone capable of conducting any scientific work.

States that if Mr. Johnstone told Captain Evans or Mr. Gardiner that the drawings in the Post-office yard of the engines and boilers of the packets were done by himself and not by Joseph Green, that he, Mr. Johnstone, said what was not true. Joseph Green is of opinion that every Post-office packet should be examined by the resident engineer at the end of her voyage, and see that everything is in perfect order, and that, through the ignorance or carelessness of those on board, defects should not be allowed to increase. This has never been the custom at Holyhead, and Green thinks that where so much depends on the regularity of the packets, such precaution should never be omitted.

(Signed)

JOSEPH GREEN.

No. 86.
 Case drawn by order of Vestry, respecting the practicability of rating the Post-office Stores, in Feb. 1835.

No. 86.
 Copy of a Case drawn by order of Vestry respecting the practicability of rating the Post-office Stores, &c., in February 1835.
 WM. WILLIAMS, Vestry-clerk of Holyhead.

"The General Post-office Store-buildings, Yards, &c., on Salt Island, Holyhead."

"The Post-office paid to the Commissioners of the Holyhead harbour the sum of £50 yearly as a rent for the ground on which His Majesty's store-buildings, &c. are erected, and the same amount is still paid annually to the Commissioners of Woods, &c."

Query 1st. "Are these premises ratable to the poor?"

"It can be proved that the iron work of several of the small smacks belonging to this port is done at the stores, for which a full profit is charged."

"Also several other vessels have been repaired at these works: one or two shall only be mentioned here as a proof that work is done at the Post-office stores other than for the Government, which yields certain profits, viz., the iron work of the 'Cintra' schooner, built at Holyhead in 1833, (a vessel now belonging to Liverpool,) was done in these works."

"The brig 'Wakefield' had also her iron work, &c., done there."

“ There are smiths and other mechanics at Holyhead keeping their own establishments, who are fully capable of executing all such work, and would charge no higher for it than what is charged there, if so high.”

Query 2d. “ Whether, under such circumstances, the Post-office store-buildings and yards are rateable to the support of the poor.

(Signed) WM. OWEN, }
 WM. WILLIAMS, } Churchwardens of Holyhead.
 RICHARD MORRIS, Overseer of the poor of Holyhead.

No. 86.
 Case drawn by order of Vestry, respecting the practicability of rating the Post-office Stores, in Feb. 1835.

The case, as it appears on the other side, was laid before a general vestry of the parishioners of Holyhead on the 20th February, 1835, where the following resolution was passed:—

“ Secondly resolved, by a large majority, that the advice of the Commissioners of Poor Laws be obtained respecting the rating of the Post-office stores, in which mention should be made that a ground-rent is paid, and that *certain profits* are made at the stores.

On account of the objections made by few individuals at the said vestry as to the mentioning of any particulars until we should be called upon, and knowing our case would amount to the same thing, the following was drawn.

The first query same as before.

2d thus:—

“ It can also be proved that work is done at the said stores other than for the Government, which yields certain profits.”

Query, “ Whether,” &c.

[The Poor-Law Commissioner's Answer.]

“ Poor-Law Commissioners' Office, 13th March, 1835.

“ SIR,—In reference to the case stated, and the inquiries contained in your communication of the 5th instant, the Poor-Law Commissioners for England and Wales have to inform you that the Board must decline giving their opinion on the subject, which does not arise on any of the changes recently introduced into the law, and which, as it appears to them, should be left to the usual course of professional exposition.”

“ By order of the Board,

To (Signed) E. CHADWICK, Secretary.”
 Mr. W. Williams, Vestry-clerk, Holyhead.

Then the case was sent to John Tidd Pratt, Esquire, for his opinion “ as to the practicability of rating the stores and other places:” who furnished us with the following answer:—

“ General Post-office stores, &c. Query 1st., I am of opinion that if the store-building, yards, &c., are used solely and exclusively for the use of His Majesty's stores, &c., they are not rateable; though if any part is occupied by an officer beyond what is necessary for his accommodation for the public service, he is rateable in respect of the part so occupied. See Rex and Terrott, 3 East, 506; 1 Botts. Poor-laws, 6th ed., p. 213. Query 2nd., I am of opinion that, under these circumstances, the buildings and yards are rateable to the support of the poor.

(Signed) “ JOHN TIDD PRATT,
 4, Elm Court, Temple.”

“ 23d March, 1835.”

The above opinion was laid before a general vestry held in the vestry-room of Holyhead on the 10th of April 1835, where the following resolution was passed, viz.:—

4th. “ Whereas, it appears that the Post-office stores are rateable to the support of the poor, provided works are done at the said stores other than for the Government, it is resolved, That if such practice shall be carried on there henceforth, that the same be immediately assessed to the support of the poor.

“ Signed for and on behalf of the meeting by

WILLIAM OWEN, Chairman.”

The above being a true copy of what had passed. As witness my hand this 5th December, 1835.

WM. WILLIAMS, Vestry-clerk of Holyhead.

(Copy.)

Richard Rowland, bookkeeper, and Richard Jones Hendre, churchwardens of Holyhead's account for the year ending 19th May 1830.

No. 16.—Mr. Johnston, engineer, bill for the new iron gates, weighing 25cwt.

1qr. 12lbs., at 3½d. per lb., and the large one weighing 1cwt. 3qrs. 27lbs.,

at 3d. per lb. £11. 10s. 3d.

Examined 29th May, 1830.

---	--	--	---

10th August, 1835, at Bodidern petty sessions the said valuation was laid before the magistrates, who recommended that an arbitration be formed to reinspect the premises in question, and to settle the matter in dispute between the parties, when it was agreed by Mr. Spencer and Richard Morris the acting overseer, on the part and behalf of the parish, and by Mr. John Provis, on behalf of himself and the other persons occupying the premises on Salt Island, That the same be decided by William Owen Stanley and Humphrey Herbert Jones, Esqs., and that the decision of those gentlemen shall be binding without going into any further expense.

The said gentlemen inspected the premises in question 11th August, 1835, and delivered their award as follows:—"We adjudge that the rate on Mr. Provis' house, land, and premises be confirmed. That the cottages, being only occupied in part, pay the rate of 1s. 3d. each. That the yard pay 2d., and the stable, &c., 6d., a single rate.

No. 87.

Capt. Davies, as to quality of oil and tallow.
Dec. 9, 1835.

No. 87.

H.M. packet "Galnare," Holyhead, 9th Dec., 1835.

SIR,—In reply to your letter of this day, calling upon me to explain why I have not forwarded to the Postmaster-General certain representations of the badness of quality of the oil and tallow made to me by my engineer, I beg leave, first, to say that the statement of the engineer is not quite correct as to his having *represented* the matter to me, as he, in fact, has only, on such occasions as I have gone into the engine-room to know whence the disgusting smell proceeded, shown me that the tallow and oil were the cause thereof; and did not ever (as it would appear) make a special representation to me on the subject. The fact, however, I was well aware of; and I will candidly inform the Commissioners that I have been afraid to make any complaint on the subject, as most of the representations, or suggestions, I have ever made for the good of the service have been met with contempt, insult, censure, and pecuniary fine; and the warning was not lost on me, of a commander on the station (Captain Stevens, of the "Wizard") having been turned out of his vessel for reporting the defective state of his boilers.

I have the honour to be, Sir,

Your obedient humble Servant,

To J. R. Gardiner, Esq., Secretary, &c.

GEO. E. DAVIES.

No. 88.

Letter from G. H. Freeling, Esq. to N. M. Goddard, Esq.
Dec. 26, 1835.

No. 88.

General Post-office, 26th December, 1835.

SIR,—I am commanded by my Lord the Postmaster-General to inform you that application has been made to the Admiralty for temporary assistance under the present circumstances attaching to the stores at Holyhead, and that his Lordship has obtained the services of Mr. M'Knight, who is represented to be conversant with the details of the management of stores in his Majesty's dock-yards.

Mr. M'Knight has been directed to place himself under your order, and I am therefore to desire that you will give the stores at Holyhead in charge to him. You will instruct him to take stock of all kinds under their respective heads; to follow up the investigation of the cases referred to in your letter of the 17th instant, and into the other matters of the same description to which you have alluded, with which view you will request Captain Evans and Mr. Gardiner to furnish him with any information in their power.

You will understand that the Postmaster-General's object in the employment of Mr. M'Knight is twofold,—first, to ascertain whether the circumstances that have led to the suspension of the resident engineer and storekeeper, and the other grounds of suspicion against them, are to be attributed to fraud or to inaccuracy, however culpable, and in the for-

mer case to endeavour to discover to what extent their malpractices have been carried ; and in this respect his Lordship feels assured that he may rely with confidence upon your best exertions, not only as his principal officer at the station, but with the full degree of assistance to be derived from the moral influence you possess over the population of Holyhead. The other, and not less important, object, is to learn whether the mode of supply, issue, and expenditure of stores is what it ought to be, and under proper regulation and check ; and whether the accounts, and, in fact, the whole system in this respect, cannot be placed upon a better and more satisfactory footing, and similar to that in practice in his Majesty's dock-yards.

I am to add that Mr. Wm. Stewart, the chief engineer of his Majesty's packet " Dolphin," who is represented to be a person of superior ability as a mechanic, and of unimpeached integrity, has been directed to proceed to Holyhead, to take upon himself, *ad interim*, the duties of resident-engineer, in the room of Mr. Johnston.

I am, &c.,
(Signed) G. H. FREELING.

N. Goddard, Esq., Holyhead.

Letter from G. H. Freeling, Esq. to N. M. Goddard, Esq. Dec. 26, 1835.

No. 89.

Agent's Office, Holyhead, 29th December, 1835.

SIR,—Under instructions forwarded to me by command of the Postmaster-General, I am to apprise you that his Lordship has informed me that you have been directed to place yourself under my orders, which you will hereby do accordingly. And I have his Lordship's further instructions to deliver to your charge the stores now lying in the General Post-office Dock-yard at this station, which charge you are hereby required to undertake, and to proceed to take stock of all kinds under their respective heads: to follow up also the investigation of the cases upon which I suspended the resident-engineer and the storekeeper on the 17th instant, and into the other matters of the same description to which I have alluded in my letter of that date to the General Post-office, copy of which I have furnished the Commissioners of Post-office Inquiry now herewith, and to whom I am directed by his Lordship to refer you for such information as those gentlemen may have in their power to give you, or for such other commands as they may deem necessary to issue to you with that view.

I am, Sir, your obedient Servant,
(Signed) NORRIS M. GODDARD.

To Thomas M'Knight, Esq., &c.

No. 89.

N.M.Goddard, Esq. to Mr. M'Knight. Dec. 29, 1835.

No. 90.

Holyhead, 29th December, 1835.

SIR,—With reference to your letter of this date, directing me to place myself under your orders in compliance with instructions which you have received from the Postmaster-General, with further directions to deliver into my charge the stores now lying in the General Post-office Dock-yard at this station ; which charge you direct me to undertake, and to proceed to take stock of all kinds under their respective heads—

As regards the taking charge, and proceeding to take stock afterwards, I have to acquaint you that until I have, together with yourself, the duly authorised person in possession, or some person on your behalf, taken a true and faithful account of the stores so to be turned over into my custody, I cannot feel justified, either with respect to the Crown or myself, in taking upon me any responsibility whatever.

I have also to acquaint you that I have represented to the Commissioners of Post-office Inquiry a necessity for more aid than my individual efforts to effect a just and proper Report, as well as to prevent great delay, and possible loss to the Government, from the exposed situation of many of the stores.

I am, Sir, your humble Servant,
THOS. M'KNIGHT.

To Norris M. Goddard, Esq., Agent to the Post-office.

No. 90.

Mr. M'Knight to N. M. Goddard, Esq. Dec. 29, 1835.

No. 91.

Holyhead, 29th December, 1835.

SIR,—I beg to enclose, for the information of the Commissioners of Post-office Inquiry, a copy of orders which I have this day received from Mr. Norris M. Goddard, the Post-office agent at this port, and have to beg their assistance in furtherance of the necessary survey upon the stores now lying in the General Post-office Dock-yard, which, from their magnitude and straggling disposition (many of them being without the protection of a wall, gate, or lock), will unavoidably occasion considerable delay, and probably loss, without more aid than my individual efforts.

I would, therefore, respectfully beg to suggest the assistance of a competent dock-yard clerk, as well as a qualified engineer, unconnected with this particular department or system.

As such further aid would very materially tend to facilitate a faithful and accurate Report of the great accumulation of stores at this depôt, I trust you will be pleased to acquiesce in

my request, as I do not feel myself justified to take upon me the charge and responsibility of stores until the survey is completed.

I have the honour to be, Sir,
Your very humble Servant,

To James R. Gardiner, Esq.,
Secretary to the Post-office Commission, &c,

THOS. M'KNIGHT.

No. 92.

Mr. M'Knight to J.
R. Gardiner, Esq.
Dec. 30, 1835.

No. 92.

Holyhead, December 30, 1835.

SIR,—In reply to your communication of to-day, I beg leave to acquaint you, that as I consider the stores belonging to the Post-office Department, as at present protected, most unsafe without proper watchmen, it would appear desirable, for the better safeguard of the property, that there should be at least three men employed as police in and about the premises, and that I should consider the persons best qualified for that duty would be those selected from the efficient police forces already accustomed to that duty in some of his Majesty's naval yards, in preference to any person that could be chosen from the locality of this station.

I beg also to suggest, for your wiser judgment and recommendation, the benefit that would arise by establishing a proper weigh-bridge, from which the weight of coals, steam-boilers, and other heavy machinery and stores, might be ascertained as a test of the due expenditure of the original material issued for the manufacture of stores by the engineers and workmen employed here. I have likewise to request the supply of a proper set of measures for taking an account of the oil now in store, as well as for the more accurately issuing such as hereafter may be required, as those now in store are considered unfit for that service.

I have the honour to be, Sir,
Your obedient Servant,

To James R. Gardiner, Esq.,
Secretary to the Post-office Commission, &c.

THOS. M'KNIGHT.

G. H. Freeling, Esq.
to Mr. M'Knight.
Jan. 1, 1836.

No. 93.

General Post-office, 1st January, 1836.

SIR,—Captain Goddard having resigned his appointment of agent for packets at Holyhead, I am commanded by my Lord the Postmaster-General to inform you, that you are to consider yourself entirely under the orders of his Lordship, and that you will report directly to him for instructions in all matters in which it may be necessary so to do.

In consequence of your letter to Captain Goddard, stating the necessity for more aid than your individual efforts to effect a just and proper report, his Lordship has applied to the Admiralty for the services of a competent clerk, to be sent immediately to Holyhead to assist you in the discharge of your duty. His Lordship requested Captain Goddard to appoint any one of the captains he may think proper, or any friend of his own, to give his assistance, and to act on his behalf in taking an account of the stores to be transferred to your care; and it can scarcely escape your attention, that, in common justice to Mr. Roberts, the store-keeper, who is under suspension, he should be present during the taking of stock, that he may be satisfied that justice is done to him, and be at hand to afford any explanations that may be desirable.

I inclose a copy of the letter addressed to Captain Goddard, on the 26th December, on the occasion of your employment, and you will consider and act upon that letter as your general instructions.

I am, Sir, &c.,

Mr. M'Knight, Holyhead:

G. H. FREELING.

No. 94.

Mr. M'Knight to J.
R. Gardiner, Esq.
Jan. 3, 1836.

No. 94.

Holyhead, 3d January, 1836.

SIR,—In answer to your letter of to-day, I beg to acquaint you, that in following up the instructions contained in Mr. Freeling's letter, of the 26th ult., to Mr. Goddard,—(a copy of which has been delivered to me, desiring that I should inquire as to whether "the circumstances which led to the suspension of the resident-engineer and storekeeper, and the other grounds of suspicion against them, are to be attributed to fraud, or to inaccuracies, however culpable, and in the former case to endeavour to discover to what extent the malpractices have been carried,")—I have carefully investigated the cases which you had previously inquired into, and am of opinion that they are to be attributed to fraud, and not to inaccuracy; that as many documents and papers are declared to have been destroyed and removed from the offices of the resident-engineer and storekeeper, after these officers were suspended, and the books which remain not showing that there has been any regular check upon the issues or receipts of stores, I shall probably not be able to trace the frauds beyond what has already been detected: I can only say, generally, that from the unprotected state of the dock-yard, and the want of proper means of satisfactorily ascertaining either the quantity of stores received or issued, or of the labourers employed in the dock-yard, except from general totals, that there has been scope for the commission of frauds to very considerable extent.

With reference to your question—"of my opinion with respect to the system adopted here by the agent in the management of the accounts and general control of the establishment, and whether it might not be placed upon a better and more satisfactory footing, and similar to that in practice in his Majesty's dock-yards,"—I cannot but admit that very great supineness is evident from the over-confidence which appears to have been placed by him in the officers of the establishment under his control, thereby showing that the system has not been carried on with that degree of general minuteness and exactness in its various bearings with which public establishments are usually conducted, and that the whole system might with little trouble be placed upon a more satisfactory footing, and similar to that in practice in his Majesty's dock-yards.

I have the honour to be, Sir,

Your very humble Servant,

To James R. Gardiner, Esq.,
Secretary to the Post-office Commission, &c.

THOS. M'KNIGHT.

No. 94.

Mr. M'Knight to J.
R. Gardner, Esq.
Jan 3, 1836.

No. 95.

Holyhead, 4th January, 1836.

SIR,—Your letter of the 1st instant, addressed to me, and sent open under cover to Mr. Goddard, who had previously resigned his appointment of agent for his Majesty's packets at Holyhead, has been duly forwarded to me by that gentleman on the 3rd instant, in which I am informed of my Lord the Postmaster-General's commands to consider myself entirely under his orders, to report direct to him, and to refer directly to him for instructions in all matters in which it may be necessary to do so.

In consequence of which I beg to forward for his information copies of my letters to the Commissioners for Post-office Inquiry, in reply to directions and communications received from them, wherein will be found the report of my investigations, which by your letter of the 26th ult. to Mr. Goddard, I was desired to follow up; as also the recommendations which I thought advisable to make with respect to an efficient police, and an engineer being sent here, from a desire to be assisted in the discharge of my important trust by persons totally unconnected with the locality of the place, or with any branch of the existing Post-office regulations, thereby to avoid the possibility of getting into error or misrepresentation.

With respect to the common justice due to Mr. Roberts, the storekeeper, who is under suspension, that he should be present during the taking of stock, that he may be satisfied that justice is done to him, and be at hand to afford any explanation that may be desirable,—I beg to observe that it is not customary in the service I have been brought up, for an officer suspended for breach of trust to be present upon any survey of stores over which he might have had any management, more particularly when he was not the officer responsibly in charge, and the *bonâ fide* responsible officer himself at hand to give what explanation might be required; and as I consider that I shall be responsible for a faithful and honourable report of the remains of stores in the establishment, I would rather not be brought in connexion with any person over whom suspicion existed,—especially when, by your letter of the 1st, I am informed that a competent clerk, authorized by the Admiralty, will be sent to assist me in the discharge of my duty.

The copy of your letter to Mr. Goddard, of the 26th December, which I am to consider and act upon as my general instructions, has been duly received, and shall have my best attentions.

I am, Sir, your obedient Servant,

To G. H. Freeling, Esq., General Post-office, London.

THOS. M'KNIGHT.

No. 95.

Mr. M'Knight to G.
H. Freeling, Esq.
Jan. 4, 1836.

No. 96.

Holyhead, 13th January, 1836.

SIR,—I have to acknowledge the receipt of your letter of the 10th instant, wherein you state that you have received the commands of my Lord the Postmaster-General, to acquaint me, that neither my Report nor its enclosures are calculated to afford his Lordship any specific or conclusive information upon the points which formed the object of my mission to Holyhead; and that his Lordship conceives the Report should at least have contained a statement of facts, and of the grounds on which I found the opinion I have expressed, that they are to be attributed to fraud and not to inaccuracy. I therefore now beg to state the nature of the two cases I have investigated under the information I received from the Commissioners of Post-office Inquiry, viz.:

That by the bills of parcels furnished by Mr. Johnston, the late resident-engineer, to J. Provis, Esq., bearing dates 20th July, and 29th October, 1834, I find 1227 pounds of iron sold and paid for in the amount of £8. 0s. 9d., whereas the returns to the General Post-office of spared stores sold between July and October of the same year, shows only 514 pounds given credit for to the amount of £1. 4s. 8½d., making a loss to the Crown in this transaction of £6. 16s. 0½d.; and in one case of Mr. Rowland Roberts the storekeeper's bill for stores, sold also to, and paid for by, J. Provis, Esq., dated the 30th September, 1834, amounting to £3. 4s. 8½d., I find no credit in connexion with that account given to the Post-office in the quarterly return made of spared stores, except for six brooms; and in another bill rendered by Mr. Roberts, to the same parties, also paid for, the particulars of which I noted on the original account taken away by Mr. Gardiner, Secretary to the Post-office Commission, the

No. 96.

Mr. M'Knight to G.
H. Freeling, Esq.
Jan. 13, 1836.

No. 96.

Mr. M^cKnight to G.
H. Freeling, Esq.
Jan. 13, 1836.

amount whereof I do not exactly recollect, there is no credit whatever given to the Post-office in the returns made of stores spared, although it was clearly proved to me that every article so sold by the resident-engineer and storekeeper was delivered out of the Government stores. It appears also by the books, that Mr. Johnston has not only sold more iron than he has accounted for, but that he gives credit to the Post-office at the rate of 4s. 6d. per cwt., and disposes of the same articles to another branch of the Government department immediately adjoining the yard, at the high charge of 14s. 6d. per cwt.!

These statements of facts will, I have no doubt, satisfy his Lordship that I had sufficient ground for the opinion of fraud being detected against the late resident-engineer and storekeeper.

With reference to what you state to be my charge of very great supineness against the agent, I beg leave to observe, that opinion was given by me in compliance with the request of the Commissioners, as stated in my letter, a copy of which I forwarded for the information of my Lord the Postmaster-General. The ground upon which I formed that opinion respecting the agent was from documents laid before me by the Commissioners, and now in their possession, in which it appeared, in Mr. Goddard's own hand-writing, that he allowed the resident engineer to manufacture articles in the yard for his own private emolument, and in permitting him also to convey the Government stores in vessels belonging to himself, he, Mr. Goddard, paying the resident engineer a higher freight than other ship-owners had offered to perform the same service for, in vessels equally well-adapted for the service, as acknowledged by the officers immediately under Mr. Goddard; and it cannot escape your notice, that either of these undeniable facts would be alone sufficient to dismiss, and render incapable of ever after serving his Majesty in any civil capacity, any individual in the Navy who would be guilty of such a transaction.

I am bound most respectfully to submit to his Lordship's adherence to his opinion, that the storekeeper should be present at the taking of stock, though not employed in the operation of that duty, feeling assured that neither the presence of the storekeeper, nor his absence, can affect my making a faithful Report of the remains of stores in the establishment, my representation having been made only from the usage of his Majesty's service, and not with any view of depriving him of "fair play."

My application for a proper set of measures arose from being given to understand that the measures used for issuing the oil out of the stores, only contained three quarts instead of four to the gallon, which I fully ascertained; and as I considered a continuance of such practice would be productive of fraud, I feel justified in the recommendation I then made. It will now, however, be my duty to use such measures as I may find in compliance with your directions; but in that case it will also be my duty to note upon the report of survey any difference that may be discovered in comparison with the legalized measures in use.

His Lordship having been pleased to consider it perfectly unnecessary to obtain any persons as watchmen for this special purpose, according to my humble suggestion, must place upon me a much heavier responsibility; inasmuch as from my total ignorance of the people of this place, there will be great difficulty in my selecting men qualified for such duty, who are not, as I am informed, largely connected in some relationship with the people employed on the premises; and where latitude for speculation has once existed, it would seem dangerous to follow on in the same track.

In replying to the concluding paragraph of your letter, calling on me to detail what the system has been with regard to the management of the stores, I beg to say that it appears to have been very badly conducted, from the circumstance of a quantity of timber and plank of various description being exposed in a public passage leading from the Pier to the Dock-yard gate, without any watchman or person to take charge of them day or night, being in the immediate vicinity of a building-yard, and to the vessels moored close to the Pier affording every facility at high water to persons inclined to plunder.

Neglect of mustering the men on coming in and going out of the yard, or of searching, to avoid the possibility of the loss of public property.

The absence of proper checks in the delivery and expenditure of the stores.

From permission being granted the principal officers and others of the establishment, to purchase stores out of the Dock-yard, and to dispose of them for their private emolument, and many other instances which have more immediately come under the notice of the Commissioners of Inquiry.

That this system has been acted upon is obvious from what I have stated above.

My opinion of its defects is, that it must be attended with serious loss to the Government.

That it differs from the practice in his Majesty's yards, in a total absence of due precaution being taken for the safeguard of public property.

In the want of proper approved demands being made for the supply of stores for such purposes as they might be required.

In neglecting to have proper checks for the receipt, delivery, and expenditure of stores, and in fact from being at variance in every essential point with the regulations adopted in his Majesty's Dock-yards.

It might be made to assimilate to the systems of those establishments, by appointing persons (duly qualified and made responsible) to the charge of the stores, and for the purpose of attending to check the due receipt and expenditure thereof; by selecting a proper police for the protection of the property, and by establishing the mode of accounts adopted in Naval yards. All of which, under a proper code of instructions for the guidance of every class of persons connected with the establishment, I feel assured might be accomplished with the aid of the gentleman appointed to assist me in my duties.

I am, Sir, your obedient Servant,

G. H. Freeling, Esq., &c.

THOS. M^cKNIGHT.

No. 97.

No. 97.

Holyhead, 23rd February, 1836.

Mr. M'Knight to J.
R. Gardiner, Esq.
Feb. 23, 1836.

SIR,—By this night's post I forward my Report of survey upon the remains of stores in the Dock-yard at this place. It has been attended with no little fatigue, bodily and mental, from the great irregularity in the arrangement of them, and general, I may add, imperfect way of keeping the accounts. Indeed, so bad has been the system, that a very considerable part of the stores do not, by the books or documents, show that they are upon charge; and, as I was directed by the Postmaster-General to show the remains contrasted with the accounts, I have been obliged in my remarks to state that, as many of the stores do not appear on charge, it has been impossible for me to make any comparison showing what should remain, and consequently it will appear to you that I have had no means of discovering frauds, although such might have existed. There are many instances in which deficiencies do appear rather in large quantities; and in those cases of the principal articles for manufacture, such as boiler-plate, angle iron, sheet iron, &c., I have been unable to make a comparison, as no books in the storekeeper's office show what ought to remain. The same applies to old iron, of which there is nearly 100 tons without appearing to be on charge; a quantity of old copper in like manner, and so with many other articles.

The oil in store shows a surplus upon the store account of 150 gallons imperial, but upon the quantity expended during the last twelve months, there should have been at least 280 imperial gallons surplus, as the gallon measure used during that period, and for upwards of six years before, have been those which you saw, holding *three* instead of *four* quarts to the imperial gallon.

These remarks I have made pretty fully upon almost every page of the survey, and I trust they will meet with the approbation of the Postmaster-General, as well as the Commissioners, as I have been unwearied in my attention to produce a distinct and full Report.

The coals having been measured by cubic measure, under the directions of Captain Bevis, the agent, and found by that mode to be 200 tons short of what should remain per account, I have been further instructed by the agent to go over the whole quantity, to ascertain more positively the true remains. This duty will occupy about ten or fourteen days more. When gone through, I will inform you of the result. This notice has also been made upon my Report forwarded. When you have seen it, I shall be glad to know if it is what you think proper.

I have the honour to be, Sir, your most obedient Servant,

J. R. Gardiner, Esq.

THOS. M'KNIGHT.

No. 98.

No. 98.

Holyhead, 5th March, 1836.

Mr. M'Knight to J.
H. Freeling, Esq.
Mar. 8, 1836.

SIR,—Having yesterday finally ascertained the remains of common coals belonging to the Post-office packet department at this station, after most carefully measuring the same by bushel measure, I beg to inclose an account thereof for the information of my Lord the Postmaster-General, together with a statement showing a difference from the original Report of survey of about four tons. So trifling a variation between cubic measure and that by bushel measure, on so large a quantity of coals, will, I trust, assure his Lordship of the degree of attention that must have been paid in the performance of that duty.

With reference to your letter of the 17th January last, wherein you state, "His Lordship trusts that in the course of my examination I may be able to ascertain the extent to which the irregularities at Holyhead in respect of the stores have been carried, or whether they are to be taken as confined to the cases specified"—I respectfully beg leave to remark, that the deficiency on the coals so accurately ascertained will show an irregularity in the management of the stores of a most palpable nature.

That with respect to the generality of other stores, besides those I have already remarked upon, I am unable to make any particular statement, from the reasons assigned in my general Report of survey.

In accordance with my sense of the confidence reposed in me on this important duty, I feel it incumbent to state to my Lord the Postmaster-General that, preceding the last survey on the coals, I thought it necessary to find out what quantity of coals the waggons used for conveyance thereof to the packets would contain, to establish a basis for arriving at the positive remains.

On repeated examinations, several of them under the immediate observation of Captain Bevis, the agent, I found they would only contain 16 bushels when filled much more than had been practised for upwards of five years, during which time the coals have been expended on the books and charged to the steam-packets at the rate of 18 bushels per waggon.

On going back to the expense of the last two years, the quantity issued to the steam-vessels has been charged as 16,666 tons, which, by the difference of measure, will show an overcharge to those vessels of about 2000 tons in two years. It will, therefore, be evident to his Lordship that the long continuance of such a system must have been seriously injurious to his Majesty's Government.

In making the foregoing statement, I hope my Lord the Postmaster-General will do me the justice to believe that I have done so from a pure sense of my duty, as a most humble servant of the Crown, and in strict obedience to the instructions with which I have been honoured.

I am, Sir, your obedient Servant,

G. H. Freeling, Esq., &c.

THOS. M'KNIGHT.

No. 99.

Capt. Bevis to G.
H. Freeling, Esq.
Mar. 14, 1836.

No. 99.

Agent's Office, Holyhead, 14th March, 1836.

SIR,—I beg leave to report, for the consideration and approval of my Lord the Postmaster-General, that in consequence of its being the practice here to receive the coals into the yard at thirty-two bushels to the ton, and issue them at twenty-eight, and yet a deficiency appears in the remains; I have, therefore, considered it for the good of the service to issue an order to the respective captains, that, in future, the coals will be received and sent out of the yard at 32 bushels the ton; and as it is a well-known fact that the wastage in this article (especially when it is exposed to the open air) is very great, I have most respectfully to request that a fair allowance may be permitted to appear in the account for the waste, which I consider more beneficial to the service than making a difference in the manner of receipts and issues.

I am, &c.,

No. 100.

General Post-office, 22nd March, 1836.

SIR,—I inclose a copy of a letter from the agent for his Majesty's packets at Holyhead, relative to the receipt and issue of coals for the use of those vessels, and I am directed by my Lord the Postmaster-General to request you will have the goodness to state what, in your opinion, should be the fair allowance to be made for wastage in the account of the issue of those coals from the store.

I am, Sir, your obedient Servant,

THOS. LAWRENCE,
in the Secretary's absence.

Mr. M'Knight, 27, Fore-street, Limehouse.

No. 101.

Mr. M'Knight to
T. Lawrence, Esq.
Mar. 23, 1836.

No. 101.

27, Fore-street, Limehouse, 23rd March, 1836.

SIR,—I have to acknowledge the receipt of your letter of yesterday, and beg to acquaint you, for the information of my Lord the Postmaster-General, that, from my knowledge of the practice in his Majesty's naval yards, I am aware that no allowance for waste on the issue of coals ever appears in their accounts, as they are received by weight and issued out agreeable to the quantity taken on charge; and that I believe the waste, under the method of receiving and issuing them by weight, would be hardly discoverable, and that any possibility of loss could only take place from the effect of wind, which on large coals must be very trifling; the generally-received opinion being that wet would rather increase than diminish the weight; although exposure no doubt deteriorates the strength of the coals.

As issuing coals by measure must at all times be attended with much uncertainty, I most respectfully beg to suggest, for the consideration of my Lord the Postmaster-General, the system adopted in the naval yards, which turns out so accurately, and which I most humbly submitted when I first went to Holyhead.

Should it be his Lordship's pleasure to continue the system at present used at Holyhead, for the receipt and issue of coals, I would venture to recommend that a stated quantity of coals, say 100 tons, should be carefully received into the stores, and subsequently issued out under the strictest care and attention, the account whereof being scrupulously kept would be the best test for finding any loss or difference that might result; although I am persuaded that, with judicious management, even by bushel measure, the quantity issued would turn out to the full extent of what was received.

I am, &c.,

mas Lawrence, Esq.
Apr. 1, 1836.

No. 103.

Agent's Office, Holyhead, 1st April, 1836.

SIR,—In returning the inclosed documents on the receipt, issue, and wastage of coals, I beg leave most respectfully to state, for the information of my Lord the Postmaster-General, that however correct Mr. M'Knight may be in his system, I am still of an opinion that the waste

in coals is very great, especially when exposed to constant wet, as is the case here, and it will no doubt be in his recollection that during the process of measuring them the yard was one mass of black mud, caused by the wet washing the small coals down through the heap; and I believe that if reference is made to any of the dock-yards, it will be ascertained that the issues upon any stated quantity have fallen short. I am, however, ready, if it is the pleasure of my Lord, to measure carefully the next cargo, put it in a heap by itself, and then issue it in the same way, for my future guidance as to wastage and general expense.

Thomas Lawrence, Esq.

I am, &c.,

THOMAS BEVIS.

No. 103.

Capt. Bevis to Thomas Lawrence, Esq.
Apr. 1, 1836.

No. 104.

27, Fore-street, Limehouse, 8th April, 1836.

SIR,—On the receipt of your note of the 6th, I immediately made the necessary inquiry of the practice adopted in the receipt and issues of coals among the coal-merchants of London. The inclosed statement from a very respectable and considerable coal-merchant, who is in the habit of landing cargoes of coals in his yard, from whence they are sold out to small dealers and others, will corroborate the evidence given by me before the Commissioners of the Post-office Inquiry, which evidence was given after having ascertained that in all accounts rendered to the Admiralty from various public departments, where large quantities of coals are expended, no allowance for waste is ever made. In addition to these statements, the store-keeper at Woolwich dock-yard, having most positively assured me that no waste on the coals issued from that establishment to the packets, &c., has ever occurred, or would ever be allowed, will satisfy you that my evidence has been grounded upon authority most unquestionable.

With respect to the statement made by Captain Bevis, that great waste must occur in the coals from the wet washing the small through the large coals,—I beg to acquaint you that I have been able to learn from various dealers, that coals being exposed to wet will increase in weight; and that, very generally, where coals are taken from a large mass or heap, the large coals fall, and breaking into pieces, will invariably measure more out than when delivered into the yard, provided that due care is taken, in the first instance, that just and true measure is delivered from the vessels: thus making it evident that the belief entertained by Captain Bevis is not borne out by the experience of the coal trade.

I trust that this explanation I have entered into, from the best information, will clearly show that no loss ought to occur in the delivery of coals at Holyhead.

I have the honour to be, Sir,

Your very humble Servant,

THOS. M'KNIGHT.

J. R. Gardiner, Esq., Secretary to the Post-office Inquiry.

No. 104.

Mr. M'Knight to J. R. Gardiner, Esq.
Apr. 8, 1836.

Ratcliff Coal-wharf, 8th April, 1836.

Coals received into store by weight will not lose in delivery. Measure must be indefinite, and cannot be relied on. Coals received by measure (or by waggons supposed to contain a certain quantity in the North) on board ship, and delivered by weight, will often vary in the contents delivered: the same number of Newcastle chalders received per waggon will discharge 5 per cent. more or less than the quantity supposed to be on board.

General Post-office, 12th April, 1836.

SIR,—With reference to my letter of 9th instant, I have the honour to transmit, for the information of the Commissioners of Post-office Inquiry, a copy of a further communication from Mr. Goddard, dated 7th instant, relative to the measurement of the coals belonging to the Post-office at Holyhead.

I have the honour to be, Sir,

Your obedient Servant,

THOS. LAWRENCE,

In the Secretary's absence.

J. R. Gardiner, Esq., Office of Woods.

No. 105.

Mr. Lawrence to J. R. Gardiner, Esq.
Apr. 12, 1836.

Holyhead, 7th April, 1836.

SIR,—I am to acknowledge the receipt of your letter of 30th March, inclosing copies of letters from Mr. M'Knight to the Postmaster-General, dated 25th February and 8th March last.

I have also been allowed by Captain Bevis to inspect Mr. M'Knight's "Rough Inventory of Stores," &c. in his possession.

I have before me a Return of the Stores that ought to have been in hand on the 16th January, 1836, when I quitted office; but as I have no statement, nor does Mr. M'Knight's "Rough Inventory" contain any, of receipts and issues between that time and the date of taking stock of each kind in the different departments, it is not possible to ascertain from those documents what is the amount of deficiency or surplus in any one store; and I beg to

U

No. 105.

Mr. Lawrence to J.
R. Gardiner, Esq.
Apr. 12, 1836.

submit to his Lordship that I ought to be furnished with such a statement, and to have time to answer it, before any observations of Mr. M'Knight's are received to my disadvantage, or to that of any of the late officers of the establishment.

On Mr. M'Knight's letter of 8th March it is only necessary for me to observe that his reasoning on the issue of coal proves the store is founded on the assumption that the carts or waggons in which it was issued to the steam-vessels contained only sixteen bushels, whereas the storekeeper has taken credit for them as containing eighteen bushels each.

From Mr. M'Knight's "Rough Inventory of Stores, &c." furnished for my inspection by Captain Bevis, it appears that he (Mr. M'Knight) took the dimensions of the waggons, and ascertained them to contain "49.964½ cubic inches," wherefore, as the imperial bushel for coal is fixed at 2.815½ cubic inches nearly, the capacity of each waggon will be found to be 17.746 imperial bushels.

It is manifest that the store ought to be charged and discharged by the same measure, whatever it be.

The coal has always been landed from the colliers, and charged to the store, in "two-bushel tubs," made many years back by the Winchester standard; and it appears by the inclosed declaration of the masters that, according to the manner in which they were struck, it took nine such measures, or eighteen bushels, to fill a waggon.

As, therefore, the storekeeper was charged at the rate of eighteen bushels to the waggon, it is most clear that he ought to be discharged at the same rate; and as the waggon has herein (taking Mr. M'Knight's calculation of its capacity in cubic inches) been proved to contain nearly 17½ imperial bushels, there cannot remain a doubt of its being equal to contain eighteen Winchester bushels, at which rate the storekeeper has always charged it; and, consequently, that Mr. M'Knight's report of deficiency on the stock in store, and his farther allegation, by the application of his erroneous test to the issue to the packets for the last two years, are wholly unfounded.

I beg to observe, that a great deal of trouble would have been saved, and much explanation rendered unnecessary, had Mr. Roberts, the late storekeeper, been permitted to attend during the whole proceedings of taking stock—a permission which his Lordship, as explained in your letter to me, under date of 1st January last, deemed to "be due to him in common justice."

I have the honour to be, &c. &c. &c.,

(Signed)

NORRIS M. GODDARD.

G. H. Freeling, Esq. &c. &c. &c.

Declaration by the Masters of the Post-office colliers on the Holyhead Station.

We, whose names are hereunto subscribed, do hereby declare that, during the whole period of our service as Masters of the Post-office colliers attached to the Holyhead station whose names are set against our respective signatures, it has been customary, during the discharge of cargoes of coal from the said colliers in Holyhead Harbour, to send the daily supply to the steam-packets from the said colliers, in carts or waggons which have been filled by means of the "two-bushel tubs" used in hoisting the cargo out of the hold; and that nine of those tubs have invariably been required to fill each of those carts or waggons, thus making the contents of each waggon to amount to eighteen reputed bushels.

And we hereby further declare, that the remainder of the cargo of the colliers, respectively, under discharge at Holyhead, has in all instances been turned into the coal-yard at and by the same rate and "measure," whereof sixteen "measures," calculated to amount to thirty-two bushels, have constituted the "discharge-ton," and in like manner where the whole cargo has been turned into store.

JOHN THOMAS, of the "Colonel Liverpool."

ROBERT PARRY, of the "Duke of Montrose."

EVAN LLOYD, of the "Prince of Orange."

JOHN ROBERTS, of the "Petnam."

No. 106.

27, Fore-street, Limehouse, 14th April, 1836.

SIR,—In availing myself of your permission to look over Mr. Goddard's letter to the Postmaster-General of the 7th April, I feel it necessary to remark upon his statement respecting the iron sold by Mr. Johnston (E. 105.), as he seems desirous of showing it to be Mr. Johnston's private property, and not that of the Government, and consequently to set aside the effect of my Report on that head; it can therefore only be necessary for me to draw your attention to the fact, of various quantities of iron, of different denominations, sold by Mr. Johnston (E. 96.), from the General Post-office Stores, to Mr. Provis, in the months of July, August, September, and October, 1834—the period pointed out in my letter of the 13th January to the Postmaster-General, distinctly apparent in the day-book; kept by Hugh Williams, foreman to Mr. Provis, and which Williams has stated fully in his evidence before the Commission, thereby substantiating the opinion I gave of Mr. Johnston's fraudulent conduct.

With reference to Mr. Goddard's letter of the 7th, stating that my Report on the deficiency of the coals remaining in the Post-office stores at Holyhead has arisen from error in calcu-

lation of cubic measurement, stating at the same time "that it is manifest that the coals ought to be measured out by the same measure that they were received by," it must be matter of much satisfaction to me, that I fortunately made my final Report upon the coals so perfectly in accordance with Mr. Goddard's idea, in this instance, of a proper caution in the disposition of stores belonging to his Majesty's Government; for with the identical measures used to receive the coals into store I discovered that the deficiency existed, and not by cubic measurement, as will appear in my communication to the Postmaster-General, and which I have since, clearly I hope, stated in the evidence I had the honour to offer before the Commissioners.

I have the honour to be, Sir, &c. &c. &c.

To J. R. Gardiner, Esq.

No. 107.

To the Commissioners of the Post-office Inquiry.

Liverpool, 15th February, 1836.

GENTLEMEN,—I was informed by Mr. Gardiner that the commanders and engineers at Holyhead had given evidence that the tallow and oil supplied by me for the use of H.M. packets at that station were of bad quality: this information very much surprised me, as I have always, in conformity with the orders given to me, endeavoured to procure the best articles for Holyhead which this market afforded, and they were supplied on the express condition *that if not fully approved of at Holyhead, they were to be sent back to me at my expense.* Having carried on a respectable business here for more than half a century, I felt it due to my own character to endeavour to get samples of the tallow and oil which had been complained of, and to submit the same to the inspection of competent and disinterested persons for their opinion: some delay has taken place at Holyhead from the agent not feeling justified in sending samples without an order from the General Post-office, but at length samples of the tallow and oil have been sent to the Postmaster of Liverpool secured under the seal of the agent; the Postmaster has had them kept in his office under lock and key, and has shown them to seven persons, whom I have requested to examine them; these persons are importers of tallow and oil, brokers who constantly buy and sell those articles, and engineers. They have certified their opinion of the quality of the samples, and I now beg to solicit your attention to their certificates, which are enclosed herewith.

The agent, Captain Goddard, could have no motive or interest in allowing a bad cask of tallow or oil to be used, as he had only to say it was not approved of, and I was bound to take it back without a word and to pay all expenses (which was a penalty sufficiently great to prevent my sending a bad article). I cannot therefore believe that any complaint of the quality can have been made to the agent during the last twelve years, or he would surely have noticed it, and if the quality was so bad as the commanders and engineers now represent, there must have been a great neglect of duty somewhere in not having made it known to the agent.

No complaint as to the quality of the tallow or oil was ever made to me except once, in the year 1823, when a parcel of tallow was returned to me which was not liked at Holyhead, and the same tallow was afterwards selected in preference by the engineers of a private company in Liverpool. I beg to add that I have supplied tallow and oil for H. M. packets at Liverpool, Milford, and Port Patrick, and never had a complaint, and I believe that no complaint was made on the subject at those stations to the sub-commissioners on their recent examinations.

I am, Gentlemen, respectfully,

Your most obedient Servant,

CUTHBERT SIMPSON.

No. 107.

Mr. Cuthbert Simpson to the Commissioners of the Post-office Inquiry.
Feb. 15, 1836.

No. 108.

Memorandum as to the Vessels usually employed to convey Stores from Liverpool for the Holyhead Station.

In 1821, when I was first requested to order stores for Holyhead, I desired the tradesmen to ship them by any vessel about to sail.

In 1822 Mr. Goddard complained that the goods were sent sometimes in vessels which were dilatory in starting and made long passages, and he wished that the small traders might be employed, whose short trips and active masters marked them out as fit to be selected for the benefit of the service. As he knew more of the class of the vessels and characters of the masters than myself, I begged he would name those most suitable.

In 1823 he named the "Industry."

In 1826 the "Lord Edward," "Gleaner," and "Eliza Goddard."

In 1828 the "Dispatch."

In 1830 the "Echo" and the "Stanley."

The masters of these vessels have been in the practice of calling at the Post-office, Liverpool, on arrival, to state where their vessels were lying and on what day they would sail, and this information has been communicated to the tradesmen when occasion required.

I did not know to whom any of these vessels belonged.

WM. BANNING.

No. 109.

No. 109.

Mr. Banning's Memorandum of the authority for his services in ordering stores for Holyhead Packets.

Jan. 12, 1836.

Memorandum respecting the Authority under which Mr. Banning has given his Services in ordering Stores for the Holyhead Packets.

The first application to me to order stores was on 21st August, 1821, when Mr. R. H. Judd, the then agent at Holyhead, wrote to me, saying, that by desire of Mr. Freeling, who was then at Holyhead, he begged leave to enclose a list of articles wanted for the use of H. M. packets on that station, requesting that I would procure and forward them as soon as possible. I executed the commission to the best of my ability and on the best terms I could, conceiving it my duty to make myself useful to the department which I served. On the 6th September, Mr. G. H. Freeling wrote to me with reference to Mr. Judd's request, and added that he could rely on my employing persons of respectability to ensure the quality of the articles and at the lowest price. Mr. Judd continued to ask my assistance in the purchase of stores until December in the same year.

On the 20th December, 1821, Mr. Goddard, who had succeeded to the agency, wrote to me saying, he had learnt from Mr. Judd that he had been directed by the General Post-office to request that I would make purchases in Liverpool of such stores as were required for the Packet Establishment, and requested me to order some stores, which I attended to, and have continued to attend to similar requests ever since.

In October, 1823, a question was raised in a correspondence between the General Post-office and Mr. Goddard, as to whether the stores bought at Liverpool were purchased at a fair market price. Mr. Goddard wrote to me on the subject, and on 6th November, 1823, I detailed at full in a letter to Mr. Goddard the mode which I had adopted in executing the orders from Holyhead.

I stated my ignorance and inexperience as to the qualities of the various stores required, and my want of time to examine extensive stocks of importers, manufacturers, and dealers, if I had the requisite knowledge; that when first desired to purchase stores, feeling my own ignorance and inability, I asked the advice of some respectable merchants and shipowners as to the best mode of obtaining them at a fair market price and of the best quality: it was under their advice that I obtained from respectable ship chandlery warehouses* the several articles which have been sent from them, as I could depend on the *experience* of the proprietors in selecting a good article, and on their respectability in charging a fair market price: and the conditions of purchase were, that the goods should be sent back at the seller's expense, if not approved of at Holyhead; whereas, if I had sought out the importers or the manufacturers of each of the numerous articles, more time would have been requisite than what my official engagements allowed, and the result would, I fear, have been unsatisfactory both to Mr. Goddard and myself, as, if my want of judgment had selected a package of inferior quality, the importer would not have taken it back after it had been opened and tried.

In the selection of tradesmen I had no object but to find men whose integrity and respectability would be a guarantee as to the quality and price of their goods.† I showed some of the first accounts to some shipowners, who assured me the prices and discounts were the same which they paid on similar articles for their own use. In concluding my letter to Mr. Goddard I requested to be favoured with advice or instructions for my future guidance, which I should with pleasure attend to according to the best of my ability.

Mr. Goddard communicated my letter to the General Post-office, and I received a letter from the Assistant Secretary, saying my proceedings were very satisfactory, and that the office was not only satisfied but thankful for the assistance I invariably rendered.

My assistance has been perfectly gratuitous, and I have never received any remuneration, profit or advantage, *directly or indirectly*, for any service I have executed for the Holyhead station.

Post-office, Liverpool, 12th January, 1836.

WM. BANNING.

P.S.—Many of the tradesmen have been selected by the agent at Holyhead, viz.:—Mr. Laird, iron-founder; Mr. Mackell, rope-maker; Logan and Co., chain-cable manufacturers; Leishman and Welsh, coppersmiths; Forrester and Co., iron-founders; Mr. Goore, colour-dealer; Finch and Son, iron-merchants; Fawcett and Co., iron-founders; and the orders to most of these have been sent direct from Holyhead without Mr. Banning's intervention.

No. 110.

No. 110.

Mr. Spencer to the Commissioners of the Post-office Inquiry.

Dec. 19, 1835.

To the Commissioners of the Post-office Inquiry.

GENTLEMEN,—Pardon the liberty I thus take in addressing a few lines to you, with respect to the Holyhead station, as the interest I have at stake makes me anxious for the placing it on a firm, permanent, and efficient footing.

Actuated, therefore, by motives for the improvement of the communication between Ireland and the Metropolis, and to enable us to successfully compete with other stations,—I beg leave to premise, that the glaring evil so clearly proved by Sir Henry Parnell, in his evidence before a Committee of the House of Commons, in 1833—namely, the unaccountable degree of partiality evinced in favour of the Liverpool Station, by the Post-office authorities—still exists.

The disgracefully inferior accommodation afforded by the packets on this station, is a subject of constant and just complaint; and when it is considered the rank and respectability

* The Union Mill Company, Thompson and Cottingham, and Mr. C. Simpson.

† See the Postscript to this Memorandum.

which pass through this place, it is a subject of surprise how it has been suffered to exist so long. In this respect, how greatly the contrast appears between these packets and those on the Liverpool station, would be superfluous to point out. Another grievance in these packets is the absence of a female steward, which is a disgrace, I hope, to be soon remedied. That it is impossible for this station to be able to cope with others, without packets of greater power, and more suitable accommodation than those at present employed, is a fact that requires no very cogent arguments to prove; for while improved and enlarged packets are continually sent to Liverpool and elsewhere, those at Holyhead have remained, since steam-navigation was first introduced here, almost in *statu quo*, as to any material improvements that have been effected in them.

It is also necessary, in order to deal with Holyhead in a fair and impartial manner, to lower the fares of the packets to twelve shillings, which would exceed the proportionate ratio chargeable on this station in comparing the distances between Kingstown and Liverpool and Kingstown and Holyhead—the former being more than double the latter.

Supposing that these suggestions were adopted—if allowed to book passengers through from Dublin to London by the mails and post-coaches—I would, on behalf of myself and partners, guarantee to convey inside-passengers by mail from Dublin to London for 4*l.* 12*s.*, and paying all charges, except stewards, coachmen, and guards; and 2*l.* 17*s.* outside. We also would undertake to place on the road as good and as fast a light coach as “The Wonder,” which now runs from Shrewsbury to London, at the rate of ten miles and half per hour, in addition to the mails, so as to induce passengers to travel by way of Holyhead; the fares for which should not exceed the above sum. All parcels should be conveyed from Dublin to London, and *vice versa*, if under 24 lbs., for 5*s.*

The above arrangements refer to the arrival of the London or morning packet. For the accommodation of the public, we would likewise have a similar coach to start after the arrival of the evening packet—say half-past four, and to arrive in London next night at ten, being thus only one night on the road between Dublin and London.

Such would be our arrangements in the event of the packet-station at Holyhead being efficiently improved, without which all our exertions and endeavours to render this road at once as moderate as expeditious must prove abortive. Indeed, about three years ago it was our intention, seeing the manner in which this road had been deserted, to have put a first-class steam-vessel to ply between Kingstown and this port; which fact, being in London upon business with the Post-office, I acquainted the late Charles Johnson, Esq., then superintendent of the mail coaches, with; when he immediately answered, “*That if such were our intention, he would give us notice to quit working the mails, and that the Postmaster-General would immediately reduce the fares to a mere trifle.*” Upon which we, acting on the principle of—“of two evils, choose the lesser”—relinquished the scheme; and since then have had the sore mortification of witnessing many promises of suitable redress grossly and shamefully neglected.

Holyhead, December 19, 1835.

ROBERT SPENCER, Mail Contractor.

No. 111.

Memorial, recommending the Appointment of an Agent, in Dublin, for the Holyhead Mail-Packets; and of the fitness of Messrs. Charles and Robert Elliott, of Sackville-street, Dublin, for such Appointment, should it be made.

We, the undersigned, do certify, that we conceive it would be a great convenience to the public, if an agent were appointed in Dublin for the Holyhead mail-packets, at whose office berths could be secured by passengers, and from whom the information necessary for travellers could be obtained.

We also certify that we have, for several years last past, known Charles and Robert Elliott, of Sackville-street, in the city of Dublin, from having been in the habit of receiving or sending packages through their office, or of taking places from them in the Holyhead mails and coaches (for which they are agents); that, in our transactions with them, we have found them uniformly satisfactory and correct; and we believe them to be, in every respect, fit persons to act as agents in Dublin for the Holyhead mail-packets, in the event of such an appointment being made.

November 25th, 1835.

Memorial recommending the appointment of an agent in Dublin for the Holyhead Mail Packets.

Nov. 25, 1835.

No. 112.

N.M. Goddard, Esq.,
to G. H. Freeling,
Esq., with enclo-
sures.

Jan. 23, 1836.

No. 112.

Holyhead, 23rd January, 1836.

SIR,—I am to acknowledge the receipt of your letter of the 17th instant, enclosing copy of Mr. M'Knight's to you of the 13th, and giving me opportunity to clear my character from the imputations cast upon it, by furnishing you, for the information of the Postmaster-General, with a detailed explanation upon the points to which that letter relates.

With reference to so much of Mr. M'Knight's letter as state certain frauds to have been committed by Mr. Johnstone, the Resident Engineer, and by Mr. Roberts, the storekeeper, I have furnished those persons with copies of that part of his statement, and I now enclose their replies to the charges made against them.

It appears that in the quarter mentioned by Mr. M'Knight, Johnstone sold to Mr. Provis 1227lbs. of iron, principally in bars, for which he charged at the rate of 14s. 6d. per cwt.; but there is nothing to connect the iron thus sold, with the 514lbs. of boiler plate, spared in the same quarter to Johnstone and others, at 4s. 6d. per cwt.

On the contrary, it appears by Johnstone's statement that the whole of the iron furnished by him, amounting to 1227lbs. was new iron.

To shew me that he might honestly possess such new iron, he has laid before me an account, which I also transmit, of purchases made by him from various merchants since 1828, amounting to £242. 0s. 9d.

With reference to Roberts, it appears that certain stores, spared to Mr. Provis in the same quarter, have not been duly credited to the General Post-office, in explanation of which I beg to refer you to his letter herewith, and I add, that Roberts produced to me a memorandum-book in the handwriting of the clerk, which has every appearance of being genuine, and which he states was kept in the storekeeper's office in which the articles in question are duly entered.

Before entering on that part of Mr. M'Knight's letter which relates to myself, I beg to protest against my conduct being judged by the rules of the naval dock-yards of which I am ignorant, and which have never been prescribed for my guidance.

The first ground on which Mr. M'Knight justifies the opinion that I have been guilty of great supineness is,—

1. That I allowed the resident engineer to manufacture articles in the yard, for his own private emolument, as appeared from documents in my own handwriting.

It is true that in two instances I gave Johnstone written permission, and in two or three others verbal authority, to do work for his private emolument, and in one I sanctioned such a measure after it had been commenced without my knowledge.

Mr. M'Knight seems to charge me with granting a general permission of that nature, whereas the very circumstance of my having given authority in these particular instances, is in itself a proof that I gave no such general permission.

The instances in which I have given such permission, are those of the "Wakefield," the "Cintra," the "Marian Watson," the "Life-boat," and two small diving-bells.

The "Wakefield," a copper-fastened vessel, was stranded at Holyhead, and the wreck was purchased by Johnstone and some others; I permitted him to execute in the yard, after hours, the small quantity of iron-work necessary for her reparation. The iron used for that purpose was brought by Johnstone from Owen Prichard of Holyhead.

Douglas, the foreman of blacksmiths, kept, and handed to the storekeeper's office, an account of the coals used, and they were repaid in kind as soon as Johnstone, who was in the habit of importing coals, received a cargo of that description. The work was done entirely after hours, and the smiths were paid by the owners of the "Wakefield" for their labour in those hours.

"The Cintra" was a schooner, built at Holyhead, the Captain not being able to get the heavy iron-work executed here by private smiths, applied to me and I granted him leave to have it done in the yard.

The work so executed, consisted of two caps and hoops for the mast-heads, and a pair of davits for a boat, amounting in all to about seven cwt. The iron was Johnstone's private property, the work was done, and the coals were accounted for as in the case of the "Wakefield."

The "Marian Watson:" Johnstone agreed to make two small water tanks for this vessel, and they were partly executed before I was aware of it; but I sanctioned their completion. All the iron of which they were made was of a kind different from any that had ever been in the Post-office stores, and no coals were used but to heat the rivets.

Johnstone was allowed in like manner to mount a "truck-carriage" for the Holyhead "Life-boat." He was also allowed to make two small diving-bells out of old boiler plate, each weighing about 3½ cwt.

These are to the best of my recollection the only cases in which I have given the resident engineer permission to execute work in the store-yard for his own emolument.

In these instances I acted in full confidence that he would abide strictly by the conditions on which the leave was given, namely, that the interests and property of the Post-office should in no way suffer.

If it turns out that he has abused the confidence, I adopt the words of one of the Commissions of Post-office Inquiry, when I say, Mr. Johnstone was so much respected in the place that there was no wonder I should place implicit confidence in him.

2. "The next charge against me is, that I permitted the resident engineer to convey the Government stores in vessels belonging to himself, and that I paid him a higher freight than other ship-owners had offered to perform the same service for a vessel equally well adapted for the service."

No. 112.

N. M. Goddard, Esq.
to G. H. Freeling,
Esq. with enclo-
sures.

Jan. 26, 1836.

Mr. Johnstone is part owner of three small vessels that trade constantly between Liverpool and Holyhead, there are no other vessels which do so.

For several years past the stores have been conveyed principally in the vessels of which Johnstone is part owner. On three occasions these vessels have sailed from Liverpool without waiting to discharge their ballast, and with freight not exceeding £5, in order that the workmen at the Post-office store-yard might not be at a stand for want of the articles shipped by them, and they have in numerous instances sailed with half cargoes for the same reason.

The freight paid has been, and continues to be, the customary charge to this port, viz., for iron 10s. per ton, and for rope and small stores, 9d. per cwt.

The only offers which have been made to me to convey goods at a cheaper rate, have been by William Parry and John Price; these persons have come to me late in the evening, far advanced in intoxication, and made such offers. I neither accepted nor refused them at the time, but knowing the men to be much in the habit of delaying goods shipped in their vessels, and knowing also that they could not be depended on as "constant traders" to Holyhead, inasmuch as they frequently take cargoes for other ports, I did not, and do not, think I should have been justified in employing them, even at a lower rate of freight, a circumstance which I stated to one of the Commissioners, adding also, that were an order issued to me to employ them on that consideration, I should feel myself called on in the exercise of the discretionary authority entrusted to me for the management of the station, to disobey the order very frequently by employing other vessels, that the public service might not suffer from the known dilatory conduct of the persons above named.

Parry had been in command of one of Johnstone's vessels, and was discharged for his delays.

Price's vessel is a slow sailing sloop, and may not with any degree of activity in the matter make passages with the same regularity as Johnstone's vessels do.

The irregularity of both Parry and Price has been such as to induce several persons in Holyhead not to permit their goods to be brought by them.

I have, however, in reference to my selection of vessels, by which the Government stores should be conveyed from Liverpool, looked over all my letters to my official correspondent there since 1824, and find that in a few instances I name the vessel in which the goods were to be shipped, if I happened to know of one that was loading at the time. In very many instances I desire they may be sent "by first coaster;" but in much the greater proportion I leave the selection entirely to him.

The true reason why "Johnstone's vessels" have been chiefly employed is, because they have been under better control and management than the other coasters, and have from their regularity been almost invariably the first ready to sail.

The remainder of Mr. M'Knight's letter is rather a stricture on the general character of the establishment than any charge of misconduct against myself.

3. "Mr. M'Knight says, the measures used for issuing the oil out of the stores only contained three quarts instead of four to the gallon, which I fully ascertained."

The oil was invoiced to the stores by weight in most instances, as well as by measure; and the "measure," termed therein "a gallon," (before the introduction of the imperial measure) was estimated in those invoices at $7\frac{1}{2}$ lbs. The measuring vessel, mentioned by Mr. M'Knight, was made to hold exactly $7\frac{1}{2}$ lbs. of oil, and was in conformity with the term used in the invoices called a "gallon."

My letter to you, under date of 25th December, 1830, copy of which accompanies this Report, will be more fully explanatory of all circumstances connected with the practice in the issuing of oil, and of the adoption of the measure which has been in use since that period, and which is now adverted to by Mr. M'Knight, towards rectifying an inaccuracy in the size of the measure which, up to that date, has been used from the establishment of steam vessels at this station.

4. "A quantity of timber and plank of various descriptions is exposed in a public passage leading from the pier to the dock-yard, without any watchman or person to take charge of them day or night, being in the immediate vicinity of a building yard, and to the vessels moored close to the pier, affording every facility at high water to persons induced to plunder."

The smaller planks are all stacked in the yard, but it is not sufficiently large to allow of all the timber being placed in it, without piling it up in such a way as would be in the highest degree inconvenient when the carpenters have occasion to turn them over, particularly the round timber, to select pieces for use, a course of proceeding also which could not fail of being attended with much cost, especially if it were requisite in reference to the small space within the yard again to pull the timber up.

The timber which is on the outside of the yard consists of balk, large plank, and spars, of the description which is uniformly left unprotected by private merchants in this country, without any loss occurring. Two such persons have large quantities of timber so exposed immediately adjoining the building yard mentioned by Mr. M'Knight, which is nearly a quarter of a mile distant from the Post-office yard with a drawbridge to pass by the way.

Were this yard as near to the Post-office yard as are the vessels moored close to the pier, I should not apprehend any wholesale nightly plundering by the respectable ship-builders who occupy it, any more than by the masters of the vessels, acting on behalf of their owners, and in the face of watchmen on the decks of the neighbouring vessels.

5. "Neglect of mustering the men on coming in or going out of the yard."

There has not been any general muster, but the engineer, or the clerk, in the performance of their duty, went round to the foreman of each department, and received and noted from his report, the late arrival, the presence or absence of each workman in his department.

No. 112.

N.M.Goddard, Esq.
to G. H. Freeling,
Esq. with enclo-
sures.

Jan. 26, 1836.

6. "Neglect of searching the men to avoid the possibility of the loss of public property."

The property subject to depredation is of so bulky and ponderous a character, that the watchful eye of foremen and heads of departments has been considered quite sufficient.

Nothing but a case of extreme necessity could, in my opinion, justify the establishing a practice so revolting to the feelings of an Englishman, as would be a personal search. The moral obligation and sense of honour, which would be destroyed by such a regulation, are far better safeguards to property.

I cannot find that personal search is enforced at any private establishment, nor do I believe that any artizans of skill and good character would submit to it.

7. "The absence of proper checks in the delivery and expenditure of stores."

8. "Neglecting to have proper checks for the receipt, delivery, and expenditure of stores."

All stores are weighed, measured, or counted, as they come in, and compared with the invoices.

They are entered in books, when transferred from one department to another, and when the finished article or store is delivered out for use, entries are made in the storekeeper's books, or in those of the resident engineer, with the name of the vessel, or the use to which the store is applied.

9. "The want of proper approved demands being made for the supply of stores for such purposes as they might be required for."

Demands for stores to the vessels are invariably made, in writing, except in cases when, being on board the vessels, I have myself seen the want of a particular supply, and the storekeeper being present, I gave to him a verbal order to issue it.

I would beg to observe here that the number of clerks and assistants in the storekeeper's department is not such as to allow of going through the numerous formalities which seem pointed at by Mr. M'Knight.

Had any case come under my observation which shewed the necessity of greater caution than has been used, I should have thought it my duty to submit it to the Postmaster-General. I am, however, of opinion that the cost of increasing the number of such persons would be of greater amount than any advantage to be derived from it.

10. "Permission being granted to the principal officers and others of the establishment to purchase stores out of the dock-yard, and to dispose of them for their private emolument."

No such permission was ever given, except as stated in answer to charge 1.

Though I distinctly and clearly disclaim having given to Johnstone or to any other person, a general permission to work after hours for his own advantage, I do not wish to disguise the circumstance that I now find that Johnstone has been in the habit of having small matters done there for his vessels, his farm, &c.; but notwithstanding the severe scrutiny which has taken place, I have yet seen no reason to doubt his having conducted the whole on the same terms on which special leave was given to him as stated above.

11. "And many other instances which have more immediately come under the notice of the Commissioners of Inquiry."

This charge is so general in its terms, as to render it impossible for me to reply to it; should anything be brought forward in an answerable shape I will endeavour to meet it.

I have thus gone through the whole of the charges made by Mr. M'Knight in a manner which I hope may prove satisfactory to the Postmaster-General, but if it should appear to his Lordship that any of those charges are not fully met, I shall feel obliged by their being pointed out, as it is my most earnest wish not to slur over any part of them, nor to conceal or disguise any part of my conduct.

After having served the Post-office for 46 years, in the last 14 of which I have been placed in a situation of great labour and trust, I am pleased to find that I leave it without any charge affecting the fidelity with which it has been my constant wish to discharge my public duties.

With reference to Mr. M'Knight's observations on the establishment here, I beg to observe that though of late years it has been one of considerable magnitude, it has become such by imperceptible degrees since my appointment as agent. The regulations by which it has been governed are such as have been suggested by circumstances, as they from time to time have arisen, and if in its present state it should be thought by some that a sufficient number of persons has not been employed to check each other in the receipt, transfer, and issue of stores, it has arisen from no case having occurred shewing the want of those checks, and from my anxiety not to recommend to the Post-office an increase of the expenses without urgent necessity.

I must further be permitted to say that Mr. M'Knight's observations relative to the danger of plunderers from without are made in ignorance of the state of society, and under a false estimate of the moral feeling among the lower orders of this country. However applicable they might be among a dense population and in the vicinity of the established haunts of vice, they by no means apply to the circumstances of Holyhead.

During the first years of my agency, and before the present yard was enclosed, a very large proportion of the property of the Post-office here was, necessarily, quite unprotected, and though it occasioned me much anxiety, I never had reason to think that the losses, if any, were of serious amount.

I have the honour to be, Sir,

Your very obedient servant,

NORRIS M. GODDARD.

Holyhead, 20th January, 1836.

No. 112.

SIR,—In reply to yours, of this date, I annex a statement of iron furnished by me to J. Provis, Esq., from July to October, 1834.

N.M.Goddard, Esq.
to
G.H. Freeling, Esq.
Jan. 29, 1836.

In 1834 I purchased, at Liverpool, about 80 cwt. of bar and rod iron, for which I have vouchers. You will perceive, by the list, that all the bar and rod iron Mr. Provis had from July to October, 1834, *was new*, and from my own store. The 280 cwt. sheet iron, dated 17th September, was old iron, from the stores: it was too thick and heavy; I therefore exchanged it (I afterwards used and paid for it) for a particular kind of sheet iron that I had for making tanks, none of which description has ever been in or used at the Post-office stores.

I never did, or had a thought of defrauding his Majesty's Post-office of a farthing. I have exerted my skill and talent, as an engineer, to the utmost, for the advantage of the service, as the increase of speed in every steam-boat repaired by me will testify.

I make no petition to be reinstated in my former situation.

I remain, Sir, &c.

N. M. Goddard, Esq.

(Signed)

JOHN JOHNSTONE.

" "	68	rod

Holyhead, 23rd January, 1836.

SIR,—My motive in sending you this list of iron and other articles purchased by me, is to endeavour to do away with the opinion entertained by the Commissioners of Inquiry—viz., that I had no iron to dispose of but that which belonged to the General Post-office. As I have shares of several small coasting-vessels, and no regular ship stores being in Holyhead, it was far less expense for me to keep a small stock of different materials at hand than sending to Liverpool for every trifle I wanted.

I am, &c.

N. M. Goddard, Esq.

(Signed)

JOHN JOHNSTONE.

Holyhead, 21st January, 1836.

SIR,—I received your communication too late to reply to it last night. I find that there are two charges preferred against me, for not giving credit in the quarterly return of the sum of 3*l.* 4*s.* 8½*d.*, for stores sold to J. Provis, Esq., in September, 1834, and another sum not stated. I can only say, Sir, that I never, in my life, intentionally defrauded the Post-office of a single sixpence. The sum which I now find I did not account for, through the neglect of either my clerk or myself, is 3*l.* 15*s.* 1*d.*, which now appears in the regular memorandum-book always kept in the stores, where the different sales to Mr. Provis are entered—one sum, 3*l.* 4*s.* 8½*d.*, and the other, 10*s.* 5*d.*, same date, paid for by Captain Evans on the 12th December following; and there are still entries against Mr. Provis, since the delivery of the bill in September, 1834, of which he has not had a bill, as there was no particular time of the year at which bills for stores spared were sent in to him. I should hope no advantage will be taken of the error I have committed, when it is considered how much I was obliged to be out of the office upon other duty, and often taken away in a hurry, thereby liable to an error of forgetfulness, which I should hope might be overlooked; for I flatter myself that you, Sir, nor any other person who has any knowledge of my character, would suspect me, for a moment, guilty of wilfully converting such a pitiful sum to my own use.

I leave my superiors to deal as they please with me, only remarking that I never committed, nor intended to commit, a fraud upon the Post-office, or in private life.

I am, &c.

N. M. Goddard, Esq., Holyhead.

(Signed)

ROWLAND ROBERTS.

Agent's Office, Holyhead, 25th December, 1830.

SIR,—At a recent restowage, after the extension of the premises, of the various articles in store at this station, it was evident that the stock of oil, as stated in the storekeeper's monthly account for October, 1830, very much exceeded the quantity actually in hand, and I consequently directed the amount of this to be ascertained, when a deficiency of 316 gallons appeared. To endeavour to account for this result it became necessary, in the first instance, to review the accounts of the receipts and of the expenditure of oil at this station, from the commencement of the present establishment, to the 25th November, 1830, on which day the survey was made, it being possible that some error might have been committed in the various accounts which extend over a series of 9½ years.

I now enclose, for the information of the Post-master General, a summary of those accounts, by which it appears that error exists to the extent of only two gallons against the storekeeper.

It then became necessary to gauge and weigh the measure reputed one gallon, by which all the oil has been measured at its issue for service since June, 1821, and this was found to contain nearly ¼ parts of a gallon each, 1/13th part being taken at ½lb., or at the rate of

No. 112.
 N.M. Goddard, Esq.
 to
 G.H. Freeling, Esq.
 Jan. 29, 1836.

7½lbs. to the gallon, as charged by the merchant in his invoices; and at which rate consequently all supplies have been received into charge here by the storekeeper. A reference to the invoices from C. Simpson, of Liverpool, from whom all the oil which has been supplied to this station has been procured, will establish this statement.

The gross issue of oil up to the 25th November, 1830, amounts to 5064½ gallons, according to the measure above described. If that measure exceeded the true gallon by 1/12 part, the deficiency of the apparent issue, on comparison with the true issue, would be 337 gallons, but as the actual excess of the measure over the true gallon is rather less than 1/12 part of a gallon, proof of which I saw made, I esteem the over-issue, beyond the amount charged as such by the storekeeper in his several accounts, to correspond with the actual deficiency shewn at foot of the summary enclosed herewith, and to have arisen entirely and exclusively from the incorrect measure used here since June, 1821.

I have caused the rope in store to be weighed, and find it to be deficient 1cwt. 78lbs. of the residue which should be in store on a general review of the whole receipt and issue since the month of June, 1821, to the present period: which very trifling difference is fully accounted for, by a knowledge of the fact that the bands of all the coils of rope which have been opened in the stores, to be issued in portions for service, have been thrown by, as being of refuse hemp, and consequently useless, without being taken to the storekeeper's credit in account, although their weight has been charged for by the rope-maker, and has been admitted to the storekeeper's debit, when he charged himself with the amount of each invoice.

I enclose a summary of all the storekeeper's accounts of the receipt and issue of rope to the 14th instant.

I have ascertained that the iron of all kinds, the copper, and the smith's coal in store, correspond with the storekeeper's accounts, and I had an opportunity in the early part of 1829 to know that the store of coal also agreed with the storekeeper's accounts.

The stock of coal has been too large lately to admit of a comparison being instituted.

I am, &c., &c., (Signed) N. M. GODDARD.

G. H. Freeling, Esq., &c., &c., &c.

Holyhead, 11th February, 1836.

N. M. Goddard, Esq.
to
G. H. Freeling, Esq.
with enclosures.
Feb. 11, 1836.

SIR,—I have the honour to acknowledge the receipt of your letter of the 5th instant, enclosing an extract of so much of the Report from Captain Evans and Mr. Gardiner, on the Holyhead Packet Establishment, dated 6th January, 1836, as relates to me.

On comparing this extract with Mr. M'Knight's letter of 15th January, 1836, it cannot have escaped the notice of the Postmaster-General that Mr. M'Knight says he formed his opinion of the frauds alleged to have been committed by the resident engineer and the storekeeper, from investigations made by him under the information he received from the Commissioners above-named; whereas those Commissioners declare that they found their opinion, on the same part of the subject, on several cases they have investigated, and on the Report made by Mr. M'Knight to the Postmaster-General.

With these statements before him, his Lordship will be surprised to learn that up to this moment neither those Commissioners nor Mr. M'Knight have ever said or written one word to the resident engineer on the subject of the fraud with which they charge him; nor has Mr. M'Knight had any communication with the storekeeper as to his case; whilst with respect to the first, if not both, I am inclined to think that a more full investigation would establish his, probably their, innocence of the charges.

Extract of a Report from Captain Evans and Mr. Gardiner on the Holyhead Packet Establishment, dated 6th January, 1836.

1. On examining the store accounts our attention was in the first place directed to the manner in which the stores were supplied to the different vessels; we found that they were issued by the resident engineer and the storekeeper to the mates and engineers of the packets, no demand being made for stores of ordinary consumption nor any receipt given; but we were informed that the mates and engineers of the packets kept pass-books in which every article supplied from the Dock-yard, for their respective vessels, was inserted, and that their pass-books formed a check upon the issues of the resident engineer and storekeeper, as the quarterly returns made by the commanders were extracted from them.

2. Mr. Goddard states (Appendix, 22nd Report of Commissioners of Revenue Inquiry) that in examining the storekeeper's accounts of the uses to which stores issued have been applied, he compares them to see "if they agree essentially with the quarterly returns made by the commanders of all stores received on board the packets which they command, and where applicable, with the monthly returns, by the ship engineers, of stores received for the use of the department."

3. We compared the accounts kept by the storekeeper of the stores issued to each packet during the present year with the pass books of the mates and engineers, and the six lists we have made out of stores charged to those vessels by the storekeeper in the pass-books will enable the commissioners to judge of how far those accounts are to be depended upon.

4. Stores to a considerable amount appeared to have been issued to four colliers belonging to the Post-office during the same period. No receipt was given for these stores, and no account kept of them beyond the charge in the storekeeper's accounts.*

1. } The annexed three paragraphs of the Extract of
2. } the Report relate to the issues of stores to the re-
3. } spective steam-packets, and by implication charge the storekeeper with making false entries in his books of stores stated to have been issued by him, because corresponding entries do not appear in the pass-books of the mates and engineers of those vessels; in explanation of which I am to state for his Lordship's information, that the mates and the engineers occasionally attended to draw stores, under orders signed by me, without having their pass-books in which to make entry of the stores supplied; yet, and notwithstanding, from the necessity of the case, the stores were supplied, and entry of those stores in the pass-books was omitted at all subsequent opportunity.

Occasionally those stores were supplied to meet an urgent demand from the commanding officer of the steam-packet just as the vessel was on the point of departure on her voyage, and the customary form of entry in a pass-book was not attended to. And further I have to add, that when the steam-packets are in course of undergoing annual or other repairs, the various articles supplied are for the most part issued to and drawn by the various workmen for the uses to which they are to be put in their respective departments, unattended by the mates; who, at such times of general or occasional repair, have been in the practice of leaving their pass-books in the storekeeper's office, to be filled up by the clerk or the yeoman of the stores, either of whom may have neglected to make the entry.

Wherefore to some one, if not to all of those causes. (as the six steam-packets underwent the full customary annual overhaul and refit in the last year, the period stated by the Commissioners as being that over which their examination in this particular extended), and to the circumstance of all the timber and heavy iron-work supplied to the packets when under repair not being at any time entered in the several pass-books, may truly be attributed any difference between the entries in the pass-books and those in the storekeeper's accounts, and not to any intention of the latter to defraud the revenue by charging issues of stores which had not been made.

4. For the ordinary supply of stores to meet the "wear and tear" of the colliers, my own order was invariably given either in writing, or verbally on inspection, when necessary, of the stores to be replaced.

When these vessels were under repair, the storekeeper acted also in the capacity of foreman of shipwrights, so that there could be no other check upon him than the stores issued by his directions were entered by the clerk of the stores and not by himself, and were conveyed to the place of consumption by the artizans employed on the vessel.

* "There was no other check on the stores issued by the storekeeper to the colliers than the account kept by the storekeeper."—Mr. M'Knight's Evidence, App. (E.) No. 117, p. 189.

N. M. Goddard, Esq.
to
G. H. Freeling, Esq.
with enclosures.
Feb. 11, 1836.

Ap. (E.) No. 22.

5. In this day-book of the store-keeper's appears an expenditure headed "Spared Stores," which are stores supplied by the storekeeper and resident engineer without any direct authority from the Postmaster-General. The agent justifies himself in permitting those sales by stating that he has an implied understanding with Mr. G. H. Freeling sanctioning them, and that a regular account of such sales is transmitted to the General Post-office.

6. Although the spared stores sold and accounted for to the General Post-office are trifling in amount, the system gave a facility to fraud and speculation, which we have reason to believe, from several cases we have investigated, and from the Report made by Mr. M'Knight to the Postmaster-General, may have been carried to a very great extent.*

Ap. (E.) Nos. 86, & 117.

7. It is only surprising that, after it had become a matter of public notoriety and complaint on the part of the inhabitants of the town, the storekeeper and resident engineer should not have been prevented from selling stores or appropriating them to their own purposes.

Ap. (E.) No. 117.

8. There was no return made to the General Post-office of the receipt and expenditure of boiler plate, or of the materials for the construction of boilers, in the accounts of an establishment, the principal object of which is the manufacture of boilers.

Ap. (E.) Nos. 61, 68, 69, 73, 74, 75, 76, 77, 87, & 116.

9. The quality of the stores has been represented as very inferior, particularly the oil and tallow supplied for the engine rooms, which is said to be often unfit for use and offensive and disagreeable to passengers.

10. On inquiring why the commanders had not made a representation of the bad quality of the stores, we found it was owing to the manner in which any suggestion of this is received by the heads of the department.

Ap. (E.) No. 87.

This is noticed in a letter from Captain Davis; but a much more striking illustration will be found in the evidence of the late Captain Skinner before a Committee of the House of Commons.

* "You have stated that the sale of spared stores gave a facility for fraud and speculation?—Yes, there is no question of that in a public department.

"Do you believe that any such has taken place?—I do, most assuredly.

† "Mr. Goddard states that the resident engineer has with his concurrence borrowed and lent smiths' coal, but that those were cases of loan and not of sale; do you know whether they were cases of sale or of loan?—I am quite satisfied that the resident engineer did sell smiths' coals; I saw the bills of parcels and the receipts.

"Did he account to the Post-office for those sales?—No, not at all."—Mr. M'Knight's Evidence, App. (E.) No. 117.

Receipts for stores delivered from the depôt have not in any instance been required; but a regular account has been kept of them in the monthly returns of "the application of stores to use."

5. It has been the practice, frequently, to accommodate individuals by selling to them stores which were not immediately wanted in the yard. This may not have been in conformity with the rules for the government of the navy dock-yards; but as no regulation was laid down for my guidance, by which it was forbidden, I conceived myself at liberty to pursue it so long as I took due care that the interests of the revenue were not injured. In no case have stores been spared but at a rate which more than repaid their cost.

6. However objectionable this may have been, as affording "facility to fraud and speculation," and notwithstanding all the inquiry that has been made, I do not believe that any such have taken place. The charge against the storekeeper may be mentioned as a proof to the contrary; but that case must be looked into in a different manner from what it has yet been, before I can admit its force.

It is right to observe that the practice of sparing stores on the terms above described, to the resident engineer and others, is distinctly set forth in my communication to you, under date of 26th July, 1834, being my observations, made by your desire, on a letter printed in the "Mirror of Parliament" (as part of a corrected speech made by Mr. Wallace in the House of Commons, extracts of which you had enclosed to me for that purpose), to the whole of which, and particularly to the paragraph marked H in the copy appended hereto, I beg to refer you.

7. I have not heard of any complaint on the part of the inhabitants of the town, and no instance has come to my knowledge in which the engineer and storekeeper have resold stores which have been spared to them for their private use. The resident engineer has with my concurrence "borrowed" (not "bought") Smith's coal, to be repaid in kind by Mr. Provis, the engineer of the Harbour Commissioners; and it appears that he has done the like to some other persons without my previous leave or concurrence. These, however, are all cases of "loan," and not of "sale."†

8. Though not included in the monthly accounts sent to the General Post-office, the boiler plate was regularly passed through charge and discharge in the storekeeper's office.

The reason why it was not included in those monthly accounts was, that I never ordered from the merchant in Liverpool a greater quantity than was considered necessary for the particular purpose for which it was obtained, whether for building a new boiler, or for the general repair of an old boiler.

9. Complaints of bad tallow were made ten or twelve years ago, and the stock was returned to the merchant; since that period no "representations" have been made to me.

On this point, and the manner in which "representations" of the commanders have been received by me, I particularly beg to refer you to Captain Skinner's evidence before a Select Committee of the House of Commons in 1832, at page 59, in reply to queries 576 to 586, both inclusive.

Report of select committee on Post-Office communication with Ireland, p. 60.

11. Captain Skinner at that time particularly mentioned the weakness of the vessel (the "Escape") which he then commanded (one of the steamers built by Graham at Harwich). He also stated that none of the packets were supplied with any code of signals, and that they had not the means of extinguishing a fire on board, which can easily be obtained, and at a trifling expense, by merely attaching a branch pipe with a hose to the force pump in the engine room.

Ap. (E.) No. 54.

12. Unfortunately none of Captain Skinner's suggestions were attended to. After both he and his mate had been washed overboard, they found it necessary to strengthen the "Escape."

Ap. (E.) No. 70.

13. Up to this time, however, they have not been supplied with the ordinary means of extinguishing fire, although two vessels have been on fire and nearly destroyed.†

Ap. (E.) No. 117.

14. The manner in which the labourers and artificers were paid their wages appeared to us particularly objectionable. All the people under the orders of the storekeeper, and who are engaged by him, he paid weekly at a public-house of his own in the town; countenancing at the same time certain deductions or subscriptions from their wages to be expended in a particular shop in the purchase of clothes, &c.

15. The engineers, boiler makers, and smiths, were paid by their foreman at other ale-houses; these persons being the persons who kept the account of the labour which they paid for.

Ap. (E.) No. 42.

There was no regular muster in the dock-yard of the workmen; and we have reason to suppose that many have been frequently charged as employed in the dock-yard when they were absent.

Ap. (E.) No. 116.

16. On making inquiries respecting a sale of nearly twelve tons of iron to one of the blacksmiths in June last, we found that he had been absent for several weeks in Scotland, although regularly entered in the engineer's books as employed in the yard.

Ap. (E.) No. 47.

Ap. (F.) Nos. 33 & 34.

17. The contradictory statements of the storekeeper about the person to whom this iron was sold are worthy of attention.

11. The suggestions of Captain Skinner were made before a Committee of the House of Commons, and I presume that if they had been considered worthy of adoption, orders would have been given to carry them into effect.

12. The Commissioners have been entirely misinformed on this point. A reference to page 54 of the Evidence before that Committee of the House of Commons, and at query 459, will show the time (being nearly two years previous) when the "Escape" was strengthened, and the cause which induced Captain Skinner to make his representation of that vessel's weakness about the bows. Nothing has been done towards strengthening the "Escape" since that officer's unfortunate loss.*

13. See No. 11. Additional scuttles have been made over the coal-lockers, so as to facilitate the application of water by "buckets," which are the "ordinary" means of extinguishing fires aboard all vessels.

No "extraordinary" means had been ordered to be adopted.

14. I was aware that the storekeeper was in the habit of paying the men at his own house; but if any deductions were made of the nature mentioned in the Report, it was entirely unknown to me.

15. There is great difficulty in obtaining change on these occasions. The publicans whose houses are frequented by the men take care to be provided with it, and refuse to part with it except to their own customers.

There has not been any general muster; but the engineer or the clerk, in the performance of their duty, went round to the foreman of each department, and ascertained from his report, and by their own observation, the presence, the late arrival, or the absence of each workman in the department.

The foremen have not, under any circumstances or at any time, kept an account of the labour of the workmen in their several departments.‡

16. In this matter I admit an irregularity. Douglas, the principal blacksmith, at fixed weekly wages, having for many years been called on to work at extra hours, and frequently all night, without extra pay, had in justice a large claim on the Post-office.

On the occasion in question, he was absent by my leave, on very important private business, only ten days; on another occasion also, he was absent by my leave eighteen days; which two periods constitute the whole time of his absence from duty during a service of 9½ years, and I thought it but fair that, in consideration of such his claim, his weekly wages should be continued on charge, notwithstanding his absence. His just claim for extra time would have amounted to a very much larger sum than he received in this way.

17. Whatever may have been the storekeeper's statement as to the sale of 11 tons 18 cwt. of old iron, the transaction was as follows, viz. :—

There being in the store-yard an accumulation of upwards of 100 tons of old boiler plate and scraps, I agreed with Messrs. Mather and Co., of Liverpool (theirs being the highest tender), that they should have what we could spare at £3. 15s. per "long ton" (viz., at 120 lbs. to the cwt.) delivered free of charge to them at Liverpool. This iron, therefore, would have netted to the Post-office, after deducting freight, at 4s. per statute ton, and "dock

* "The 'Escape,' subsequent to Capt. Skinner's death, was considerably strengthened at Holyhead."—App. (E.) No. 54.
† "We, the undersigned commanders of the Post-Office packets on the Holyhead station, declare that the ordinary means of extinguishing fire on board steam-vessels, by having a branch pipe and hose from the forcing feed pump in the engine-room, is not adopted in any of the vessels we command."

‡ "There is not at present any code of signals on board of the Post-Office steam-packets under our command."—Statement of Commanders, App. (E.) No. 70.

§ "You have stated that there was no muster of the workmen in the Dock-yard—who kept an account of the time of their labour?—The time was kept by the different foremen of their own particular parties, and reported by them to the storekeeper and engineer; from which report the men were paid."

¶ "Who paid the workmen?—The storekeeper paid many of them, those particularly in his department, and the others were paid by the foremen of the different gangs, who themselves had given the account of the number of men employed, and the time they were employed, to the storekeeper and engineer; those men were all paid at public-houses."—Mr. McKnight's Evidence, App. (E.) No. 117.

No. 113.

N. M. Goddard, Esq.
to
G. H. Freeling, Esq.
with enclosures.
Feb. 11, 1836.

19. The resident engineer did not, in our opinion, possess the qualifications necessary for his situation. The scientific work was all performed by two of the workmen under him.

Ap. (E.) Nos. 78 & 79.

19. He has been permitted by the agent to make some important alterations in the engines of the packets, the nature of which Mr. Goddard, by his own statement, appears to have been ignorant of, and there was no authority from the General Post-office to permit these alterations.

Ap. (E.) No. 24.

20. The change he made was by placing a double load on the valves and altering the slides so as to produce highly-elastic steam on the expansive or high pressure principle, which would have been dangerous with old boilers.

Ap. (E.) No. 71.

21. The storekeeper appeared totally unfit for his duty; but the frauds which we have investigated affecting both him and the resident engineer, make it unnecessary for us to say more of these two officers, than had there been proper control exercised either by the agent or Mr. Freeling, they would have been both removed from their situations before our arrival at Holyhead.*

22. The Commissioners will observe the anxiety evinced by Mr. Goddard to disclaim all responsibility with respect to the receipts and issues, quality and prices of the stores, and the accuracy of the accounts kept in the dock-yard. We cannot, however, imagine that it was intended to extend the entire control of the store department to the storekeeper and the resident engineer, when we refer to the evidence of Mr. Freeling and the minute specification of Mr. Goddard's duties in his letter to the Commissioners of Revenue Inquiry.

Ap. (E.) Nos. 28 & 26.

Ap. (H.) No. 8.

23. Mr. Goddard admits having sanctioned the sale of stores by the resident engineer and storekeeper to private individuals. He also says that he permitted the resident engineer to work up articles for his own emolument, to take smith's coal from the store and repay them in kind without any account or check being

Ap. (E.) No. 25.

* "Mr. Goddard, the Agent at Holyhead, stated to Captain Evans and Mr. Gardiner that he is not responsible for the issue of stores, for the receipt of stores, for the quality or price of stores, for the labour accounts, for the storekeeper's accounts, nor for anything connected with the engine department. He further said, that there is not a single book kept in the Dock-yard, for the accuracy of which he can answer. Do you consider that Mr. Goddard was justified in making that statement?—I would say very broadly, that that statement of Mr. Goddard is wholly contrary to my idea of his duties as an Agent; for if that statement be correct, I cannot answer the question better than by putting another—What can have been the use of the appointment of an Agent? As for the books and accounts in the Dock-yard, as it is termed—that Dock-yard was a creation of his own, left entirely to his management, and who was to be responsible except the Agent, the Postmaster-General's officer, I cannot possibly imagine."—Mr. G. H. Freeling's Evidence, Ap. (H.) No. 5.

† "You stated that the resident engineer frequently sold smiths' coals; was any account or check kept of the quantity delivered out of store?—I found none whatever in the department.

"Have you reason to believe there was any?—I am satisfied there was none."—Ap. (E.) No. 117.

and town dues" at Liverpool, not quite £3. 6s. per statute ton.

After the iron had been set apart for sale, Douglas, the principal smith, requested leave through the resident engineer to select ten or twelve tons of it for his brother, who is a blacksmith in Scotland, and I permitted him to have it at the price of £4 per statute ton, paid at Holyhead. There was consequently on this transaction a clear gain to the Post-office of £9.

18. The resident engineer is not able to make finished drawings of machinery.

It may be difficult to define what are in other respects the qualifications necessary to enable a man to do the duties of an engineer, or to judge of those qualifications in others.

Johnstone states that he has served his regular apprenticeship to a millwright and to an engine-founder. He was constantly employed on sea-going engines, from their first application to the propelling of ships; and if his fitness for his duties is to be judged of by the performances of the vessels which have been repaired at Holyhead, there can be little doubt that the Commissioners have come to a wrong decision respecting him. The evidence appended to the Report will probably show how far they have pursued their examination of him, and how far they have found him deficient in the various branches of an engineer's duty.

19.) I admitted to the Commissioners that I had not been educated as an engineer; but I must have been blind indeed to the nature of steam if, in fourteen years' experience with steam-ships, I had not become acquainted with the effect of loading the valves.

The extent to which the valves have been loaded at Holyhead has always been in proportion to the strength of the boiler; and while the boilers of steam-vessels on the Clyde have been subjected to pressure at the rate of 10 or 12 lbs. per square inch, ours have in no case been loaded beyond 6½ lbs., although far stronger than those of private vessels.

21. The storekeeper was appointed at a time when the establishment was on a very small scale; he is an intelligent and useful man in conducting the repairs of vessels, and his want of skill in the keeping of books was supplied by giving him an efficient clerk.

22. I have not been anxious to disclaim any responsibility which justly belonged to me.

I disclaim being responsible for the prices and qualities of stores purchased by Mr. Banning; and for the custody of stores kept by the storekeeper appointed by the General Post-office.

I also disclaim being answerable for inaccuracies in the detail of the accounts of the sub-officers.

These disclaimers are strictly in accordance with my letter of 8th January, 1829, referred to in the Report which I now reply to, and with the statement by me relative to the custody and care of the stores, which appears in the Appendix to the 22nd Report by the Commissioners of Revenue Inquiry, p. 437.

23. For my answer to this I beg to refer you to the former part of this letter, in answer to No. 6.

As the loan of smiths' coal, in those cases where it was sanctioned by me, was a mere temporary accommodation, it was not thought necessary to make a formal entry of it in the books; but it is erroneous to say that "no account or check was kept of the quantity taken out or returned into store."†

kept of the quantity taken out or returned into store.

24. Mr. Goddard was not only aware that the resident engineer and storekeeper were both engaged in trade, but has employed the vessels belonging to Mr. Johnstone (the resident engineer) for the conveyance of the Post-office stores from Liverpool to the entire exclusion of the other vessels trading between Holyhead and Liverpool, the owners of which had offered to convey the stores for a much less freight than was charged by Johnstone, the resident engineer.

25. The person employed as gatekeeper of the dock-yard, and who had to examine the passes, we found could neither read nor write English.

26. After our arrival at Holyhead, Mr. Goddard became aware, for the first time, that the gatekeeper had a key of the dock-yard.

27. And that one of the labourers had a key of the coal store.

In my reply dated 23rd January last, to Mr. M'Knight's charges, I have fully explained the instances wherein I gave permission to the resident engineer to work up articles for his own emolument, and to that letter I request reference to be made.

24. This charge is so fully answered in my replies to Mr. M'Knight, and in my letter (at paragraph 2) dated 26th July, 1834, and appended hereto, that it scarcely seems necessary for me again to revert to it, as I have there set forth the reasons why Johnstone's vessels were principally employed, the rates at which they were paid, and the grounds on which I declined accepting the only tenders that had been made to me to convey stores at a lower rate.

25. If it be deemed necessary to establish a rigid system of passes, the person hitherto employed as gatekeeper is undoubtedly unfit for that office.

26. I was always aware that the gatekeeper was in possession of the key of the gate of the outer yard, from the hour when it was closed at night until it was opened in the morning. The recent discovery, alluded to in the Report, is that the key continued in the possession of the gatekeeper during the day, while the gate was open, instead of being hung up in the resident engineer's office as it had used to do.*

27. The occasional very early or very late issue of coals made it necessary at times to confide the key of the coal-yard to the person charged with the superintendence of that duty. The placing of it permanently in his custody was an act of the storekeeper's without my knowledge, as was the obtainment of a duplicate-key of that yard, to remain in the storekeeper's possession.

I have thus gone in detail through the various charges contained in the Extract of the Report, and will trouble his Lordship no further at present; but if at a future time I should think it necessary for my justification to make other observations on the Report, or the evidence (when known to me) by which it is supported, I trust I may be permitted again to present myself to his attention.

I have the honour to be, Sir,
Your most obedient Servant,
NORRIS M. GODDARD.

Copy of a Paper transmitted to Sir F. Freeling, Bart., by the Agent for Packets at Holyhead, under date of 26th July, 1834.

Copy of a Letter which Mr. Wallace, in his corrected Speech in the Parliamentary Mirror, gives as one received from Liverpool by him.

Liverpool, April, 1834.

"SIR,—I wish you would inquire a little about the infamous work going on at this place, at Dublin, and at Holyhead, and begin with the latter.

"Why are all the steam-packets to Holyhead to be repaired, from this place, from Dover, from Donaghadee, Weymouth, and even Milford, where there is a fine naval yard? I will tell you why; Holyhead is a little sly corner where ——'s dear friend and agent, ——, and a Scotchman, carry on their work unobserved."

Copy of Observations made by the Agent at Holyhead, by direction of Sir F. Freeling, on the annexed Extract of a Letter to Mr. Wallace, given by him as one received from Liverpool.

A. It is true that steam-packets from the several stations, which are named in the annexed extract, have repeatedly undergone general repair at Holyhead; but it is not true that the Postmaster-General has so ordered it "because the agent and the resident engineer" (whom probably the blank intends) "carry on their work unobserved," but because the work is executed fully as well as, and at a much smaller expense than would be incurred at, any other seaport, or at any shipwright's, engine-founder's, or boiler-maker's establishment; and because the several superintendents of the respective descriptions of work esteem it essentially their interest, as it is their practice, to see that materials of unexceptionable quality alone be used, and that the workmen execute the work faithfully; thereby to ensure durability in service, and thus to establish a proof of their zeal and capability in the duty required at their hands.

B. Further, because as all the materials and stores required in repairs and outfit are obtained at wholesale price by the General Post-office, that department, through the agency of its officers at Holyhead, virtually

* "A few days ago Mr. Goddard became aware that the gatekeeper had a key of the Dock-yard—believes he has had this key for two years in his possession."—Mr. Goddard's Statement, App. E. No. 26.

No. 113.

N.M. Goddard, Esq.
to
G. H. Freeling, Esq.
with enclosures.
Feb. 11, 1836.

[Copy of a letter which Mr. Wallace, in his corrected speech in the Mirror of Parliament, gives as one received from Liverpool by him.]

"They say workmen are cheaper at Holyhead,—that is false."

"I must tell you that every particle of materials is carried from Liverpool to Holyhead.

"This ——— is whole or part owner of five or six vessels that convey all these materials: he has also shares in other trades, all of which are repaired at Holyhead, and it is well known that ——— goes snacks."

becomes the chief of the various trades which are necessarily had recourse to in the repair and equipment of a steam-vessel; thus saving the whole of the profits which usually go, in no small proportion, to the heads of the private establishments, in whose hands vessels are placed to undergo repair; and assuring to itself good and faithful work in return for its expenditure.

C. It is not "false," be the statement made by whom it may, that "workmen are cheaper at Holyhead;" on the contrary, it is perfectly and undeniably true that the wages of workmen at Holyhead are much lower than at Liverpool or London; and that as steam-vessels when under repair at Holyhead are placed immediately in the vicinity of the government works, the transport of materials between them and the vessel is effected rapidly and without diminishing, in any sensible degree, the space of time or working hours of the artisans on board; "time" occupied in his work or labour being the measure for the wages which he receives; whereas, either in the port of Liverpool or in the Thames, it may be truly stated that one-third of the day's work of the artisan is consumed in his journeys between the vessel and the distant shore-establishment to which the charge of the repair has been confided, and in the conventional arrangement with the workmen, whereby they are permitted to withdraw, at stated periods, for "refreshments," in addition to the ordinary portions of time allotted for regular meals; whilst as would respect the remuneration for the agent's services in his quality, assumed through the necessity of the case, of general surveyor, planner, and superintendent of those repairs, in addition to the legitimate duties of his office, he laments to know that neither the highly-valued friendship of the individual most probably alluded to by the writer of the letter, nor the just consideration of the chief of the department, has obtained for him as yet a revision and proportionate increase of his salary and appointments, now that his charge has swollen from three steam-vessels and one sail-vessel, in 1821 (when he entered on the duties of his office), to nineteen steam-vessels and five sail-vessels, the general repairs of which he is called on to superintend, as well as the occasional repairs of such of that number as are attached to the Holyhead station; viz., 6 steamers and 5 sail-vessels.

D. It is not true, that every particle of materials is carried from Liverpool to Holyhead; because every foot of fir, ash, birch, beech, elm, and oak timber, which has been used at the Holyhead station for several years past (with the occasional exception of a heavy piece of keel or mast), has been laid down at Holyhead for sale by private adventurers who charter direct from the colonies, or from the Welsh oak forests.

E. It is believed, by the agent, to be true, that "the resident engineer, Johnstone, is part owner of five or six vessels;" and that they convey from Liverpool a small part, and not the whole, as before shown, of the stores required towards the general repairs of steam-vessels at the Holyhead station.

F. The writer of the letter from which the annexed is extracted, might have added, that those stores are conveyed at the customary rate of freight between the two ports; and that when any particular store is required from Liverpool at a stated period, or without loss of time, it has frequently happened that those vessels have either sailed with only half a cargo on board, to ensure a quick delivery at Holyhead of the article needed—or have, with a full cargo, deferred their departure from Liverpool for several days, solely for the purpose of bringing the piece of machinery, after having been prepared at the engine foundry.

G. It is true, that those vessels occasionally undergo repair at Holyhead, and that the repair is executed by the same ship-carpenters as are employed in the occasional repair of the steam-packets; but as those men are free to work where they can obtain employment, it may readily be believed that, when they are employed on

[Copy of a letter which Mr. Wallace, in his corrected speech in the Mirror of Parliament, gives as one received from Liverpool by him.]

vessels belonging to private individuals, their wages are not paid by the agent for the Post-office steam-packets.

H. If it be insinuated by the writer of the annexed letter, that all the stores which may be needed in the repair of those private vessels are supplied from the Government works at Holyhead, or if any be spared from thence, that such supply is at the cost of the revenue,—such insinuation would avail little, were an inquiry instituted against distinct entries, in the agent's accounts, to the credit of the General Post-office, of the full cost-price, including freight, of all naval stores spared, whether to the resident engineer, or to any other private individual (of which there are numerous instances), in consequence of their application to the agent, when in distress at this out-port; which not only has not a tradesman in a condition to furnish such supplies, but where many of the tradesmen in their difficulties, arising from scarcity of stores in their respective trades, also apply to the agent for assistance towards meeting the demands of their customers,—a practice of relief which has been sanctioned by the General Post-office, when it can be afforded without inconvenience to the station, in consequence of the poverty of the tradesmen of Holyhead, and the hardships which the shipping interest would be exposed to were that permission to relieve withdrawn.

I. If the agent (who probably is intended by the blank in the annexed paragraph) “goes snacks” with the owners of those five or six small vessels, that fact is not as “well-known” to the person who would be most likely to be privy to it as to the not especially veracious writer of that assertion.

“As a proof of those dishonest doings there have been serious robberies in the Government-yard lately, and all was hushed up for fear the men should tell tales.”

K. It is not true that “there has been serious robberies in the Government-yard lately,” or at any time since it has been established; consequently it cannot be true, that “all was hushed up, for fear the men should tell tales;” whilst the only “dishonest doings” are the unfounded assertions of this apparently anonymous calumniator, whose definition of “proof,” after this example of his argument, might not safely be relied on.

NORRIS M. GODDARD, Agent.

Holyhead, 26th July, 1834.

No. 113.
N. M. Goddard, Esq.
to
G. H. Freeling, Esq.
with enclosures.
Feb. 11, 1836.

No. 114.

AN INVENTORY of Stores, Implements, &c., taken between the 16th of January and the 8th of February, 1836.
By T. M'KNIGHT, R N., pursuant to an order from the Postmaster-General.

Species.	Quantity.	Weight.				Remarks.
		Tons.	Cwt.	Qrs.	lbs.	
Anchors, New	{ 1 in No. }	0	9	0	8	No notice of these articles made in the accounts sent from this Department to the Post-office, showing how any of them are in any way disposed of, or what number or quantity may remain at any period of the year, and therefore no comparison of the stores or charge can be made with this survey.
„ Old, unserviceable	12 „	0	6	0	4	
„ Mooring	1 „	0	16	1	0	
Awnings, New—3½ yds. by 2½ yds.	2 „					
„ Curtain	1 „			4	yards	
Axes, Chopping	2 „					
„ with handles	1 „					
„ Pick	2 „					
Bags, Nail	16 „					
Ballast Iron Pigs	440 „	16	10	0	0	
Balls, Musket	2220 „					
Barrows, Wheel, new, complete	6 „					
„ ditto, ditto, not complete	11 „					
„ for coal vessels	8 „					
„ general use	25 „					
„ Trucks	4 „					
„ ditto, with Water Cask	1 „					
Bayonets, with Scabbards	66 „					
Beds, Feather	17 „					
Bench, wood in Armory	1 „					
Binnacle, wood, old “Wizard”	1 „					
Blocks, treble, 24-inch, purchase brass, sheaves wrought iron	3 „					
„ ditto, 19-inch, ditto, ditto	2 „					
„ ditto, 17-inch, ditto, ditto	1 „					

Inventory of Stores, Implements, &c.—continued.

Species.	Quantity.	Weight.				Remarks.
		Tons.	Cwt.	Qrs.	lbs.	
Blocks, Single, 24-inch, purchase brass, sheaves wrought iron	2 in No.					The same remarks apply to this page as in the preceding.

Coal, common		778	0	0	0	
,, smith's		28	15	0	0	

Not reported in the usual returns; and as no charge appears, no check of the accuracy can be made.

No returns made upon these items, as noticed above.

In use by the packets.

In engineer's and storekeeper's offices.

These articles not having been reported upon, leave the same in doubt and obscurity as to correctness.

The coals having been measured by cubic measure, under the orders of Captain Hevis, the agent, show a deficiency of 200 tons, upon which Report the Agent has thought it necessary the whole remains to be accurately ascertained by bushel measure, upon which a further Report will be made.

Horse, box and matting	1 „					Recommended to be most carefully looked over before sold, to prevent loss to the crown. The weight of the broken boilers averaged, not having means to weigh them or leisure to break them up. Taken from the heap of old iron, which induces the above recommendation. Stated to be of no use, and recommended to be sold. No part of the above considerable quantity of iron appears from any document to be on charge. No accounts in office to show the quantity of these stores on charge, or what ought to be remaining, and therefore deficiencies cannot readily be discovered.

Inventory of Stores, Implements, &c.—continued.

Species.	Quantity.	Weight.				Remarks.
		Tons.	Cwt.	Qrs.	lbs.	
Oakum		0	2	3	12	Eleven short of the remains per account. Thirty-one surplus upon the remains per ditto.
Oars, ash, new	54 in No.					
" fir, do.	36 "					
" sweep	2 "					
Oil, sperm	55 galls.					A surplus of 150 imperial gallons upon the store account; but allowing the quantity issued during the last twelve months to have been received into store at the imperial measure, there should have been a surplus of 280 gallons, in consequence of short measure issued out. The whole is reported upon in the storekeeper's account in the aggregate, although the prices differ materially. The measures are reported to have been made and brought into use by Mr. Roberts, the late storekeeper, and that they were not used for the receipt, but for the issue of the oil for upwards of six years.

THOS. M'KNIGHT.
THOMAS HYLAND.

Dated at *Holyhead*, this 22nd day of *February*, 1836.

No. 115.

Return from
Captain Bevis,
of value of stores at
Holyhead.

No. 115.

EXTRACT from a Return received from *Captain Bevis*, the Agent at Holyhead,
17th March, 1836.

The total value of stores and materials provided for the service of the General Post-office,
and now in store there, amounts to £12,200. 12s. 10½d.

(Signed,)

THOMAS BEVIS, Agent.

EVIDENCE of Mr. M'KNIGHT, relative to the ESTABLISHMENT at HOLYHEAD.

No. 116.

Mr. T. M'Knight.
March 14, 1836.

No. 116.

Monday, 14th March, 1836.

Mr. *Thomas M'Knight* was called in and examined as follows:—

You were appointed by the Post-office to examine the stores and take charge and render an account of the stores at Holyhead?—I was.

Were you appointed upon an application of the Post-office to the Admiralty?—I was.

Had you been previously accustomed to the care of stores?—I had been an agent victualler at Jamaica. I was fourteen months performing duty for another person. I was a purser in the navy, and was appointed by Sir George Cockburn to act as agent victualler.

Will you tell the Commission in what state you found the dock-yard establishment upon your arrival at Holyhead?—On my arrival there I found some of the stores scattered about in a very loose manner; a great part of them totally unprotected, without wall, or lock, or watchman, and consequently there was no safeguard at all over the stores, inasmuch as many of them might have been taken away by any person that thought proper. A considerable quantity of timber plank and things of that kind might have been removed from the place where they were stowed, being close to the pier, when at high water any person during the night might take them away. Vessels are constantly lying in the harbour moored close to the pier, sailing at all hours of the night according to the tide; affording a very considerable facility, of course, for plunder, and which there was no precaution used for preventing, as there was no watchman.

Had any account been put into your hands of the quantity of stores and goods there were belonging to the Post-office?—On my arrival at Holyhead there was an account put into my hands, such as it was; but it was particularly imperfect, not one-half of the things that were in the establishment were made any return of whatever, to show the particular kinds, particularly the things most generally manufactured in the establishment: with respect to them, no return was made at all.

Will you specify some instances of stores of which no return was made?—The principal business of the establishment is the making of boilers and chimney-funnels for steam-packets, and there was no boiler-plate on the account returned; no angle-iron, or rivet-iron, or sheet-iron, or chimney plate-iron; and all those things which are the most valuable on the establishment, were not at all returned to the Post-office in the account I received.

Is any official brand or mark used for the stores at Holyhead?—Sometimes there has been, though not generally.

Did you find any of those articles upon the department?—I found a great quantity on the survey: there was a very considerable quantity of boiler-plate, angle-iron, &c., in the stores, but not on charge. On that account, therefore, I had no means of ascertaining what the deficiency might be. The report I have drawn up will show the quantity in store to be some 50 or 60 tons. I suppose there were upwards of 120 tons of old iron, or about that, which I found on the survey, of which no account whatever appeared on the books of the stores, and among that a very considerable quantity of good iron was picked out by ourselves in the survey, which was mixed up with the old iron; for whose advantage I cannot say.

Does it appear that the account kept of the receipts and issues afforded any check upon the remains of the stores?—None whatever; as it is impossible to trace any charge or remains by the account, which my Report upon the survey will show.

Have you any reason to believe that such an account had ever been kept?—I am persuaded it never had, as there was no person upon the establishment who could tell me the quantity of any of these stores remaining, or what quantity was on charge.

Are these accounts very accurately kept in the King's naval dock-yards?—Very accurately; they are most minute, and upon that system, I have been called upon by the Postmaster-General to offer forms for the establishing accounts in that department, which I am on the point of doing. I am now preparing them, by which mode of account you will be able to tell the smallest quantity of stores that would be in the department at any time.

Is the system you recommend exactly the same as the practice in the King's naval yards?—Quite so.

In what way had the stores been issued out by the storekeeper?—In some cases by the order

of the agent, but in general by the direction of the engineer,—the late resident engineer, upon his verbal authority, latterly. Formerly there were orders for issuing the stores, which were signed by the agent, but that has, in a great measure, been discontinued and not acted upon in many cases for some time past. The stores for manufacture are more generally issued by the verbal order of the engineer.

Will you inform the Commission whether it is the case with coals, or any of those articles in constant consumption, whether they are issued upon the verbal order only of the engineer? —Yes; for the manufacturing of boiler plates, or anything connected with the blacksmiths' department.

Do you mean to state that in the case of coals there was no record whatever kept?—There was an account kept of coals, but it was a very imperfect one, inasmuch as it was so imperfect that there was a considerable overcharge: they charged a great deal more for the packets than the packets received. I have written a letter, stating that circumstance to the Postmaster-General.

You ascertained that from the captains of the packets themselves, did you?—I ascertained it from the nature of the duty which I had to attend to. I was directed to take an inventory of the stores. Among other things I had to take an inventory of the coals. The coals were a very large mass of upwards of 900 tons, and the agent, Captain Bevis, thought it would be very inconvenient to enter into the minutiae of measuring by bushel, but that I could ascertain the quantity by cubic measure. I accordingly did so, and found by that measurement 200 tons short of the quantity which they stated to be in store. I made a report of that circumstance to the Postmaster-General, and the agent desired me to measure them by bushel measure, not being satisfied with the calculation I had made on account of the great difference from the store account. I then went through the whole quantity of 970 odd tons, and my measurement showed a deficiency of 197 tons, making a difference between my report by cubic measurement and the actual measurement by bushel of three tons only; and in the performance of that duty I found it necessary to measure the waggons that are used for supplying the steam-vessels with coals. They are stated to contain 18 bushels, and as it was impossible I could measure the whole by bushel measure, having to remove a great number into another yard to make room for the operation of that duty, I measured first the bushel, to ascertain if that was correct; I then measured the waggons with that bushel to see what they contained, and I found that they contained only 16 bushels, whereas they had always been charged to the packets as 18, and in one instance which I brought under the notice of the agent, one waggon was sent out for delivery which I ordered to be brought back again, and on measuring it found it only contained 15 bushels. It was measured before the agent himself, in order that he might be satisfied with the conduct I was adopting. *I have thereby proved an overcharge to the steam-packets annually of 1000 tons of coals.* I can prove that clearly; but with respect to the other stores, I could find no books or account showing what remained; in many cases I found by survey what the quantity was; but what ought to have remained I could not tell.

Who has the charge of the coals?—The storekeeper.

He is accountable to the Post-office for the issuing of stores, is he not?—I do not know; the agent is supposed to be the accountable person, I presume, but the storekeeper has the management of the issue of them under the agent.

How are the coals placed? in what situation are they placed when they come from the contractor?—They are brought by the vessels and discharged by labourers into the coal yard.

Are they weighed or measured when they are received?—They are measured.

Who sees them measured?—There are persons appointed by the agent or storekeeper—whoever they think proper—some poor, unfortunate old fellows; and they render an account of the quantity turned out, and that is taken on charge by the storekeeper; but the persons that are employed on that business are generally utterly incompetent.

When coals are put on board the packet, who sees them put on board?—There are three or four men employed to fill the waggons, and there is another man down at the pier to see these coals put on board the vessels: there are no other persons to do this business but labourers.

Must the quantity that is delivered from the contractor be the real quantity that is stated in the contract?—It ought to be.

Had you sufficient check for that?—I believe they will generally be found to turn out more than the contractor's invoice, in almost every case.

Do you know any particular case in which the quantity stated to be delivered was much larger than that which really was delivered?—Yes; I have the particulars of three vessels here where I found that to be the case; but I have one instance of a vessel, the name of which I believe is the "Pelham," where the invoice quantity is 60 or 70 tons; I am not quite certain as to the accuracy of the quantity, but I believe that to be the quantity invoiced, and the freight paid was for 118 tons stated to be delivered, so that more was paid for than actually came in the vessel, or in fact than the vessel could possibly hold.

Can you state any other cases where the same thing has occurred?—I have no knowledge of any other, though I believe them to be very general. I have some cases as to quantity,—the other case was merely as to the mode of payment on the freight. On January 22nd the "Pelham" brought 70 tons by the invoice, and delivered 92 taken on charge. On February 8th the "Prince" brought 58 by the invoice and 79 taken on charge. On February 13th the "Countess" brought 90 tons by invoice and 118 taken on charge.

Do you happen to know whether there exists any practice in the coal trade which would account for the difference of the measures you have stated?—There is a practice that might occasion a difference, but not to that extent.

Examinations.

No. 116.
Mr. T. M. Knight.
March 14, 1836.

Do you know to what extent it would account for it?—I think the difference is about five or seven hundred in the ton. They deliver about twenty-five and a half, or twenty-seven hundred to the ton, at the collieries. Twenty-seven hundred, of a hundred and twelve pounds, at the collieries, this is not by weight, but by measurement, by waggons; they make their calculations by measurement, say so many bushels to the ton, the collieries deliver thirty-two bushels to the ton, according to their weight, and it is taken on charge at the rate of twenty-eight bushels to the ton, by the storekeepers at Holyhead.

Have you been accustomed to the issuing of coals in the King's yards?—Not myself, but I have seen it done by the storekeeper at Jamaica-yard, when I was there. I know the coals were issued at Jamaica-yard at a hundred and twelve pounds to the hundred weight; they receive their coals there as they are brought out by the colliers, with generally a large surplus which is supposed to be for waste.

Are you satisfied that such proportion as you have stated to have existed at Holyhead, between the quantity of coals received and delivered, never could have existed in any one of the King's Navy yards?—It never could; I am satisfied the cause of this great overcharge of the coals in the quantity received being so much larger than the other, arises from the quantity not being really delivered, because I have observed the measures used for delivering the coals into the yard have not been delivered full. In a recent case I have had a person down from London myself; I recommended him to the agent's notice, the agent employed him, and he has turned out the coals in a different manner by giving proper measure.

Are you convinced from what you have observed that fraud must have existed in the issuing of the coals at Holyhead?—It could not have arisen from anything else, or at any rate it must have been an error that I cannot account for. I could not positively say it was fraud, but it looks very obvious in my mind that it was.

Can you in any way account for the deficiency you found in the gross quantity of coals you measured, by connecting it with the statement you have made with respect to the quantity stated to have been received and paid for by the Post-office?—In no other way than that they were not delivered out of the vessel, or disposed of without any account being rendered.

There are other coals in store besides those used for the packets; are there not?—There are.

What are those coals used for then?—For the use of the smiths and the manufacturing in the blacksmiths' shops.

Is there any account of those coals kept?—Yes.

Had you any account given you by the Post-office of the gross amount of coals you would find there?—Yes.

Did you find it correct?—I found a surplus of a ton and a half, or a ton and three quarters, on the smiths' coals; and a deficiency on the others, as my report shows, that I ascertained by measurement.

Were there any sales of coals?—Yes.

At Holyhead?—Yes.

Why did they sell the coals?—They had permission to sell them from the Post-office, or some person in that department; I do not know who; they called them spared stores, and for the convenience of the inhabitants of the place they were permitted to sell the stores out of the dock-yard.

Was any account kept of these spared stores?—Yes, such as it was.

Do you conceive it was a regular and proper account?—By no means.

In what respect did it appear to you to be improper?—Inasmuch as there were things sold which were not accounted for to the Post-office.

How did that appear?—Inasmuch as they were charged in the day-book to the parties who purchased them, and not entered in the returns made to the Post-office; consequently showing a most inaccurate return, and a most imperfect account.

Does that observation apply only to a very recent period, or does it seem to have been the practice for some time back?—For two years back I think I referred.

Did the sale of coals go on to any extent at Holyhead?—I have not known of any considerable quantity being sold; in one case there was £15. in money paid to the engineer for coals, sold by him; but there is no trace in the books whatever of it. Four tons of the quantity charged in this account was for smiths' coals, which the clerk proved to me had been taken out of the Post-office stores. And there was no entry made of that sale, or any account of its having been returned by the resident engineer.

Were they sold to private individuals?—Yes; in this case, where there was this sale of four tons, it was to an innkeeper, by the resident engineer, Mr. Johnson, together with more coals, said to have been taken out of his own vessel.

And sold at the same price at which they were purchased by the Government?—I do not know. In this case of Mr. Johnson, there is no account whatever shown in the books, it was discovered by the bill having accidentally fallen into the hands of Captain Evans. I was present at the time the bill was delivered, and I was instructed by Captain Evans, to examine the books, and see if I could find any trace whatever of it.

Do you mean to say there is no trace whatever of this sale of coals to the innkeeper in the books of the department?—None whatever.

Do you know by whom these sales were authorized?—I do not.

Was it sufficient for any individual to apply to the storekeeper for coals, or was the authority of the agent necessary before the coals were sold?—I presume the authority of the agent was necessary.

Were any other stores besides coals sold?—Yes; iron, oil, and almost all descriptions of stores, also tow, and candles, as the book shows.

Were they sold to tradesmen and merchants, as well as to private individuals, do you know?—I think not, but I have no knowledge of it.

Is there any other coal merchant, besides the Post-office establishment, at Holyhead?—Yes, certainly; more than one; one formerly to a very great extent, as I am informed.

Have you ever heard that the tradesmen of Holyhead have complained of the practice of the dock-yard in selling stores?—Certainly, I am aware they have, and that they considered it a very great hardship.

Did they ever make any formal complaint to the Government of this practice, that you are aware of?—I understood while I was down there that they made a parochial complaint, and that a vestry was held, to establish, if possible, a charge or tax upon the dock-yard, in consequence of the privilege which the dock-yard took of disposing of stores to private individuals.

Did any instance come under your knowledge of the sale of other stores besides coals, in which there was an omission in entering in the accounts of the year, a sale effected in the same manner as what took place in the instance of the innkeeper which you met with?—Certainly.

Will you state any similar instance which existed in any other stores?—On my arrival at Holyhead, I was directed by the Postmaster-General to ascertain whether the circumstances which led to the suspension of the resident engineer and the storekeeper, and the grounds of suspicion against them were to be attributed to fraud or inaccuracy. I applied to Mr. Gardiner, in obedience to my instructions, for information as to the cause of their suspension, when he showed me a number of cases which he had investigated, where stores had been sold, and proof obtained of payment of the money to the resident engineer and storekeeper, and receipts given by them for the amount, and no account rendered to the Post-office of the produce of these sales. By Mr. Gardiner's desire, I carefully examined two of these cases, and, having done so, reported to the Postmaster-General that there could be no doubt of frauds having been committed by the resident engineer and storekeeper. Having ascertained the existence of fraud in these two instances, I considered it unnecessary to report upon any further cases affecting these officers; although I was aware of the existence of other cases of a similar nature from the evidence which I had seen in the hands of the Commissioners.

What description of stores?—It was boiler-plate, coals, canvass, iron, pitch, tar, felt, oakum, brooms, nails, &c.

Do you remember what was the amount of the value of the stores so sold?—In one case it was 8*l.* odd; in another, about 3*l.* I believe—I made an official report to the Post-office at the time, but do not exactly recollect the amount; these bills, with many others of a similar nature, are in the possession of Mr. Gardiner.

Taking this practice of selling the government stores to individuals, in connexion with the inaccurate manner in which the accounts appear to have been kept, are you of opinion that it may have opened a door to very considerable malversation at Holyhead, which it may be difficult now to detect?—I think a very wide door indeed; I think there was a very great possibility of speculation going on to an enormous extent, which it would be impossible to find out.

Do you know whether this system of allowing stores to be sold is permitted in any of his Majesty's navy or victualling yards?—Decidedly not; it is one of the standing orders that they shall not—they are obliged to enter into a bond to prevent any such thing as that.

This rule is strictly observed with respect to a victualling or dock-yard, even in a city or town where it might be very convenient to the inhabitants?—It has never been done in any instance that I am aware of.

Was it ever the practice to sell these stores to individuals belonging to the dock-yard establishment at Holyhead?—Frequently.

Did any instance ever occur to your knowledge of their having been sold to the very parties who had the charge of them?—Most certainly; Mr. Johnson has been in the habit of purchasing old and new iron, and he was the resident engineer, and had the disposal of them. The blacksmith, one of the leading men of the yard, who has the manufacturing of the iron, has been in the habit of purchasing iron in large quantities and selling it, having permission to leave Holyhead for the purpose of selling the very iron which he had thrown out of the smithy.

Had you any reason to know that any of the iron was iron fit for use?—Not of that,—because I never saw it; but on the survey I discovered a very large quantity of perfectly new iron among the old which was to be sold—in the same way, I presume. It was thrown up among the heap of old iron; and out of 100 tons, we picked something like 17 tons and a half in that case, and one ton in another instance: something like 20 tons altogether, I believe. A great part of it quite new, and a very considerable quantity perfectly serviceable. I presume if great care is taken in looking over the old iron which I have left for sale, some 20 tons more of good iron may be found; but not being a mechanic, I was not capable of judging; but some of it was so palpably good, that, although not a blacksmith, I could at once see it had never been used.

In those instances when stores were sold to persons having the charge of them, was a regular account kept of such sales?—There was an account kept, such as it is, but it is by no means an accurate one. That was the Return made to the Post-office.—(*Handing in a book.*)

This book?—Yes.

For instance, in the case of iron, was any accurate account kept there?—Not always.

Do you know of any recent sale of coals?—Yes. I am aware of an entry of four tons of coals being sold to Captain Davis, of the "Gulnare" steam-packet, and which, it appears from a receipt in Mr. Gardiner's possession, was paid to Robert Roberts, the clerk; but on referring to the day-book for the returns made to the Post-office, I find no account whatever of it: although it is explained in the books as sold to Captain Davis, there is no return made of it to the Post-office.

Examinations.

No. 116.
Mr. T. M'Knight.
March 14, 1836.

Is that sold as a private transaction?—As a private sale. They were permitted to purchase coals for their own use. I discovered that accidentally by falling in with that piece of paper, which shows the account of coals sold in the month of October, in which there is a charge of coals sold to Captain Davis of the "Gulnare," although it is not entered upon the books.

What opinion did you form of the superintendence exercised over the artificers and workmen?—The opinion I formed was, that it was exceedingly irregular. There was no manner of check at all—no mustering at all—or anything of the kind. The accounts of the men employed were invariably given in by the engineer or storekeeper, or their leading men, just as they pleased.

Did you discover from the books that any men were charged as working in the yard at the time they were absent?—Certainly. In the case of Douglas, a blacksmith, who purchased old iron: he was allowed by the agent to go to some place—I forget where—to sell it for his own private emolument; he was absent ten days—and he was kept on the books for pay—and he received his pay for all the time on his return.

Was that the only instance?—That is the only instance I am sure of—the only one I can speak positively to.

Is it not the case that public-houses and shops are kept in the town by officers and artisans belonging to the yard?—Yes. The storekeeper himself is a publican.

Do you consider this practice as inconsistent with the proper discipline and credit of the yard?—It is totally derogatory to the welfare of his Majesty's service.

Such a thing never would be permitted in any other branch of the Service—would it?—Certainly not. The mode of payment is the worst that could be established.

Does he pay at his own house?—Yes; his own public-house,—where the men are expected, I have understood, to lay out money. Instead of being paid in the yard by the agent—who is the person having the money, and ought to pay the workmen—the agent gives the money to others to pay them at public-houses in the town.

Are you aware of any per centage having been given or offered to the officers of the yard by the tradesmen at Holyhead?—I have it in testimony from a person who paid a per centage of 5 per cent. to the storekeeper upon some occasion, that he had purchased stores for his Majesty's yard, and the same party has since offered it to the gentleman who was sent to Holyhead to assist me in my duties, and who has since been acting in the situation of storekeeper.

What is the name of that gentleman?—Mr. Hyland. Five per cent. was offered to him by this party on a purchase of stores, which he was directed to make by the agent while I was there.

Of course, Mr. Hyland refused this offer?—Certainly: it was made in my presence.

The offer was made in your presence, was it?—Yes. I, in consequence of this offer, sent for the man two days afterwards, and he signed a declaration to the effect that he did offer it in former cases.

You stated that the watch of the yard is very inadequately conducted?—Yes; there never was any watch at all until latterly, since the Commission was down there. Upon my going down, I strongly recommended that watchmen should be obtained from some of his Majesty's Dock-yards, and put over the premises, for the protection of the property. This recommendation was not acceded to; but directions were given to the agent to appoint men belonging to the place—not, in my opinion, at all proper or fit persons to be there as watchmen, inasmuch as the people are all connected together by relationship, and not at all accustomed to the nature of that duty. I have, since these men have been employed as watchmen, had reason to know that they had neglected their duty very materially; and that they had declared, that if a vessel was to go on shore in the neighbourhood, and be wrecked, they would leave their watch, and go on the shore directly to benefit themselves. Consequently, I think that such persons must be very improper to be there as watchmen over property belonging to his Majesty.

Were any public documents, to your knowledge, destroyed at Holyhead, or taken away by the storekeeper, while you were at Holyhead?—I know that a book, with memorandums of accounts, was taken away, and subsequently returned, after being kept away from the stores a considerable time. The book was returned after Captain Evans and Mr. Gardiner left Holyhead, and is now in my possession.

Was that a private or a public book?—It was a book of public transactions: it was a book of sales belonging to the public stores of the Post-office department: it was a book containing a sale of the public stores.

Do you mean to say that, during the time it was taken away, it was concealed; or that there was any appearance of a desire to conceal this book?—I have every reason to believe, from the appearance of the book itself, and from the acknowledgment of the clerk of the stores, that that book was returned after leaves had been abstracted from it, and of which the book itself bears evidence.

[The book was handed in.]

Is this book, which you have handed in to the Commissioners, that which you allude to?—It is; and I think it bears evidence, if the Commissioners will look over it, they will see that leaves have been taken out: it bears the mark of the ink on the back page, showing that writing had been on the opposite side; whereas the leaf now shown has no writing whatever on it, and could have given no impression. I stated that opinion of mine to the clerk, when I got that book from the clerk, after it was returned to the office; and he admitted there were leaves taken from it; that there were entries of sales which had been made, and which are not there now. I thought it a very strong case, and for that reason I detained the book.

Does the book appear to you to have been pulled to pieces, and new bound?—It does, because it is not so large as the other books in the office of a similar nature; and it was admitted by the clerk of the office to have been pulled to pieces and rebound.

What was the system pursued with regard to the receipt and delivery of oil at Holyhead?—The oil was received in the stores in casks with invoices, and subsequently issued out by gallon measure, which measure contained only three quarts instead of four; and I felt it my duty to represent it to my Lord the Postmaster-General, and to apply for proper measures to be sent down, in order that I might ascertain, more correctly, what should be in the store; and I was directed to use the measures which I found, as the proper test to see what ought to be there—those measures being the ones supposed to be used for receiving the oil as well as issuing it.

Did any person to whom it was delivered ever object to the quantity?—Never; because they were public servants, and they were obliged to take what was given to them.

Was the quality of the oil good which was supplied?—I have understood it was very inferior formerly, and the sweet-oil that I surveyed was exceedingly bad.

Are you aware whether the price paid for it was such that they ought to have had good oil?—Certainly; it was the best price.

Do you know anything of the supply of tallow?—The tallow was not very good when I went to Holyhead, but since I have been down there, the tallow has been sent into store of a very superior quality to what I found on my arrival there.

How was it sent in, and how was it delivered?—It was sent in by invoices and casks, and delivered out in small quantities.

You do not know of the same practice prevailing that prevailed respecting the oil, do you?—No.

Do you know how all the small stores were procured—whether they were procured by contract?—A great many small stores were purchased from the shopkeepers in Holyhead, as in the case of the white yarn, on which the commission of 5 per cent. was allowed; although I have no knowledge of any commission being allowed from the other parties—I found it only in this instance.

Where was the oil procured?—From Liverpool, from a Mr. Simpson.

Was it obtained by contract?—No; it was procured by private purchase, I believe.

Have you made any report to the Postmaster-General with respect to the sale of iron?—I have; I found it necessary. Having instructions from Mr. Gardiner to examine the books to ascertain whether any sales had been made and properly accounted for, I went over the books and discovered that some quantities of iron had been sold by Mr. Johnson, the late resident engineer, at a charge of 14s. per cwt., I think, to a Mr. Provis, belonging to a public establishment adjoining the Post-office department, and accounted for to the Post-office at the small amount of 4s. 6d. per cwt.—making a difference in the account of 6l. odd, which I represented to the Postmaster-General as one of the facts supposed to show the fraud on the part of the resident engineer.

THOS. M'KNIGHT.

No. 117.

16th April, 1836.

Mr. Thomas M'Knight was examined as follows:—

Was there at Holyhead any check on the stores issued for the use of the packets, and what was the nature of the check?—There was an imperfect check kept on stores issued to the packets, the nature of which was pass-books, stated to contain all the supplies made to them.

Were the stores charged against the packets inserted in the pass-books?—Not always.

An account has been laid before the Commissioners, of stores issued to the packets, and not inserted in the pass-books, and in explanation it is stated that stores supplied to packets while under repair were not inserted in the pass-books; do you consider that explanation satisfactory?—I think the explanation very unsatisfactory, knowing as I do, that no kind of stores whatever would be supplied to any vessel or department in his Majesty's naval service under any circumstances, without proper demands being made, and a supply duly authorized, delivery-notes and receipts being given on every occasion for the most trifling issues.

With respect to the stores which were issued while the vessels were under repair, they were issued without any check being kept?—Yes, there was no check kept during the repairs besides the general entry by the storekeeper.

Would that alone account for the difference of the stores that will be found in the pass-books, in your opinion?—I should think it would not altogether, for I believe in many other cases they were not entered.

One of the engineers of the packets at Holyhead represents that the stores have been of an inferior quality, can you give any explanation upon that subject?—The tallow, I am aware, was of very inferior quality when I first went down, subsequently it was supplied of a better quality.

Did the tradesmen at Liverpool, who supplied part of the stores, send certificates to show that the stores were not of inferior quality?—I am not aware of any certificates having been sent to Holyhead, by the tradesmen, from Liverpool. I know that a Mr. Simpson, who supplied stores to that department came there for the purpose of getting samples, which after some hesitation on the part of Captain Bevis, the agent, were given to him, I believe, but then they formed no part of the stores that have been complained of, they were samples of stores supplied subsequently to the complaints made by the captains and engineers.

Was there any check on the stores that were issued to the colliers belonging to the Post-office?—There was no other check than the account kept by the storekeeper; the masters of

the vessels were not required to give receipts for the stores that were sent on board the colliers, of course there was no check but what the storekeeper had himself.

What more efficient check should you have suggested for the stores that were issued to the colliers?—In the service I have been accustomed to, we always adopt demands approved by the principal persons of the department; and a supply-note issued or given with the quantity of stores that were sent out, and proper receipts being taken by the parties who received the things for use on board any particular vessel—the one with the other forms a check on the transaction.

You have stated that the sale of spare stores gave a facility to fraud and peculation?—Yes, there is no question of that in a public department.

Do you believe that any such has taken place?—I do most assuredly, from the statement that I have seen in the documents produced for my inspection, the day-book of the party who got the stores from the dock-yard.

Do you think they were sold to individuals at too low a price?—In one case I found the stores were sold at a much higher price than Mr. Johnson, the engineer, had paid for them. I am not exactly competent to judge whether the price was correct or not.

It is stated by Mr. Goddard that his reason for selling a large quantity of iron to one of the blacksmiths was, because he obtained a higher price for it than he could have done from any other person;—do you know whether that was the case?—I am not aware of that sale of iron; but I have no doubt that if iron was allowed to be purchased by workmen belonging to the establishment, who had opportunity of assorting and setting aside that iron for sale, it might very easily be imagined it would sell for a higher price to those individuals than if sold by public-auction, as they must be aware of the description of iron they had already selected. By the survey at Holyhead, I discovered a considerable quantity of new iron among the old iron set apart for sale; and if the former selection was made in the same way, there is no doubt that a higher price might be obtained if the iron was purchased by persons belonging to the establishment than if carefully picked out for public competition.

Was there any complaint on the part of the inhabitants of the town on account of the storekeeper and engineers selling the stores?—Yes. I represented, in my former Report, that it was a parochial complaint; that Mr. Goddard gave directions to discontinue the sales in consequence; there is a letter in Mr. Goddard's hand-writing to that effect.

Were the sales discontinued in consequence?—Certainly not.

Does Mr. Goddard appear to have been aware that the sales were going on after the discontinuance was ordered?—He must have been, from the circumstance of the official documents from the office going through his hands in the quarterly Returns to the Post-office.

It is stated by Mr. Goddard that he never ordered a greater quantity of boiler-plate than was considered necessary for the particular purpose for which it was obtained? What quantity of boiler-plate did you find at Holyhead?—I do not exactly recollect the quantity of boiler-plate; my Report of Survey will show that; but the quantity of iron I found in the establishment was upwards of 100 tons of new iron: among that quantity there were some 40 or 50 tons of new iron, used in the manufacturing of boilers—such as boiler-plate, angle-iron, and rivet-iron, all of which are used in the manufacture of boilers.

Have the commanders or engineers complained of the quality of the tallow supplied to the vessels of late years?—Decidedly: even within the period I was there, complaint was made of the oil and tallow; a part of the oil that I found on the survey was even rejected in my presence.

You have stated that there was no muster of the workmen in the dock-yard;—who kept an account of the time of their labour?—The time was kept by the different foremen of their own particular parties, and reported by them to the storekeeper and engineer, from which report the men were paid.

Who paid the workmen?—The storekeeper paid many of them, those particularly in his department, and the others were paid by the foremen of the different gangs, who themselves had given the account of the number of men employed, and the time they were employed, to the storekeeper and engineer; those men were all paid at public-houses.

Then there was, in fact, no check over their attendance?—None whatever, it was impossible there could be a check under those circumstances; if they were exceedingly honest men, the account might be true, but it must be, as it is, questionable.

Mr. Goddard states that the resident engineer was not in the habit of purchasing stores, nor any other individual of the establishment?—The fact of stores being sold to the resident engineer and other individuals of the establishment must have escaped Mr. Goddard's memory, because it is evident from the books, as they show in many instances that it did actually take place.

You stated that the resident engineer frequently sold smiths' coals; was any account or check kept of the quantity delivered out of store?—I found none whatever in the department.

Have you reason to believe there was any?—I am satisfied there was none.

Have you seen Mr. Goddard's letter, accounting for the deficiency of coals, and saying that it arose from an error in the admeasurement?—I have.

Do you think the answer satisfactory?—By no means; one part of Mr. Goddard's letter which I looked over stated "it is manifest the coals ought to be measured out by the same measure that they were received by:"—that is exactly the manner in which I measured the coals; I used the identical measure that the coals were measured into the yard by, to ascertain their quantity, upon which I founded my report, therefore I presume that I acted perfectly in accordance with Mr. Goddard's own opinion.

You found by that very measurement there was a deficiency?—I did ; I found a deficiency of 179 tons, varying from my original calculation by figures only three tons.

Mr. Goddard appears to suppose you used some other measure?—By the tenor of his letter he assumes that I made my report on cubic calculation, when actually I made it by measuring with the very measure they used themselves ; the calculation upon which my report of survey was founded tended to convince me that I was right ; my final report was not founded on calculation, but by positive measurement.

Mr. Goddard states that no permission was granted to the officers or others of the establishment to purchase stores out of the dock-yard, and to dispose of them for their private emolument ; can you state whether such permission was granted or not?—Most certainly it was.

How do you know that such permission was granted?—I am aware that permission was given to the engineer to perform work in the dock-yard which he sold for his own emolument ; that was given by Mr. Goddard, by a letter in his own hand-writing.

In what state of protection did you find the timber at Holyhead belonging to the dock-yard?—Almost the entire quantity of it was outside the gates, without any protection whatever.

Did it remain outside even after it was sawn up into plank?—In very large quantities.

So that it might have been easily carried away?—There was nothing to prevent its being carried away.

Mr. Goddard states that the resident engineer has, with his concurrence, borrowed and lent smiths' coal, but that those were cases of loan and not of sale ; do you know whether they were cases of sale or of loan?—I am quite satisfied that the resident engineer did sell smiths' coals ; I saw the bills of parcels and the receipts. Captain Evans showed me a receipt for the money being paid by Mr. Spencer to Mr. Johnson for smiths' coals ; therefore I am satisfied that they were positively sold.

Did he account to the Post-office for those sales?—No, not at all ; there was no book in which they were accounted for, nor could any person tell when they were even returned.

APPENDIX (F.) (Liverpool.)

No. 1.

Number of Persons employed, Pay and Emoluments of each, &c., on the Liverpool Station.

No. 1.

RETURN of the Number of Persons employed on the Liverpool Station, the Amount of Pay and Emoluments of each, and a Description of the Duties which they perform.

Persons.	Number of each.	Pay.	Emoluments.	Duties.
Agent . . .	1	£500 per annum.	None	Entire superintendence of the whole packet establishment, receives all monies, pays all claims, issues all orders, settles all complaints, makes all reports, controls expenditure of stores, regulates discipline, inspects the packets, transmits daily, weekly, monthly, and quarterly accounts to the Postmaster-General, carries on all the official correspondence, &c.
Clerk . . .	1	£80 per annum .	None	Assists in keeping and making out accounts, copies correspondence, casts tradesmen's bills, attends every day, Sundays included, to book passengers at the office, to answer all inquiries, &c.; acts for the agent when absent, &c.
Storekeeper . .	1	£1 per week . .	None	Keeps store account, issues oil, tallow, and wipings for packet machinery, keeps inventories of packet equipments, attends on board every evening, Sundays included, at the departure of the packet, to book latest passengers, and arrange their berthing, assists daily in the office, Sundays included, to book passengers, &c.
Plyer . . .	1	£1 per week . .	None	Attends office daily as messenger, superintends embarkation of all horses and carriages, collects monthly tradesmen's bills, plies at the hotels for passengers, distributes advertisements, &c.
Commanders of Packets.	4	£400 per ann. each	A steward's fee of 2s. 6d. each for cabin passengers, and 1s. 3d. for each child of ditto, was allowed to the commanders till the 15th January, 1834, when it was reduced to 2s. for each cabin passenger, and 1s. for each child of ditto. They are also allowed a steward's fee of 2s. 6d. for each City of Dublin Company proprietor, who is otherwise conveyed free of charge. From these fees the commanders defray the wages of a steward, under-steward, cabin-boy, and stewardess, with other servants, if necessary; the commanders are also liable, from these fees, to replace all losses of plate, linen, earthenware, or glass, to pay for washing cabin bedding, and to be accountable for all passage-money passing through the hands of the stewards. Half the steward's fees likewise are deducted, and paid to an acting commander, whenever the regular commander is absent from sickness, or upon leave.	They command and navigate the packets, demand stores for the same, and do all other duties usually performed by captains of ships, &c.
Masters . . .	4	£1. 10s. per week and provisions, each.	Receive half the steward's fees from the commanders of packets, when the command devolves on them, owing to the said commander's being absent from sickness, or upon leave.	Act as second in command in the packets; have sole charge when no commander is on board; and during one watch, when at sea, perform all other duties usually attached to chief mates of ships, &c.
Mates and Pilots.	4	£1. 5s. per week and provisions, each.	None	Act as third in command on board the packets, have charge of a watch alternately with the master, pilot the packets in and out of port, and do all other duties usually performed by second mates of ships, &c.

REPORT of the Number of Persons employed on the Liverpool Station, &c.—(continued).

No. 1.

Number of Persons employed, &c., on the Liverpool Station.

Persons.	Number of each.	Pay.	Employments.	Duties.
Carpenters . .	4	£1 per week and provisions, each.	None	Act as ship carpenters on board the packets, effect small repairs, &c.
Cooks	4	12s. 6d. per week and provisions, each.	None	Cook for the crew and passengers, &c.
Seamen	In summer, 24, in winter 32	12s. 6d. per week and provisions, each.	None	Do all the duties in the packets usually performed by able seamen on board ships, &c.
Ordinary Seamen	8	7s. 6d. per week and provisions, each.	None	The same as able seamen, except taking the helm and heaving the lead.
Engineers . .	4	Per week, each, 1st year . £2 15 2d & 3d year 3 0 After 3d year 3 3	None	To work packet engines, keep the boilers and engine in order, &c.
Second Engineers.	4	£1. 15s. per week, each.	None	Relieve engineer in working packet engines, and assist in all other duties of the engine-room, &c.
Firemen . . .	16	17s. 6d. per week and provisions, each.	None	To light and keep up the fires, clean the engines and boilers, &c., on board the packets.
Coal Trimmers .	4	17s. 6d. per week and provisions, each.	None	To level the coals in the boxes, and shovel them forward as required for use of the firemen, to clean out coal-boxes, &c.
Master of Tender.	1	£2 per week.	Receives half steward's fees when occasionally placed in command of a packet, owing to the regular commander being absent, from sickness or upon leave.	Commands "Richmond" tender, boards mercantile vessels arriving in the Mersey to collect ship-letters, conveys mails, passengers, horses and carriages, to and from the packets, at particular times of tide.
Mate	1	£1. 10s. per week.	Receives half steward's fees when occasionally placed in command of a packet, owing to the regular commander being absent, from sickness or upon leave.	Acts as second in command on board the "Richmond," and takes entire charge of her in the absence of the master, &c.
Carpenter . . .	1	£1. 2s. 6d. per week.	None	Acts as ship-carpenter on board the "Richmond" tender, &c.
Seamen	5	£1 per week, each.	None	Act as seamen on board tender, and man boats in the river for boarding vessels to collect ship-letters, and to convey mails, &c., from or to the packets, at particular times of tide, &c.
Ordinary Seaman.	1	15s. per week.	None	Same as seamen on board tender, except taking the helm or heaving the lead.
Engineer	1	£2. 5s. per week.	None	Works the tender's engines, keeps the same in order, &c.
Firemen	2	18s. per week, each.	None	To light and keep up fires in the tender, clean engines and boiler, &c.
Booking Clerk in Dublin.	1	£80 per annum.	None	To attend office daily and book the passengers.
Plyers	2	One at £1 per week, one at 15s. per week.	None	One attends office to take charge of luggage, answer questions, go messages, &c.; the other plies at the hotels for passengers, circulates advertisements, &c.
Storekeeper at Kingstown.	1	£1. 5s. per week.	None	Receives and issues coals to the Liverpool and Holyhead packets, attends daily and nightly their arrivals and departures, makes signals to them in the offing, assists passengers, carriages, horses, and luggage in landing or embarking, &c.

Draught of Water
Tonnage, Power,
&c., of the Post-
office Steam-
Packets.

A RETURN showing the Draught of Water of each of the Post-office Steam-Packets when with their full Complement of Fuel and Passengers, their Tonnage, Power, Length, Breadth of Beam, and Depth; Size of Cylinder and Air Pump, Length of Stroke of each; Surface of the Boiler exposed to the Fire; Cubic Contents of the Boiler; Pressure on the Safety Valves when at full work, and if above Low Pressure, stating the authority under which the Valves were loaded; Alterations made in the Slides in consequence of using more highly elastic Steam; Diameter of the Wheels; Number of Floats and Size; Inclination of Paddle-Arms to the centre of the Shaft; greatest Number of Revolutions of the Wheel when loaded; proportion of the Wheel immersed when loaded.

QUERIES Respecting Post-office Packets, Liverpool.	REPLIES OF COMMANDERS.			
	Etna.	Comet.	Dolphin.	Thetis.
1. Draught of Water, with full Complement of Fuel and Passengers.	11 feet 1 inch.	11 ft. forward. 11 ft. 2 ins. aft.	10 feet 1 inch forward. 10 feet 7 inches aft.	9 feet 9 in. forward. 10 feet 6 inches aft.
2. Tonnage.	301 tons.	300 tons.	328 $\frac{3}{4}$ tons.	350 tons.
3. Power.	152 horses.	160 horses.	166 horses.	160 horses.
4. Length.	126 feet 8 inches.	125 feet.	Between perpendiculars 137 feet, on deck 145 feet.	145 feet 7 inches.
5. Breadth of Beam.	22 feet 6 inches.	22 feet 6 inches.	22 feet 8 inches; over all 42 feet 2 inches.	22 feet 7 inches.
6. Depth.	14 feet 5 inches.	14 feet.	14 feet 9 inches.	14 feet 6 inches.
7. Size of Cylinder.	48 inches.	48 inches.	48 $\frac{1}{2}$ inches.	48 $\frac{1}{2}$ inches.
8. Size of Air Pump.	27 inches.	28 $\frac{1}{2}$ inches.	26 $\frac{1}{2}$ inches.	25 inches.
9. Length of Stroke of each.	Cylinder 51 inches. Air pump 29 $\frac{1}{2}$ in.	Cylinder 54 in. Air pump 2 feet 3 inches.	Cylinder 4 feet 6 inches. Air pump 2 feet 3 in.	Cylinder 4 feet 6 in. Air pump 2 ft. 3 in.
10. Surface of Boiler exposed to the Fire.	2,296 feet.	2,336 feet.	2,169 feet.	2,127 feet 6 inches superficial measure.
11. Cubic contents of the Boiler.	2,482 feet.	3,187 feet.	2,842 cubic feet.	3,037 feet.
12. Pressure on Safety Valves when at full work.	6 lbs. to square inch.	5 lbs.	Rather less than 5 lbs. on the square inch.	4 $\frac{1}{2}$ lbs., or nearly 5 lbs.
13. If above Low Pressure, the authority under which the Valves were loaded.	Not above low pressure.	Not above low pressure.	Increased from 3 $\frac{1}{2}$ lbs. by order of Mr. Richardson, then agent, in consequence of trials on other steamers.	Not above low pressure.
14. Alterations made in Slides in consequence of using more highly elastic Steam.	No alteration since boilers were put on board; but the valves were then overlapped $\frac{1}{4}$ of an inch.	None.	Half an inch of brass added to steam slide, so as to shut off steam sooner.	None.
15. Diameter of the Wheels.	18 feet 9 inches.	18 feet.	18 feet 10 inches.	19 feet 6 inches to outer edge of float.
16. Number of Floats.	16.	16.	16.	16 in each wheel.
17. Size of the Floats.	7 feet 10 inches by 24 inches.	8 feet by 21 in.	8 feet 4 inches long, 2 feet broad, 2 $\frac{1}{2}$ inches thick.	8 feet long by 21 inches.
18. Inclination of Paddle-Arms to centre of the Shaft.	6 inches from inner to outer end.	3 inches.	Angled 6 inches.	3 inches.
19. Greatest number of Revolutions of the Wheel when loaded.	23 $\frac{1}{2}$.	23.	24.	Nearly 23.
20. Proportion of Wheel immersed when loaded.	2 feet 6 inches.	2 feet 7 inches.	About $\frac{1}{4}$ th of its diameter. Top edge of float 8 inches below surface of water.	2 feet 3 inches.

F. FREELING,
Secretary.

No. 9.

Captain *Edward Chappell*, Agent at Liverpool,

Liverpool, February 3d, 1836.

Was appointed agent in August last, on Mr. Richardson's resignation.

Captain Chappell cannot speak with certainty as to the manner in which Mr. Richardson conducted the establishment.

Mr. Richardson has, since Captain Chappell's appointment, removed the account books in which both the public and private transactions of Mr. Richardson were entered, and Captain Chappell has not been able to get them from him.

On Captain Chappell's appointment he had no code of instructions supplied to him, as he would have received had he been appointed to a similar station under the Admiralty.

Neither the commanders nor any of the officers of the Post-office packets give receipts for stores supplied to their vessels. There are no books kept on board the Post-office packets, specifying the quantity of stores on board, with the exception of full inventories of the cabin equipments, which are in the charge of the captain, and he is made responsible for any deficiency.

Officers of Post-office packets are not made responsible, as in the navy, for the ship's stores, and should any deficiency be discovered, they are not made to pay for it: but as there are no surveys of remains taken on board the packets, there never has been any material deficiency discovered.

There are four packets under Captain Chappell, besides the "Richmond" tender, viz:—

The "Dolphin"	Smithett.
"Etna"	Emerson.
"Comet"	Phillips.
"Thetis"	Townley.

The pay of the captains of the four packets is £400 per annum, and an allowance of 2s. upon each adult, and 1s. upon each child or servant.

The mates are paid £1. 10s. a-week, and an allowance of 2 lbs. of beef, and 1 lb. of bread per diem.

The engineers are paid by a graduated scale, according to length of service, varying from £2. 15s. a-week to £3. 3s.

The firemen are paid £1. 1s. a-week, without provision; the crew are paid 19s. a-week: and ordinary 14s. with an allowance of provisions similar to the mates.

The coal is supplied, by contract, on board the packets at 9s. per ton. The provisions are also obtained by contract. The other stores are purchased by Captain Chappell, in the most advantageous manner.

The "Richmond" tender has a complement of one captain, one engineer, two firemen, four able, one ordinary, one mate, and one carpenter.

Captain	£2	0	0	a-week.
Mate	1	10	0	"
Able	1	0	0	"
Ordinary	0	15	0	"
Carpenter	1	2	6	"
Engineer	2	5	0	"
Firemen	0	18	0	"

The packets on the Liverpool station have a branch pipe attached to the force pump. In the "Comet" and "Dolphin" this pump is attached to and worked by the engine. They have also fire buckets on board in the event of fire.

All the packets on the Liverpool station work with steam on the expansive principle.

Captain Chappell is at present establishing a new store book on board the packets showing the quantity of stores supplied to them.

(Signed) E. CHAPPELL.

I have read over that part of Captain Chappell's statement relative to the stores, and perfectly agree with him.

(Signed) JOHN EMERSON, Commander.

No. 10.

Captain *John Emerson*, of the "Etna" steamer on the Liverpool station,

Dublin, October 22d, 1835.

Is master in the royal navy. Has been ten years and a half in command of the "Etna" on the Liverpool station. The "Etna" is 300 tons burthen, and formerly had two engines of 70-horse power each. In the month of December 1832, the cylinders were increased from 40 to 48 inches in diameter, increasing the power of each engine from 70 to 76-horse power.

The boilers of the "Etna" have never been increased, as the former ones produced steam sufficient to meet the increased size of the cylinders, and therefore increasing the power did not increase the consumption of coal, but, on the contrary, diminished it very considerably by enabling the "Etna" to perform the voyage in a shorter period. This saving of coal Captain Emerson estimates at seven tons the voyage to and from Liverpool and Dublin, as he formerly took in 35 tons, but latterly only 28 tons to perform the same work.

No. 10.

Statement of
Captain Emerson,
October 22, 1835.

No. 10.

Statement of
Captain Emerson,
October 22, 1835.

Captain Emerson also states that part of this saving of fuel is to be attributed to an improvement in the construction of the boilers without increasing their size, but even diminishing it. He has never ascertained the exact weight of coal consumed.

Statement of
Captain Townley,
12th Nov. 1835.

No. 11.

Captain Townley, "Thetis," Liverpool Packet.

Kingstown, Nov. 12th, 1835.

The packets on the Liverpool station when sent to Holyhead for repairs are obliged to lay aground at low water, which occasions a great strain upon the vessel, and the boilers can never be put in with that accuracy which they would if the vessels had water sufficient to keep them afloat. At Liverpool, steamers have every facility for getting their repairs executed,—having a dry dock of sufficient capacity to admit a steamer of 50 feet breadth. There are also the best description of wet docks, which enable them to lie afloat, and have their engines adjusted with a degree of precision which is of essential importance to steamers, but can never be attained when the packets are allowed to ground at low water. In April last the "Thetis" was obliged to have her boilers and engines put in at Liverpool, they having been taken out in consequence of a fire which occurred on board the vessel. Engineers from Bolton and Watts' manufactory were employed. When they commenced putting in the engines, the "Thetis" was stationed at Mr. Laird's establishment on the Cheshire coast, where there happened not to be sufficient depth of water to keep the vessel afloat at ebb tide. She consequently grounded in the mud, and the engineers declined setting the engines, as they said they could not possibly work with any degree of accuracy, unless the vessel was kept afloat while they were at work. The "Thetis" was in consequence of this removed to the wet dock at Liverpool before her engines were put in.

The "Thetis" was repaired at Liverpool, from her being in so disabled a state that she could not be taken to Holyhead. The repairs she received were very extensive. The boilers were taken out and overhauled, new cylinders and slide valves put, the shafts raised, and the diameter of the wheels increased; at the same time the vessel was lengthened 15 feet. As many as 200 men were at work at the same time, and the repairs were conducted with great expedition, and in the most satisfactory manner. The Liverpool packets leave Kingstown harbour at half-past five, Dublin time. The first delivery in Liverpool is not before half-past nine, A. M. The Manchester mail leaves at 10 by the railway train.

With the class of vessels now upon the Liverpool station, Captain Townley feels assured that they might start from Kingstown an hour later than they do at present, without running any risk of being too late for the Manchester mail. The average passage from Kingstown to Liverpool is 13 hours, and 15 hours would be sufficient time to enable them to convey the mails with certainty. The average passage from Liverpool to Kingstown is about an hour longer than from Kingstown to Liverpool.

Statement of
Captain Smithett.

No. 12.

Captain William Smithett, Commander of the "Dolphin,"

Entered the Post-office service in 1812, in the "Lord Duncan" commanded by Captain Hamilton. Was transferred to the Dovor station in 1814, and was appointed to the "Dolphin" steamer in 1821. Captain Smithett considers the emoluments he receives beyond his pay of £400 a-year merely as compensation for the expense the commanders are put to in keeping up cabin furniture, and payment of stewards' wages, &c. These emoluments were allowed by a private agreement with Mr. Freeling, and Captain Smithett does not consider that they would be entitled to compensation if the emoluments were withdrawn.

(Signed)

WILLIAM SMITHETT.

No. 13.

Statement of
Mr. John White.

No. 13.

John White, Storekeeper.

Liverpool.

On Captain Chappell's appointment as agent at Liverpool, White became storekeeper, having been formerly a pleyer. There were two pleyers employed for the purpose of waiting for the arrival of the different coaches, and to solicit the passengers to go by the mail-boats in preference to the private vessels. In the last 12 months White has been principally employed by the late agent, Mr. Richardson, on his own private business. Mr. Richardson had considerable business as a shipping agent, and at one time had two steamers of his own. All Mr. Richardson's private and public accounts were kept in the same office, and great part of the Post-office accounts were mixed up in the same books with his own private transactions. White received no emoluments from Mr. Richardson, although employed on his private business, but was paid entirely by the Post-office.

Since Captain Chappell's appointment, the manner of keeping the store accounts and superintending the receipts and deliveries has been entirely changed. No stores can now be delivered out excepting in presence of the storekeeper, on a demand being presented to him after

it has been approved of and signed by the agent. Formerly stores were delivered out by either of the plyers, by the storekeeper, the agent, Mr. Richardson, or his son.

The stores are now entirely in the charge of White, and he is held responsible by the agent for them.

(Signed) JOHN WHITE.

No. 13.

Statement of Mr. John White.

No. 14.

Captain *Emerson*, Commander of H. M. P. "Etna," and Captain *Philipps*, Commander of H. M. P. "Comet."

Liverpool, 14th January 1836.

The commanders on the Liverpool station receive, in accordance with a private agreement entered into with Mr. Freeling, an allowance for each passenger they carry. This allowance was originally 2s. 6d. but was reduced about two years ago to 2s.

At one time, when the opposition on this station was great, Mr. Freeling would not allow them to have any deductions for the stewards and other contingencies from the passage-money paid in the office, but left it to the stewards to collect it as they best could from the passengers. The commanders, however, were then held responsible, as they are now, for keeping up the cabin furniture and paying all the wages of the stewards, &c., which amounted to a considerable sum.

The returns of the passage-money received will show the gross amount the captains derived from the passengers, and they can give, if necessary, the amount they paid in wages; but the other outgoings for washing, crockery, &c., they have never kept any regular account of.

These emoluments have been very variable, and sometimes the commanders have been subject to loss, and frequently, when a vessel is under repair for any time, they barely cover the expenses of the year. The commanders have always considered these emoluments as entirely a matter of private agreement with Mr. Freeling, and he has exercised his discretion in putting them upon any footing he thought proper. They were given merely as a compensation for the responsibility and expense the commanders have been put to, and if they were entirely taken away they do not consider that they would have any claim for remuneration. The commanders have never supposed that the receipt of these emoluments could affect their claim to half pay, nor would they have agreed to take them had it been so.

The allowances the commanders receive were, at their particular request and with Mr. Freeling's sanction, collected by the agent at the office, or charged with the fares when received on board.

(Signed) JOHN EMERSON, Commander H. M. P. "Etna."
JOHN P. PHILIPPS, H. M. P. "Comet."

The "Etna" and "Comet" are not so fast as the two other packets on this station, in consequence of being shorter and having less power and greater draught of water. Some of the Scotch boats beat these two packets.

Captain Philipps and Captain Emerson are decidedly of opinion that unless these two vessels are replaced by others of a superior class, the Post-office revenue must suffer greatly by any private company placing packets on the line, which they have reason to expect is now contemplated. The average passage of the "Etna" and "Comet" is 14 hours 20 minutes. With superior vessels the passage would not average 12 hours.

(Signed) JOHN EMERSON, Commander H. M. P. "Etna."
JOHN P. PHILIPPS, Commander H. M. P. "Comet."

No. 15.

No. 15.

Statement of Messrs. Stewart and Dorrington, 13th Jan. 1836.

Wm. Stewart, Steward of the "Dolphin," and *Wm. Abdy Dorrington*, Steward of the "Thetis."

Liverpool, January 13th, 1836.

The steward is appointed by the commander. He has an under-steward, female-steward, and cabin boy to assist him; they are all paid their salaries by the commanders. The steward receives £40 a-year, the under-steward £26 a-year, the stewardess £26, and the boy £13. The steward derives some emoluments from provisions supplied to the passengers on board. These emoluments are very uncertain, and there are considerable deductions from them, as the steward is obliged by the commanders to keep up the stock of crockery, plate, glass, linen, &c. They also pay for the washing of the linen.

The steward receives and delivers the mail and collects and keeps an account of the passage-money, for which he is held accountable by the commanders.

No. 16.

Mr. G. H. Freeling's Arrangement with the City of Dublin Company.

General Post-office, 12th December 1835.

SIR,—I have the honour to enclose, for the information of the Commissioners of Post-office Inquiry, a statement showing the particulars of the arrangement with the City of Dublin

No. 16.

Mr. G. H. Freeling's
Arrangement with
the City of Dublin
Company.

Steam Company, under which the shareholders of that Company are conveyed by His Majesty's packets, free of charge.

I beg to add that I am not aware the Post-office has any reason to complain of the proceedings of the Company under this arrangement.

I have the honour to be, Sir,

Your obedient humble servant,

G. H. FREELING.

J. R. Gardiner, Esq.

There was not any precise agreement between the Post-office and the City of Dublin Company, but an arrangement or understanding was approved by the Postmaster-General in 1826, with the view of preventing hostile competition between a public establishment and private individuals, and of defining the objects of each.

The Company were not to lay themselves out for cabin-passengers, but to consider their principal business to consist in the conveyance of merchandize, cattle, and deck-passengers. The Post-office was to confine itself to the mails and cabin-passengers.

The Company could not undertake to destroy the whole of the cabin accommodation, because their vessels were occasionally sent to other ports than Dublin; they did, however, dismantle the cabins of several.

One difficulty presented itself, occasioned by the right possessed by the shareholders in the Company to free passages by their own vessels, to obviate which the Postmaster-General consented to grant free passages by the packets, on the production of the necessary vouchers that the parties were *bonâ fide* shareholders.

The Postmaster-General adopted this course without hesitation, because it could not be any possible loss to the Revenue, as the parties would not go by the packets and pay their passage-money when they could pass free by the Company's vessels; that the concession being *personal*, the Revenue would derive the advantage of the friends and families of the shareholders, who would pay, and who would otherwise have gone also by the private vessels.

That it prevented injurious competition without any expense whatever to the Revenue, and that the Postmaster-General was desirous so to shape his arrangements as to render them as little injurious as possible to private trade, consistently with a due regard for the accommodation of the public and the interests of the Revenue; and, lastly, because it ensured a good feeling and the co-operation of this Company, in case of emergency, for the advantage of the public service,—the Company having expressed their willingness to supply a vessel for the conveyance of the mail when no packet was in readiness, at the nominal sum of £5.

No. 17.

Letter from
C. W. Williams, Esq.
to J. R. Gardiner,
Esq., 12th Jan. 1836.

No. 17.

City of Dublin Steam-Packet Company.

Liverpool, 12th January 1836.

SIR,—I have the honour to receive your letter of this date, requesting to know, for the information of the Commissioners of Post-office Inquiry, whether, "in case the Government should think it advisable to have the mails conveyed between Liverpool and Dublin *by contract*, this Company would be disposed to contract for the service." As your letter makes other inquiries with reference to the same point, I beg generally to answer that, if Government desire to make the change to which you refer, this Company will be willing to undertake the service, and the more so, as, having heard it stated that such has been the desire of the Commissioners of Post-office Inquiry and of Government, and that other private companies had made tenders for the same, this Company had already deemed it necessary to direct additional vessels, adequate to the mail service, to be built, for the purpose of placing them in a position equally favourable with any other steam-packet company, for the conveyance of passengers, which might be disposed to make a tender for the mail service.

As to the mails being carried with equal certainty and dispatch, there can be no doubt that, if equally efficient vessels and commanders be placed under the orders of the Post-office agents, the service would be performed with equal satisfaction to the public and the Post-office.

Hitherto, certainly, this Company were not in a position, without great inconvenience to their ordinary business, to place a sufficiency of competent vessels at the service of the Post-office; that impediment is, however, in course of removal by the construction of six additional steam-vessels, two of 200-horse power each, and four of 250-horse power each, now building; two of which latter are to be more peculiarly appropriated for the conveyance of passengers; and this in addition to the Company's fleet of 12 sea-going vessels, more than one-half of which are adequate to the conveyance of the mail, when going without cargo and in packet trim.

This Company are therefore in a better position for securing a certain and expeditious conveyance of the mail between Liverpool and Dublin than any other in existence, from the greater number of first-class steam-vessels which they now have on the station.

As to the inquiry whether this Company would be disposed to purchase any of the four packets at present employed, I have no doubt they would be willing to purchase, on the terms of a valuation by competent persons, the two which are considered best adapted to this particular service, the "Dolphin" and the "Thetis;" and I should recommend it as an advisable measure, so that as little change as possible should be made in the vessels actually performing the service, and with the view of preventing any feeling of apprehension in the public mind.

With respect to your inquiry as to the *class of vessels* this Company would employ on the service, I need only observe that they shall be of the first class in power and efficiency, and such as shall be approved of by the Government.

It is only necessary to add that this Company would undertake to place daily at Liverpool and at Dublin (Kingstown), and at whatever hour the Post-office agent should determine, a competent and approved vessel, under his orders, to take the mail on board and proceed to sea when desired.

As to the vessels carrying the mails being under the command of naval officers, there can be no difficulty on that head, the appointment of such commanders being necessarily left to this Company.

With reference to the terms or fares on which passengers could be conveyed, and to avoid any idea of monopoly or abuse, this Company will have no objection to submit the rates for cabin passengers to the approbation of the Lords of the Treasury, or the Post-office, with the stipulation that they should not be required to *exceed* a fixed sum, it being the interest of this Company that the rates should be on the lowest remunerative scale to prevent any complaint on the part of the public. I should even now suggest, as the probable maximum rate, 12s. 6d., which is less than one-half the Post-office rate, when the mail packets were first adopted.

In reply to another inquiry of yours, if the vessels would be exclusively devoted to the carriage of the mails and passengers, I say they should, decidedly, considering that as a *sine qua non* for many reasons which may not now be stated, conceiving that the carriage of merchandize, or their being applied to the purposes of trade and cargoes, is wholly incompatible while engaged in the service of carrying the mails. I would observe, however, that the carriage of horses and carriages is considered as part of the passengers' service.

As to any minor regulation which the General Post-office might consider necessary, there can be no objection to the adoption of such.

Having replied to your several inquiries, I beg to add that this Company would be willing to conform to such regulations as the Lords of the Treasury should require for the conveyance of *detachments* of regiments, and, as I believe, now are adopted by the present mail-packets: this Company, however, not considering themselves bound to carry *regiments*, that being a distinct service, and for which, I believe, some contract is still existing with the War-office.

I may here observe, this Company would be willing to carry the mail-bags to and from *Belfast* and *Liverpool*, and by which a considerable increase of revenue would arise to the Post-office.

Again: any additional vessels that might be required for *expresses* or other service (besides the one daily packet on each side the Channel) should be considered as a separate affair, and to be paid for as might be agreed on.

Finally: On the subject of remuneration for the above-named services, I am disposed to submit that question, on the part of the Company, to the decision of the Lords of the Treasury, taking the liberty to say that, in my opinion, this Company is fairly entitled to priority in the favourable consideration of their Lordships, from the circumstance of their having been sufferers to a great extent by the introduction of Government vessels, and which I can prove reduced the amount of receipts, from *cabin passengers alone*, in 1826, from £12,000 to £2,000 a-year.

I may also be permitted to add that, since 1826, this Company have, by the ceasing to oppose the Government packets, added to the Post-office revenue at least £10,000 a-year, and which has been thus secured by the continuance of that friendly co-operation and mutual good understanding which has prevailed for so many years.

I have the honour to be, &c.

James R. Gardiner, Esq.

CHARLES W. WILLIAMS.

No. 18.

City of Dublin Steam-Packet Company,
Office 27, Water-street, Liverpool, 13th Jan. 1836.

SIR,—With the view of furthering the objects of Government and the Commissioners of Post-office Inquiry, and to enable them to appreciate the amount of saving which would follow a change of system, I would propose, for the purpose of avoiding the great expenditure on the present Mail-packet Establishment, (which so far exceeds its receipts, and the object being to save the expense of maintaining that establishment in Liverpool,) that this Company would undertake to work the present Post-office vessels, and perform the identical service now performed by them, and in an equally efficient manner, without any expense whatever to the Post-office beyond that of their agents in Liverpool and Dublin.

As, however, two of the present mailpackets are of inferior power and efficiency, and it would be necessary to supply their places with others, so as to be equal to any rival vessels that might be brought on the station, this Company would undertake the mail-service with two only of the packets now in use, (the "Dolphin" and "Thetis,") supplying from their own fleet as many additional vessels as the service would require.

I would observe that this Company would not make themselves accountable for the casualties of the seas, for the mailpackets, or anything beyond the maintaining them in an efficient state, under the ordinary wear and tear of the service.

The advantages to the Post-office by the proposed plan would be—

1st, That they would have the service continued in the same satisfactory manner as at present, and without any expense.

2d, They would thus save the entire cost of maintaining any steam-vessels for the Liverpool

service, and prevent the recurrence of that loss which is now experienced on the station, and also the necessity of building additional and more powerful vessels to meet the increased power and speed to which steam-vessels are approaching.

3d, They would have two of their present vessels at once at liberty, to apply to other or shorter stations, and for which they would be fully adequate.

With respect to the other objects of your inquiry I beg to refer to my letter of yesterday, and am,

James Gardiner, Esq.

Sir, your obedient servant,
(Signed) CHAS. W. WILLIAMS.

No. 19.

Letter from
C.W. Williams, Esq.
to J. R. Gardiner,
Esq., 14th Jan. 1836.

SIR,—Lest there should be any misapprehension as to the agreement between the Post-office and the City of Dublin Companies, I beg leave to state, in addition to my former communication, that, with respect to the conveyance of passengers and the rate of passage-money, it was agreed the fares should be the same by the mail-packets and those of the Dublin Company, except in the event of opposition from other quarters, in which case each establishment should be at liberty to act on its own judgment, and with the view to their respective interests. Since the period of that agreement the fares of the mail-packets have been reduced from £1. 7s. 6d. to £1. 1s. Other parties have, in fact, introduced steam vessels on that station, and for the avowed purpose too of compelling the Dublin Company, by means of a vexatious opposition, to buy them off. During the continuance of that opposition the Dublin Company have been obliged, necessarily, to reduce their fares to the level of their charges, and which were capriciously varied from day to day. Under those circumstances of annoyance not only cabin, but deck fares were lowered, the latter from 5s. to 2s. 6d., and at that rate they now remain.

James R. Gardiner, Esq.

No. 19.

I am, Sir, your obedient servant,
CHAS. W. WILLIAMS.

No. 20.

Letter from
Captain Chappell to
J.R. Gardiner, Esq.,
15th Feb. 1836.

SIR,—In reply to your letter of the 12th inst., I have to report that, on superseding Mr. Richardson, as agent of packets at Liverpool, he delivered to me the following books:—20 volumes of duplicate daily returns and packet daily freight lists, apparently complete, from 29th August 1826 till 26th August 1835, being the whole period from the first establishment of packets at Liverpool till the day on which Mr. Richardson resigned the agency; 41 volumes of packet way-bills, apparently complete, from 29th August 1826 till 27th August 1835, as above; and 210 check-books of tickets issued to packet passengers.

All the books relate exclusively to the packet receipts; and I entertain no doubt that from them an accurate account could be obtained of the receipts made by each packet for any period since their commencement.

With respect to payments, Mr. Richardson delivered to me 11 packet disbursement-books, apparently complete, from the first establishment of the packets; 20 tradesmen's check-books for supplying packets with stores between said 29th August 1826 and 26th August 1835. Those for the "Thetis" are apparently complete; those for the "Etna" deficient from January 1832 to April 1833; those for the "Comet" deficient from June 1831 to June 1833; those for the "Dolphin" deficient from January 1829 to September 1830, and from July 1831 to April 1833. One volume of general receipts and disbursements from 20th November 1830 till 26th August 1835: this book, however, is incomplete, as it contains some entries of weekly wages paid to the packet crews, against which no amounts are affixed.

As relates to the disbursements, therefore, it may be said (to use a mercantile phrase, not however strictly applying to Post-office accounts,) that I am in possession of the day-books, but not of the ledger, of my predecessor's public transactions; and so soon as I discovered that he had not delivered to me the books containing copies of the quarterly accounts as transmitted to the Postmaster-General, (Mr. Richardson having absconded from Liverpool immediately after my arrival,) I applied to his son and former clerk, demanding such quarterly account-books. He showed me one of these books to prove that the public accounts were intermingled with his father's assurance business and private commercial concerns; but, as both were not entered on the same pages, Mr. Richardson, jun. promised to copy out the private affairs forthwith, and then to deliver the books over into my custody. Sufficient time having elapsed, (not knowing where to find the father,) I wrote to the son, again demanding that the books in question should be delivered up, but received for reply that he was not able to do so, having received orders from his father to forward to him all papers and books belonging to his affairs, which had been complied with. Accordingly, by the same day's post, I reported this circumstance officially to his Lordship the Postmaster-General.

All the books delivered by Mr. Richardson to me still remain in my possession.

I am, Sir, your obedient servant,
E. CHAPPELL, Agent for His Majesty's Packets.

No. 8.

Office of Woods, 9th February 1836.

MY LORDS,—Your Lordships having been pleased to refer to us two memorials from the Chamber of Commerce, and the merchants, bankers, and traders of the city of Glasgow, recommending the removal of the Post-office packets from Portpatrick and Donaghadee to Cairne Ryan and Larne, we were desirous that no expenditure should be incurred in works there until we had an opportunity of inquiring into the expediency of the change which they suggested.

In addition to the evidence which we received in August last, we have obtained a report from Captain Evans, who has recently visited Portpatrick and Donaghadee. This report we beg to submit to your Lordships' consideration, with the statements of several other naval officers resident there.

Your Lordships will perceive that the works at Portpatrick have been considerably damaged by the recent gales, and that a serious breach has been made in the south pier.

The information which we have received inclines us to believe that, if the proposed improvements were to be completed, the harbour of Portpatrick would not be rendered a safe and desirable packet station. We therefore beg to submit to your Lordships that no further expense may be incurred there, or at Donaghadee; and we hope that your Lordships will be pleased to direct that the works now in progress may be discontinued.

DUNCANNON,
H. LABOUCHERE,
SEYMOUR.

No. 9.

Memorial of the Chamber of Commerce of Glasgow, for Removal of the Packet Station from Portpatrick to Loch Ryan.

No. 9.

To the Right Honourable the Lords Commissioners of His Majesty's Treasury.

The Memorial of the Directors of the Chamber of Commerce and Manufactures established by Royal Charter in the City of Glasgow,

Respectfully sheweth,

That the merchants of this city, engaged in the trade to Ireland, complain that their correspondence with that country is subjected to what appears to them unnecessary uncertainty, and occasional injurious interruptions, from the port from which the packet is despatched from Scotland, Portpatrick, being nearly inaccessible in stormy weather.

That from the danger and difficulty of making this port in such times, it frequently occurs that no mail is received, and in the winter months that two, and even occasionally three mails are due, preventing the merchant from receiving advices for insurance, at the moment when it is most important that he should have it in his power to guard himself against risk.

That the trade between Glasgow and Ireland is every day increasing in amount and importance, and the possession of a means of transmitting the correspondence, free from interruption or delay, becoming of more and more consequence.

That your memorialists think this may be obtained, by moving the Scots packet station, from Portpatrick to Loch Ryan, accessible in every state of the weather, and where a completely sheltered harbour may be had, into which the packet may enter, or take its departure from, at all times.

That your memorialists are induced to press this transfer of the station with the more earnestness, that they are given to understand that the harbour of Portpatrick, upon the improvement of which £150,000 have been expended and voted to be laid out, cannot, with any amount of cost, be made safely accessible in stormy weather; while the harbour of Cairn Ryan, situated 15 miles north of it, on the east side of Loch Ryan, near its entry, may, with an outlay of from £2,000 to £3,000 only, to build a quay, be made a station for the packet, possessing the advantage of complete facility of access and of safety.

May it therefore please your Lordships to give this matter your consideration, and, on being satisfied that what has been stated with regard to it is correct, order the change of the packet station, which is requested, to be carried into execution.

And your memorialists shall ever pray.

Signed by the appointment of the directors, and sealed with the seal of the chamber.

JOHN G. HAMILTON, Chairman,
DUGALD BANNATYNE, Secretary.

No. 10.

Memorial of the Bankers, &c., of Glasgow, for Removal of the Packet Station from Portpatrick to Loch Ryan.

No. 10.

To the Right Honourable the Lords Commissioners of His Majesty's Treasury.

The Petition and Memorial of the undersigned Bankers, Merchants, Manufacturers and others, of the City of Glasgow,

Humbly sheweth,

That the commerce betwixt Scotland and Ireland is, to a great extent, annually increasing, and extremely beneficial to the interests, the prosperity, and the Revenue of both countries, and that this trade is nearly wholly carried on to and from the ports on the Clyde.

No. 10.

Memorial of the
Bankers, &c., of
Glasgow, for Re-
moval of the Packet
Station from Port-
patrick to Loch
Ryan.

That your petitioners and memorialists, in particular, are largely connected with, and deeply interested in, the commerce carried on with Ireland, the importance of which may be judged by the fact, that the number of vessels employed in the trade with this city was, last year,—inwards, 1,091; outwards, 1,561; whilst the value of grain and provisions *alone*, imported from Ireland to this quarter, cannot be less than £800,000 annually.

That everything tending to accelerate and render more regular and certain the commercial correspondence between the two countries, and between the north of Ireland and this city in particular, must tend to extend that trade, and prove advantageous to every interest, public and private, in the respective places and countries.

That during the winter months, when the traffic is in general greatest, frequent and injurious delays take place in the conveyance of the commercial correspondence, owing to Portpatrick and Donaghadee being chosen and maintained for packet-boat stations betwixt Scotland and Ireland.

That the passage betwixt these places is frequently impracticable for days together; nor can this obstruction be avoided or prevented so long as these places (but especially the former) are retained as the points of egress and ingress for the mail packets, running betwixt the two countries; nor can any expense or outlay, however great, ever render Portpatrick a safe harbour for any vessel to approach near to, or to enter. Large steam-boats, with a power sufficient to stem the winter storms in the Irish Channel, cannot enter the harbour at all; while small steam-boats which can enter the harbour, (though in stormy weather even the latter do so with the greatest danger,) are totally inadequate to stem the heavy seas which roll in that Channel at every season of the year, but especially during severe gales in October, November, December, January, and February.

That this being the case, remittances and orders are not only frequently retarded, to the great inconvenience and loss of the commercial world, but, what forms a still greater inconvenience and loss, insurance, and orders for insurance, at the time when these are most frequent and required, cannot be either regularly received or effected.

That Loch Ryan, situated about 15 miles to the northward of Portpatrick, forms a natural, a large, and a secure haven, into which vessels and steam-boats, of any tonnage or power, may safely enter and safely depart at all seasons, and during every hour, whether by day or by night.

That from £2,000 to £3,000 would be sufficient to erect a quay, affording the most ample accommodation, at Cairn Ryan, situated near the entrance of the lock, and on its east side, where steam-boats could land and take on board the mails, at every hour and in every season, with perfect safety; and that even till such a quay is constructed, steam-boats may land and take on board the mails at this place, without any material delay or danger.

That there has been already expended, and voted to be expended, by the public, on and for the harbour of Portpatrick, about £150,000 without any public advantage; and ten times the sum additional expended upon it, will never make it safe, or a harbour for any useful purpose.

That instead of granting and expending £23,700 more of the public money, as it is at present proposed to do, on the harbour of Portpatrick, your petitioners and memorialists humbly solicit that your Lordships would lay out the smaller sum, namely, £3,000, to erect a quay, sufficiently commodious for a mail-packet station, at Cairn Ryan, in Loch Ryan.

That the packet line of communication should be between Loch Ryan and Belfast, through Belfast lock, and which passage could be effected (distance 50 miles) by steam-boats of sufficient power, (say 200-horse,) in about four hours and a half.

That in the present state of the Belfast Loch Navigation, your petitioners and memorialists are aware that large steam-boats cannot approach that town at low water; but until the navigation is improved, and which improvement is, we believe, going on, it would be easy to forward the mails to and from the steam-boats by smaller boats, at such hours, without any risk or material delay. Moreover, and until the navigation above alluded to be improved, Donaghadee, on the Irish side, can be retained as a packet station, it being in general accessible, although the navigation near it is rough and dangerous in stormy weather.

That by making Loch Ryan, at the point Cairn Ryan, the packet station on the Scotch side, in future, the mails between Scotland and Ireland, and also between the northern division of the latter, and all England, and foreign countries, could be received with the greatest celerity, exactness, and safety that is attainable.

That the letters from London, and all the southern and western and northern parts of England, including all the Falmouth packet-letters and the ship-letters into Liverpool for Belfast and the north of Ireland, could reach Cairn Ryan from Carlisle by 4 P.M. each day; and the mails from Glasgow and Edinburgh (from the latter city through the former) could easily, by the present Post-office regulations and departures, reach Cairn Ryan at the same hour; and despatches from thence at that hour reach Belfast with both papers and letters at 9 P.M., and Londonderry by 6 A.M. on the following morning, several hours (a whole day in business as regards the latter place) earlier than those do by any other conveyance.

That Glasgow, besides constant certainty and regularity, would thus gain a whole day in its correspondence with Londonderry and other parts of the north of Ireland, and Edinburgh a whole day in all its Irish correspondence, besides having for each day a regular early morning delivery and the latest evening hour's departure. The return mails for Scotland, from Belfast, could reach Cairn Ryan by 12 noon each day, Glasgow (distance 76 miles) by 10 P.M. on the same evening, and Edinburgh, conveyed by the night-mail from Glasgow, at 3 A.M. next morning.

That this regulation would give to Glasgow, Paisley, Greenock, and other places near this city, their correspondence with all the north of Ireland always by the earliest morning delivery, and also, as regards business, to the latest hours for departure in the evening,—two things exceedingly desirable and advantageous; and all these advantages, too, can be carried into

No. 10.

No. 11.

Report of Captain George Evans on Portpatrick Harbour, 30th Jan. 1836.

Appendix G. Nos. 15, 16, 17, 18, 19, 20.

No. 11.

Belfast, 30th January 1836.

MY LORD,—Having carefully sounded and examined the harbours of Portpatrick and Donaghadee, I feel it my duty to represent to your Lordship that no further expense should be incurred respecting either of them.

Independent of the many objections to Portpatrick as a packet station, the gales of last week washed away a very considerable part of the glacis of the south pier, leaving the masonry quite exposed.

A reference to the enclosed evidence of the naval officers, engineers, and carpenter, of the packets at Portpatrick, all of whom I found zealous, experienced, and intelligent men, will enable your Lordship to see the necessity of immediately discontinuing the works at Portpatrick and Donaghadee.

In corroboration of the enclosed evidence, I beg leave to state that the "Spitfire" packet, in which I went from Portpatrick to Donaghadee on the 27th instant, could not return the same day with the mail, although the wind was fair, owing to the danger of attempting to enter Portpatrick in a westerly gale. Were the packet going to Loch Ryan, she could run in during any weather with safety.

Two small vessels have been sunk, within the last fortnight, inside of Portpatrick harbour. These vessels ran in for shelter in gales of wind, and after getting in they could not be saved.

Since the introduction of steam-vessels, the two natural harbours of Loch Ryan on the Scotch side, and Loch Larne on the Irish, afford very superior accommodation as packet stations, and might, at a trifling expense, be immediately resorted to with great national advantages. Vessels of any class or power might navigate there, day or night, with facility and safety.

Both the Glasgow and Carlisle mails would arrive at Cairn Ryan sooner than at Portpatrick; and were the letters for the north of Ireland sent direct from Larne, a great saving of time would ensue in the correspondence, and a long land journey be avoided.

I have the honour to be, my Lord,

Your obedient humble servant,

The Viscount Duncannon.

(Signed) GEORGE EVANS.

MINUTES of EVIDENCE relative to the PORTPATRICK STATION.

No. 12.

Evidence of Robert Wallace, Esq., M.P., 13th August 1835.

No. 12.

Robert Wallace, Esq., M. P., examined as follows :

13th August 1835.

Is there any information which you are desirous of affording to the Commissioners on the subject of the Post-office communications between Scotland and the north of Ireland?—Having been present during Mr. M'Queen's examination, I am prepared to confirm all the main features of his statement, and my belief to be that the post communication between the west of Scotland and Ireland, ought to be from Cairn Ryan with Larne, until the approach

Examinations.

No. 19.

Robert Wallace,
Esq., M.P.,
13th August 1835.

to the harbour of Belfast is put in that state that steam-vessels can go into it with ease and with safety, without resorting to landing passengers and mails in small boats.

There is no occasion at Cairn Ryan for a harbour; what I understand to be required is only a low-water pier—a straight building, running so that at all times of the tide the steam-vessels may run in and lay alongside of it.

It appears the sum necessary to erect this pier is estimated in the memorial from the city of Glasgow at £3,000; do you know on what grounds that sum is stated to be sufficient?—I have no personal knowledge of the fact; but I should suppose, or rather I feel assured, from the great respectability of the petitioners they would not have authorized such statements in their memorial without having good grounds to believe that they were correct.

And with regard to the names of the parties who have signed this memorial, I know a great many of the individuals; they are of the highest respectability and well informed on the subject; and further I am aware that the whole trading interest of Glasgow, of Paisley, of Greenock, and of all the large towns and villages connected with that manufacturing district and the shipping interest, would all join, with one accord, in proposing that the communication should cease by Portpatrick and Donaghadee for a more certain one.

You state that the place proposed for a landing place in Ireland, namely Larne, you would consider as a temporary measure; with respect to that on the Scotch side, Cairn Ryan, you would consider that as permanent?—Certainly permanent on the Scotch side. Nothing would be likely to occur to produce an alteration in that. With respect to the general question of post communication by steam-packets with Ireland, there is no doubt whatever it is essential and absolutely necessary to keep up the direct communication, as at present, between the nearest points of land, that is, by Portpatrick and Donaghadee, or Cairn Ryan and Larne; and that it would not do to resort only to communications by steam-packets from the Clyde to that country. At the same time I am satisfied it would be a very great convenience and advantage to the public, and would increase, and not injure, the revenue of the Post-office, to establish post communications by the steam-packets trading at present to those parts where the departure and arrival of private traders is so much speedier than the post is by land. And at the present rate, which the Post-office are said to pay to private vessels, (which I can't exactly ascertain, for the same secrecy is maintained in Scotland in all Post-office transactions as here,) for the communications by steam with small towns on the shores of the Clyde, or adjacent lochs and islands, I should imagine the absolute cost would be very small indeed of the communications to which I allude.

I understand there are 10 or 11 towns connected with the Clyde, and which it may be said cannot almost be approached by land-conveyance, with which post steam communication exists, and that the outlay on the whole does not exceed £100 a-year to the Post-office, whereas the revenue has very considerably increased since this direct communication, it having induced the use of the Post-office in place of resorting to private individuals to carry letters.

With regard to post communications from Glasgow and Greenock by water, from Glasgow the time required to Belfast is about 12 hours, by land it is generally 24 hours, and in extremely bad weather it is considerably more, and sometimes cannot be effected for several days. Londonderry is in the same situation; 10 to 12 hours from Greenock or from Glasgow takes the steam-vessels there in all weathers.

From Dublin to Greenock is a passage of 20 hours; the route by land by Portpatrick is about 40 hours.

Again there is no post communication at present with any part of England from the Clyde by steam, and it would be very convenient to have the privilege of a mail-bag going daily to and from Glasgow and Greenock and Liverpool by the private traders, inasmuch as the arrival by that mode of conveyance would bring the letters at a different time of the day than by the mail-coach.

To those small towns on the Clyde, when mails are sent by private steam-packets, do the Post-office send a man with the letter-bags?—They do not send a man farther than Greenock, I believe.

Do they then intrust them to the captain of the vessel?—They intrust them to the captain or the steward, I believe; but they do intrust them to a person in the vessel. From Glasgow to Greenock, I believe, they do send a man, but beyond Greenock, which is the point from which most of the mail communications depart they do not send anybody.

Are there any instances of letters being lost that you are aware of in this mode of communication?—I never heard of any.

You think they are as safe without sending a man as if the Post-office sent a man?—I am sure, practically speaking, they are quite safe, because I am confident had any losses taken place within these two or three years, they would have reached my ears; and it is chiefly within this period that letters have been so sent.

Then you think, if communication was established on the same footing between Glasgow and Liverpool that there would be no necessity for sending a special messenger with the letters in charge of the mail-bags there?—I am quite satisfied of it, provided the expense was borne of taking them from the Post-office, and to the Post-office, by a proper person, at each place, which is now the case in the towns connected with the Clyde, which I spoke of. I understand that a respectable porter is paid for taking down the mail-bags from the Post-office and depositing them, and a porter, known to the master of the steam-packet, receives them again and takes them to the Post-offices.

But between Glasgow and those little towns, the letters are probably of small value; now between Glasgow and Liverpool there would be a great communication of money letters?—I imagine there would not be many money letters sent between Glasgow and Greenock and Liverpool; there would not be a correspondence of great extent, although it would be of great convenience and well worthy of trial, provided the expense is not greater than I anticipate.

Examinations.

No. 12.

Robert Wallace,
Esq., M.P.,
13th August 1836.

The valuable letters would go by mail-coach as now; with regard to Ireland, I am sure it would be a great convenience, and it would be a great saving, because innumerable letters are sent, positively, and with my knowledge, in consequence of the distance and time being so much less by water than by land.

Are those steam-boats which take the letters between Glasgow and the small towns, steam-boats on their way to Belfast?—No, they are steam-boats which trade with those small towns and districts for the purpose of conveying passengers to sea-bathing places, and goods to and from the highlands of Scotland to the greater towns.

Then would you also recommend the steam-boats from Glasgow should be allowed to take letters to Belfast in the same manner that they do to those small towns?—Yes.

And also to Liverpool in the same way?—Yes, from Glasgow, or Greenock rather. The Clyde is sometimes blocked up with ice, and in very dry weather there is too little water for large steam-packets to do the distance without attending to the tide. Greenock at all times has ample water for every size of vessel, and, consequently, they can go from Greenock at all times; and the mails by land from Glasgow to Greenock being four times a-day, would bring them to a certainty within the given time, so that no delay could take place if Greenock was the starting place rather than Glasgow; but, with that exception, there is no preference. At present Greenock is the place from which most of those mail-bags I have spoken of are sent.

I may also mention, in corroboration of what fell from Mr. M'Queen, that the description of mail carriages in general use in Scotland is not at all what it ought to be.

Between Glasgow and Portpatrick?—Yes; they are, generally speaking, very inferior, and somewhat dangerous.

What sort of a carriage is it?—It is a very small mail-gig, to contain one person only.

It takes no passengers?—It takes no passengers, to the great inconvenience of the community. We are now nearly deprived altogether of the convenience and advantages of mail-coaches in the towns of Greenock, Paisley, Port Glasgow and others; the public are subjected to a charge of a halfpenny on every post letter, because, formerly, by a kind of agreement with the Post-office, a charge of a halfpenny was sanctioned on letters coming by the mail-coach; the coach has been discontinued, but the charge is kept on to the great inconvenience of the towns, inasmuch as a mail-coach would be convenient, safe, and respectable, as compared with the gigs. The steam communication between the towns of Glasgow and Greenock is now so incessant that a mail-coach would not fill well, perhaps, with passengers, and on this miserable pretext it has been entirely discontinued; the mail-coach would be a great convenience. The present mode of conveyance has been much complained of by the bankers and merchants of these towns. It was strongly objected to discontinue the mail-coaches, inasmuch as it is a very secure mode of sending large sums of money in bills and orders which are being transmitted three or four times a-day, between the towns; they very properly consider a little gig, with only one horse, insecure, and all this property committed to it.

Has there been any instance of property being lost?—I am not aware there has; there is a good reason why; the bankers of the two towns are obliged to employ porters of their own for the purpose of going at stated times by steam-boats, and not to trust their property in this gig; this consists with my own knowledge. In proof of the danger to mail-bags intrusted to a gig and a single horse going 10 miles an-hour, I may mention that on one occasion the horse took fright and ran into the sea near to Greenock, the gig was smashed, the driver made a very narrow escape with his life, the horse was drowned, and the mails detained.

Does that gig go from Greenock to Portpatrick?—No, the letters from Greenock to Portpatrick go in the true Post-office style; they first proceed to Glasgow, being about 24 miles in a contrary direction; they then take the circuitous route of arriving by Portpatrick to the north coast of Ireland, so as to make the absurd circuit, the map will best show.

If a mail-coach were established between Glasgow and Portpatrick, do you think the passengers would pay the expense?—I have no doubt it would pay the expense both between Glasgow and Portpatrick, and between Glasgow and Greenock, provided they were put on a right footing, and the former sent by safe harbours. I now understand it to be common in some parts of England; indeed I am positively informed the mail-coach, running between Yarmouth, in the direction of Birmingham, does take eight outside passengers; and that the cross mails in the south and west of England take four outside passengers. I should not recommend eight outside passengers being allowed to be carried. I should think that four would be the proper number, the more so, as four is the number at present transmitted by the Post-office on the London mail between Carlisle and Glasgow; and it is worthy of remark that this mail-coach with four outside passengers, and loaded enormously, as it always is, with letter-bags and luggage, actually runs the distance of 95 miles quicker than any other portion of the road of the same extent between London and Glasgow.

ROBERT WALLACE.

No. 13.

Jas. M'Queen, Esq.,
13th August 1836.

No. 13.

Mr. James M'Queen called in and examined as follows:

Where do you reside?—In Glasgow.

Are you well acquainted with the passage between Glasgow and Portpatrick?—Yes, intimately acquainted with all that part of the coast.

What is the distance from Glasgow to Portpatrick?—The distance is about 84 miles.

And are there at present any steam-packets going from Glasgow to Portpatrick?—None to Portpatrick; there are two to Stranraer.

Are you acquainted with the length of passage from Donaghadee to Portpatrick?—Yes, it is about 19 or 20 English miles.

Are you aware at all what quantity of communication there is going on there besides the mere mail-packet?—I believe there is not any; I am not aware there is any.

Are there passengers passing from Donaghadee to Portpatrick?—I do not think there are any except what go by the mail-packets.

Now, taking into consideration the great difference between 80 English miles and 19 English miles, do you think any passengers would be found to go from Glasgow to Donaghadee?—No, I do not think there would, because they could go much quicker to Belfast in steam-boats directly. They never would think of taking Donaghadee in their way if they are going to Ireland; and, in going to or coming from Portpatrick, they can take the Liverpool steam-boats.

Could they go at all times into Belfast?—At all times they could, into the lock; but they could not at all times of the tide approach the town.

Is there not a difficulty of landing the passengers at Belfast?—No difficulty in landing them at all. The steam-boats always take care to sail from Glasgow to Belfast, and from Belfast to Glasgow, so as to insure the time of high water as near as possible. When, from bad weather, they cannot do that, the passengers are, I believe, carried up in small boats a distance of about three miles.

You can only go into Belfast at certain hours?—At certain times of the tide, with large vessels.

And they leave Glasgow to suit those times?—Yes, or as near as they can.

What is the present state of the harbour of Portpatrick as a harbour for steam-boats?—The present state of the harbour of Portpatrick is very much improved compared with what it was; but no improvement they can make to the harbour of Portpatrick can ever make it a safe one, or one from which you could calculate the mail's arriving with perfect accuracy as to time. The steam-boats that they have on that station, although they have increased their power lately, are too small for the stormy seas of that coast; in bad weather they cannot stand the seas; they cannot make the passage at all in bad weather. If they have larger steam-boats, that are of sufficient power to stem the stormy seas in the winter months, they are too large to enter the harbour of Portpatrick with safety; it is so exceedingly narrow that if they were to miss half the breadth of the vessel they would be dashed to pieces; and, therefore, a steam-boat of sufficient power to navigate these seas, so as to convey the mails with perfect accuracy, and of a size similar to those which go between Glasgow and Liverpool, of the first class, cannot enter the harbour of Portpatrick with safety.

You have stated they could, with perfect safety, enter the harbour of Loch Ryan?—Yes, they can, at all seasons and during all hours of the day or night.

Could the larger class of steam-boats, which you have stated to be desirable for this station, use the harbour of Donaghadee?—Yes; the harbour of Donaghadee is much safer and more certain of entrance than Portpatrick; they can go in and out there at all times; but still that part of the coast is attended with danger.

Would Donaghadee be more dangerous for the large vessels than it is for the vessels of the present size?—No; they have depth of water sufficient for any vessel of sufficient power. I was there not long ago, and I think the depth of water is sufficient for a vessel of large size.

How much nearer to Glasgow is Stranraer than Portpatrick?—Stranraer is six miles from Portpatrick; but the part where the mail communication should be is at Cairn Ryan, about five miles from Stranraer.

How many miles would it be from Cairn Ryan to Donaghadee?—That is about 32 miles, including the land conveyance by Stranraer.

How much would it be by water from Donaghadee to Cairn Ryan?—About 32 miles; the same distance.

Are they not improving the lock in Belfast, so that, shortly, steam-boats will be able to go up there?—They are. I do not know how fast or how slow the work may be going on; but they are improving it; and they expect, before long, to be able to bring up large vessels and large steam-boats direct, at all periods of the tide.

When that is effected, would not the best communication be from Belfast to Loch Ryan?—I should think it would; there is only another station, which is nearly equal in point of distance; and at this moment superior in facility; that is Larne, to the north. Larne is about 14 miles distant to the north from Belfast; from Larne to Cairn Ryan, across, is about 40 miles; that makes 54 miles. That is exactly the same distance, to a mile, that the present mail route is from Belfast by Donaghadee and Portpatrick, and with this advantage, that there is one-half less land-conveyance to Cairn Ryan in the one case than in the other; and, from the slovenly manner in which the mails are conveyed, it takes a longer time by land than it would take by water.

What do you mean by "slovenly manner?"—They are conveyed in the most slovenly manner I ever saw on that coast, namely, in mail-gigs, the most wretched description of things I have ever met with in the kingdom; but they are going to put on a mail-coach from Glasgow to Portpatrick in October next.

How long does it take for the letters to go from Glasgow now to Portpatrick?—They go about the rate of seven miles an hour, and 12 to 13 hours.

How many miles is it?—It is about 84 miles; and I think it takes them 13 hours.

If they went by steam from Glasgow to Belfast would they not go in a shorter time than they now take by the present road?—If they went from Glasgow to Belfast by a powerful steam-boat they would certainly go quicker than they could even by the communication I have pointed out, or the other; but it would throw a prodigious irregularity into the whole of the correspondence, such as would be exceedingly inconvenient to merchants, for this reason—that the steam-boats always sail in the evening, looking to passengers and to goods, and the consequence would be that they could never run with that regularity so as to deliver the letters

Examinations.

No. 13.

Jas. M'Queen, Esq.,
13th August 1835.

properly even in good weather; whereas, in bad weather, they would be detained until past the proper hours of delivery to the merchants; for instance, a steam-boat leaving Belfast in the evening, if the weather was rough, would not reach Greenock until probably 10 o'clock or 12 o'clock at noon the next day; the letters could not get up to Glasgow for three hours more, when the whole business hours of the day, as far as the merchants are concerned for the Irish trade, are over; and it would have a similar effect in their letters leaving Glasgow for Belfast at a similar period of the day.

By the present system, what time do the letters leave Belfast?—They cannot leave Belfast until the arrival of the mail from Dublin in the morning, which is about seven o'clock.

What time do they get to Glasgow?—They get to Glasgow on the following morning about six o'clock, and they leave Glasgow at five in the afternoon, and they get to Belfast the next day about 12 o'clock, some hours after the despatch of the morning mails to Dublin; and, further, by that conveyance the whole of the day, as to business and return of communication, is always lost in Belfast. The mail for Glasgow is gone before they arrive, and therefore it is of no use to the merchant in transacting his business, while it interrupts, under the present regulation, the communication with Londonderry; and we lose a whole day, or nearly so, in our communication with the latter place.

Are the steam-boats employed between Portpatrick and Donaghadee belonging to the Post-office, or are they contracted for?—They belong to the Post-office, I know, because I had a good deal of communication and conversation with the Duke of Richmond on this subject when he was in office, and he seemed very anxious indeed to try to obviate the difficulties. The power they had two years ago was only 40-horse power; and he told me that they intended to send a boat of 55-horse power, which I believe they did; and because she has more power she goes through bad weather better than the other did.

Are there many days in the year in which the communication is now stopped between Portpatrick and Donaghadee?—I have had some communication with the Post-office on the subject, to know what view they would take of the subject; and they state that, last winter, we had very few interruptions. True, we had not, because the weather was exceedingly mild; such a winter as we may not see for 10 years again. On the preceding winter there were days following days in which we had no mail from Ireland; the passage could not be made at all.

The memorial from the Chamber of Glasgow, and now before this Commission, is drawn up and signed by the secretary, who is the postmaster for Glasgow, and who knows and states correctly the frequency and duration of the detention of the Irish mails to Glasgow.

Did you attribute that to the small power of the steamers?—They could not venture to sea, or keep the sea.

Did the larger class of steam-boats going between Belfast and Glasgow keep the sea at the time when the Post-office packets were not able?—Constantly kept the sea, and were always near to their time.

Are mail-bags ever sent by private vessels?—They did try, some years ago, to send mails to Ireland (I think to Londonderry) by steam-boats; but it did not answer for the reasons I have already mentioned. It created such a confusion in the Post-office arrivals and delivery that it was rendered of very little service to the merchant.

Is there a great deal of communication between Glasgow and Belfast and Londonderry?—A great deal, and daily increasing to an extent almost incredible.

Are there many passengers, or chiefly goods?—A very great number of passengers, and goods of all descriptions, things you could hardly believe; they are bringing salmon over in these steam-boats, preserved in ice, and selling in Glasgow market exceedingly cheap; eggs, and even buttermilk, they bring in the steamers.

They come in private steam-boats?—Yes.

There are considerable steam-boat companies connected with Glasgow?—Very large.

More than one?—Yes, many; I know not how many; a dozen or twenty.

Conducted by people of capital and respectability?—Yes.

Do you conceive they would be disposed to undertake the packet-service between Scotland and the north of Ireland?—No doubt they would contract for it with great readiness.

If Cairn Ryan was adopted as a harbour, would that be a safe harbour at all seasons?—Yes, every season of the year; it is a refuge for vessels inwards and outwards bound, at all seasons of the year, all hours of the day, and all hours of the night; there is not the smallest danger for vessels entering, and it is the finest anchorage perhaps in Great Britain; and, just at the point of Cairn Ryan, there is a little cove, where, with a very small sum of money, (I should state about £2,000 or £2,500,) there might be made a pier perfectly sufficient for any purpose.

Has this memorial from the merchants of Glasgow been signed by any considerable number of the mercantile classes of Glasgow?—Yes, all the merchants interested in the Irish trade, and in Glasgow; most respectable names.

What number of signatures are there attached?—I should say perhaps 25 of the principal firms; they are some of the first firms in Glasgow.

Does the road at present between Portpatrick and Glasgow go near Cairn Ryan?—Yes, just close past it.

There will be no new road to make?—Not an inch of road.

With your knowledge of the country and the communication, if there was no other impediment to it, which would you fix on as the most convenient points, for the object of the memorialists of Glasgow, for a daily steam-packet to Scotland and Ireland?—I would say, for accuracy and certainty of despatch, Larne.

Is there a good harbour there?—Capital; any vessel of any size may go into it.

And on the other side?—Cairn Ryan. If Larne is made the point, then the mails from Londonderry can get up there with a saving of a land-conveyance, instead of carrying them on

to Belfast; the mails from Dublin would be conveyed by Belfast, and carried on to Larne, without any delay or additional expense in the Post-office communication, and meet the mails from the north of Ireland, from Londonderry and Sligo, at that point, and thus tend to accelerate despatch.

Would there be many passengers from Cairn Ryan to Larne?—I think there would; not so many, perhaps, as if the vessel went direct to Belfast, because there is a land-conveyance on the Irish side, which would be an objection on account of the expense.

Do you conceive any one of these steam-companies you have mentioned would be disposed to contract, at a reasonable rate, for the packet-service between the two points you have mentioned?—I think they would, and more so now that they have put on, or are going to put on, a mail-coach from Glasgow to Cairn Ryan and Portpatrick.

Do you think there would be any probability of any goods being carried by those packets from Cairn Ryan to Larne?—There would be some; I should doubt if there could be a great deal; but there would be certainly a very great deal of cattle carried over there, both backwards and forwards.

Are there cattle now carried from Portpatrick to Donaghadee?—There are, and I believe a good many; but I cannot say the numbers. That district of Scotland connected with Ireland is a grazing district.

Supposing the change you suggested took place at the points from which the mail should depart and arrive, do you think it would make any difference in the trade between the two countries?—It would tend to increase it, as rendering the communication more certain and more safe.

Would it require any outlay to make Larne a fit harbour?—I do not think it would require sixpence.

In case Cairn Ryan was adopted on the Scotch side, you think Larne would be better than Donaghadee on the Irish side?—I think so, decidedly; it is a safer harbour, and it does not increase the distance in the conveyance of any of the mails, while it rather decreases the distance of the carriage of the Londonderry mail. It would be found to correspond exactly and come within the hours of arrivals and departures from the Post-office in all their different ramifications, which is a thing that must always be kept in view, else you create an additional expense to the Post-office, and unnecessarily.

Is there any nearer point to Glasgow than Cairn Ryan?—None that a vessel could with any safety approach, or that either time or distance could be saved.

Where do the private steamers run?—They run along the Frith of Clyde from Glasgow, straight on to Belfast, through the mid-channel. In the conveyance of the mails, also, along that district, if the Post-office stations were altered the Post-office would still have an expense to carry the mails from and to the coast-towns. Changing the stations would only create a greater expense, without benefiting the public.

Are there many days of the year when the steam-communication between Belfast and Glasgow is stopped?—Very seldom; they are good boats, and I am not sure of hardly an instance, in the very worst weather, when they are stopped; but they are greatly retarded, and they would not arrive at Greenock, in bad weather, until after the departure of the mails from thence to Glasgow, and would thus disarrange the correspondence. Regularity, in mercantile correspondence, is even more necessary than speed.

Are there any other observations, with reference to the mail communication between the north of Ireland and Scotland, you are desirous of making to the Commissioners?—I am not aware there are any others. Our object in Glasgow is to get a proper station on the Scotch side; the other stations, on the other side, we leave to the discretion of Government. I merely point out this as the proper station.

Your object is to get a station on the Scotch side, from which there would never be any danger of the mails missing?—Yes; and there they never would; with a steam-boat of a proper size they never would.

No. 14.

Friday, 21st August 1835.

Sir John Rennie, and Sir James Dalrymple Hay, were called in and examined as follows:

(To Sir John Rennie.) Have you had any opportunities of becoming acquainted with the harbour of Portpatrick and the adjoining coast?—I have ever since the year 1815; and since the year 1821, I have been constantly in the habit of going there annually for the purpose of visiting the works of Portpatrick harbour as well as of Donaghadee harbour in the capacity of principal engineer.

Do you conceive Portpatrick to be a sufficient and a good harbour for the purpose of communication by the Post-office communication by steam between the south of Scotland and the north of Ireland?—I conceive Portpatrick, under all the circumstances, is the best place that can be adopted—the harbour is not quite finished, but when the works have been completed, for which the Treasury have already granted the money or have agreed to furnish the money, I have no doubt but that Portpatrick will be a perfectly safe and efficient harbour for all vessels drawing 12 feet water and upwards.

Are those vessels that can enter the harbour large enough to make the passage well?—Yes; there is no doubt whatever of it, there being at least 20 feet at low spring tides near the jetties, and 25 near the pier head.

Is there anything in the situation of Portpatrick which prevents vessels getting out of it in all states of the wind and weather?—I conceive there is not, if a steam-boat of sufficient power be employed whenever it is prudent to put to sea.

Are you acquainted with the situation of Cairne?—I know the situation of it generally,

Sir John Rennie
and Sir James
Dalrymple Hay,
21st August 1835.

because I have passed by it repeatedly, but I have not surveyed it with the same degree of attention that I have Portpatrick.

Did you not survey the coast there in order to find the best place for a harbour?—Yes, I did.

And in that survey you did not take in Cairne did you?—No, that was not within our instructions.

Do you conceive that Cairne would possess any advantage over Portpatrick?—As a station for communication permanently with the north coast of Ireland, I should say decidedly not.

Are you able to state to the Commissioners, whether in point of fact the communication between Portpatrick and the north of Ireland has been continuous and uninterrupted?—I believe upon the whole there are very few stations that have been more regular in the conveyance of the mails than Portpatrick and Donaghadee have been within the last four or five years.

Has there been any alteration in the size of the vessels within the last four or five years?—I believe not. It should be understood that the prevailing winds on the coast are chiefly from the west and south-west; and that during the prevalence of gales of wind from those quarters, supposing a packet to start from Portpatrick upon the flood tide, the tide coming from the northward and the wind from the southward, the packet would be prevented from going to leeward, and would inevitably make her passage if it were possible for a vessel to keep the sea. In the same manner in returning from Donaghadee to Portpatrick (the wind being favourable, which it would be) she would have no difficulty whatever in returning; whereas supposing a packet to start under the same circumstances from the Cairne, she would have from six to seven miles to go in the first instance to Corsill Point, and then, instead of having the tide to support her, she would have the tide against her as well as the wind, and she would have an increased distance of at least seven to eight miles to go through a tremendously heavy sea against a head wind, before she could make the Black Head at the entrance of the Loch of Belfast; she would then have to steam up against the wind the whole length of the Loch (about 16 miles) to Penmoyle, and there she must lie, if she arrives there at low water, and send her mail at least two miles up by a boat. Now, supposing instead of going to the Loch of Belfast she were to go to Larne, she would still have to encounter the extra seven or eight miles of passage against a heavy sea and a head wind, besides the extra seven miles in coming from the Cairne to Corsill Point, making in all an extra distance of 14 or 15 miles, or $36\frac{1}{2}$ miles instead of $21\frac{1}{2}$ miles of sea passage. So that, in point of fact, the mail going by Portpatrick under the same circumstances would be at Belfast before, in the other case, she would reach the Irish coast. And, moreover, it should be observed that there is a very dangerous reef of rocks called the Maidens, a little to the north-westward of Larne, and in dark and stormy weather, particularly when the wind is blowing strongly from the south-west, she would encounter considerable difficulty in steering clear of them, and it is, I believe, a well-known fact, that the powerful large steam-boats which ply between Liverpool and Glasgow are not unfrequently compelled to put in to Loch Ryan, in consequence of their not being able to get round Corsill Point. So that I have no hesitation whatever in saying, under all the circumstances, viewing it in every possible way, as a communication between the two countries, that there are no places so well adapted for maintaining that communication as Portpatrick and Donaghadee. There is another observation also, which is this,—it should be considered that in the Cairne there is no sort of accommodation now, by way of a pier or landing-place, which would have to be built, at a very considerable expense, in order to give anything like the same accommodation that the packets now have at Portpatrick and Donaghadee.

Do you believe that Portpatrick is a safe harbour for steam-boats to enter in any weather?—I consider it is so decidedly whenever it is prudent to go to sea, that is, when the harbour is finished according to the original plan, for which the money has been already agreed to be advanced by the Treasury; when that is done I have no doubt it will be a perfectly safe harbour to enter into under any reasonable circumstances.

Do you think that the larger class of steam-vessels will be able to enter it under any circumstances?—I mean such steam-boats as will be large enough to maintain the communication between Donaghadee and Portpatrick.

What sized steam-boats and of what power do you conceive would be necessary for that purpose?—I should consider that the power for maintaining that communication would be from about 60 to 80-horse.

What is the present power of the steam-boats?—I believe about 40 horse including the two engines.

Are you acquainted with the harbour of Donaghadee?—Yes, I am, very well.

What state is that harbour in at present?—It is very nearly finished.

Is the money voted?—Yes, and it has been done within the original estimate. I think there was no grant for it this year at all.

Do you conceive Donaghadee harbour to be a good and sufficient harbour for the purpose of steam communication with Scotland?—I do consider it is perfectly so.

Will that harbour admit the larger class of steam-vessels?—It will admit all vessels drawing 15 feet at low water spring tides.

What size would such vessels be?—There are very few steam-vessels that draw so much as that.

And in your opinion they will be able to get in and out in all weathers, will they?—Yes, whenever it is prudent to go to sea, they will always be able to get out and get in. There is another point which I should wish the Commissioners to consider; in effecting this communication between the two countries a short passage, particularly in stormy weather, is a very great object, because although a steam-boat is usually not so much affected by adverse

weather and wind as a sailing boat, yet she, nevertheless, more or less experiences considerable inconvenience and detention, and of course the longer she is at sea the greater is her liability to accident. Now in these short passages, such as between Portpatrick and Donaghadee, being only about 21½ miles, it frequently happens that during the prevalence of a very severe gale of wind, there is a lull for two or three hours, during which time a packet might start and make a passage before the gale had increased again to its former violence, whereas in a passage of double that distance, she would not even venture out of port to trust to the continuance of the lull.

The time when you surveyed the coast was before the application of steam to packets, was it not?—Yes, it was.

Are you aware whether it has been surveyed again since the application of steam to packets?—The same circumstances exist now which did then, and although they might not apply so strongly against steam-boats as they would against sailing-boats, yet it does not appear to me that the principle is at all altered by that circumstance.

Will you have the goodness to look at these two memorials that have been presented to the Treasury from the merchants and directors of the Chambers of Commerce, and manufacturers in the city of Glasgow, and make any observations upon them that occur to you. [*The two memorials were handed to the witness.*]—I believe I have answered every point relating to them in my examination, and I have only to add that, with every respect for the memorial and the memorialists, I certainly have no hesitation in disagreeing with them, for the reasons already stated in the former part of my evidence, and although, during fine weather, steam-boats with passengers may always effect their passage very well anywhere, in time proportioned to the distance, yet, for a constant communication, and as a head station for the purpose of communicating between the north of Ireland and the south-west coast of Scotland, I am decidedly of opinion that there are no places so good as Portpatrick and Donaghadee, and I am quite satisfied that when these harbours are completed as now proposed, and for which money has been granted by the Government, that there can exist no reasonable ground of complaint against them.

Do you know whether it has ever happened that the steam-boats from the Clyde have made their passages to the north coast of Ireland at seasons when the steam-boats from Portpatrick have not been able to leave the harbour?—I have not heard of that, but I have frequently heard it stated that the steam-packets between Portpatrick and Donaghadee are not sufficiently powerful, and that the reason given for not employing more efficient packets was—that when the harbour was completed, then the Government would have better packets, but until the harbour was completed they could not tell precisely what was necessary.

Then if such were the case you would attribute that circumstance rather to the insufficient power of the steam-boats than to any defect in the harbour of Portpatrick?—I have no doubt whatever about it.

Then it is your opinion that the complaints of the memorialists will be fully answered by the better packets that will be employed when the harbour is completed?—I should think so, but I am not at all aware what means are taken to make the land communication perfect, but as regards the harbour, I am quite satisfied that if packets of a sufficient power are employed when the harbours are completed that the communication will be maintained in a much more regular and effective manner than can be done by any other station on that coast.

Do you know what is the size of the largest class of vessels by steam that go between the Clyde and the north of Ireland?—I do not know the exact power of them, but I have heard they are very large; I have heard that they are above 150-horse power. I should say no Government would go to the expense of getting packets of that power, when packets of about one-half the power would answer the purpose just as well.

(*To Sir James Dalrymple Hay.*) Are you well acquainted with Portpatrick and the coasts in the neighbourhood?—I am, and have been ever since 1812, and the coast about there.

What opportunities have you had of becoming acquainted with Portpatrick?—I am acquainted with it from living in the neighbourhood. I live within 11 miles of it, and I am one of the commissioners of Portpatrick harbour, and have been so from the commencement.

You have heard the opinion expressed by Sir John Rennie in the evidence he has just given upon the sufficiency of Portpatrick as a harbour for steam navigation between Ireland and Scotland?—I have.

Do you agree with him in that opinion?—I do.

Has the communication of the steam-packets between Portpatrick and Donaghadee of late years been regular, or has it been frequently interrupted in the winter months?—I should say it has been more regular than any other steam-packet station, and that there has been less interruption.

Are you able to state what the interruptions have been?—I am not able to state the number of times in the year, but I do not think it was this last winter above twice, certainly not above three times.

Are you acquainted with Cairne?—Yes, I am, very well.

Do you conceive that Cairne would be a better station for the Post-office communication with Ireland than Portpatrick is?—I should think it would be longer, and that there would be more difficulty in getting out.

Would it not, in the prevailing winds in rough weather, be more easy for steam-vessels to get into Cairne than it would be for them to get into Portpatrick?—That may be; in getting out they have the same wind to meet with when they get to Corsill Point, which is seven miles from Cairne.

Is not the difficulty experienced by steam-vessels from the prevalence of the westerly winds generally in getting into the Scotch harbour rather than getting out of it?—The south-west wind is the worst wind,—not a westerly wind.

Examinations.

No. 14.
Sir John Rennie
and Sir James
Dalrymple Hay,
21st August 1835.

In Loch Ryan steam-boats of much larger size could enter than would ever be able to enter Portpatrick—is not that so?—Yes, any sized steam-boat could come there, but I should say that the present difficulty in Portpatrick is the want of power in the steam-boats rather than the want of size, because the size of the boats that come there is large enough.

It has been represented to the Treasury in the memorial of the merchants of Glasgow, that £3,000 would be a sufficient sum to erect a quay adequate to the purpose of a mail-packet station at Cairne Ryan. Are you able to express any opinion upon that?—No, I am no judge of that.

(To Sir John Rennie.) You have heard the question that has been put to the former witness, perhaps you could favour the Commissioners with your opinion upon that point?—I certainly have not made a sufficiently minute examination of the Cairne, so as to be able to give an accurate estimate of what it would cost, but instead of £3,000 being necessary for that purpose, I should consider that £30,000 would be much more like the sum.

Do you consider that Portpatrick is generally useful as a harbour independently of the purposes of the Post-office?—Portpatrick is chiefly a packet harbour. There is no trade in the neighbourhood.

Do vessels in stress of weather ever put into Portpatrick?—They do sometimes, but Portpatrick is not considered as an asylum harbour.

Is Loch Ryan considered as an asylum harbour?—It is more so than Portpatrick.

What will be the width of the entrance of the harbour of Portpatrick when the proposed works are finished?—The outer entrance will be about 260 feet, and the inner entrance between the jetties 160.

Do you conceive that that width will be sufficient to admit, in all states of the weather, the entrance and egress of steam-boats of the class you have mentioned?—Considering the size of the harbour, I conceive it will be better than if it were wider.

What is the direction of the entrance, with respect to the compass?—South-west.

No. 15.

Statement of
Captains Henry
and Fayrer,
25th Jan. 1836.

No. 15.

Captain John Little, R. N., Agent at Portpatrick.

Portpatrick, 25th January 1836.

Has been in His Majesty's Navy 41 years, and was appointed agent at Portpatrick in 1825, when steam-vessels were first put on the station. There are two steam-vessels, the "Spitfire" and "Fury," of about 106 tons each, employed for the conveyance of the mails. Their power has been increased, by giving them larger cylinders in 1833, from two 20-horse power, to two 25-horse power engines each vessel. These vessels draw six feet two inches of water, are 94 feet long, and 30 feet 10 inches over all. Vessels of large size could not, without great difficulty, enter Portpatrick harbour; and the only situation in which a vessel could lie afloat in it is where the packets are moored, and there is not room for more than two vessels.

The entrance into Portpatrick is exposed to the prevailing westerly winds, and during a gale from that quarter a heavy sea sets in to the harbour. A vessel cannot get in even to the packet berth until the first quarter of flood, as there is only four feet water at low water ordinary spring tides, and the channel so very narrow and tortuous that nothing but a steamer could attempt it in bad weather. For want of a dredging machine the harbour is now filling up, and unless cleaned out in the summer may in a few years be rendered perfectly useless, even for the present small class of packets.

Were the Portpatrick packets obliged to start at a given hour they would not be able to do it as they must wait for the tide, both going out and coming in, but as they are not limited for time they are enabled to wait for the tide on both sides of the channel.

The facing of the south pier, or the outer glacis, has suffered very much in the gale of Saturday last, a great trench being made in it, and the whole displaced up to the masonry of the pier. During the gale a small sloop, running in for shelter to Portpatrick, was wrecked and sunk inside the harbour.

Were a packet running for Portpatrick in a gale of westerly wind, and happen to arrive off the harbour at low water, she must run on the bank, and remain there until the tide flowed, exposed to whatever sea might be running into the harbour at the time. This has always been the practice when the packets have arrived at low water. Steam-vessels suffer more by getting aground than any other class of vessels.

(Signed) JOHN LITTLE.

We have read over the above statement of Captain Little respecting Portpatrick harbour, and perfectly agree in every part of it.

WM. HENRY, Lieut. R. N. Commander of His Majesty's packet "Fury."

R. T. FAYRER, Lieut. R. N. Commander of His Majesty's packet "Spitfire."

No. 16.

Statement of
Captain Little,
25th Jan. 1836.

No. 16.

Captain John Little, Agent.

Portpatrick, 25th Jan. 1836.

The "Spitfire" and "Fury" have each a crew of nine men, viz., one captain £250 a-year, one mate £1. 2s. 6d. a-week, one engineer £2. 2s. a-week, one fireman 17s. a-week, one steward 13s. a-week, four seamen 13s. 1d. a-week.

Captain Little has also three boats' crews under him; two at Donaghadee consisting of seven men, and one boat's crew at Portpatrick consisting of five men. These boats' crews are paid 13s. a-week per man. The reason why two boats' crews are employed at Donaghadee is from there being more difficulty attending getting the packets in and out there than at Portpatrick.

The coals are bought by Captain Little at the Duke of Portland's colliery at Troon, by order of the Post-office. They are purchased in the summer, and laid in store, at the most economical price. They are not contracted for, nor is he at liberty to contract for them, or purchase them from any other colliery.

Stores of ordinary consumption are purchased by Captain Little at Belfast, Liverpool, or wherever he can get them most economically and best. When stores are issued to the packets, they are not indented for by any of the officers, nor are there any expense-books, or checks, kept on board any of the packets.

The captains of the packets are not held responsible for any stores issued to their vessels; there being no receipt given when issued, nor any taken for old stores when returned. The whole of the store accounts are kept by the storekeeper under the immediate superintendence of Captain Little. There is no system or regulation adopted by the Post-office relative to stores as is done in all vessels under the Admiralty.

He is of opinion that it would be most desirable to adopt the system pursued by the Admiralty, not only with respect to the stores, but in all other matters connected with the maritime branch of the Post-office Department.

The captains of the Portpatrick packets pay £12. 10s. a-year out of their salary of £250, towards a superannuation fund.

(Signed) JOHN LITTLE.

The packets on the Portpatrick station convey across merchandise in boxes and cases, hides, dead pigs, cattle, donkeys, sheep, &c. &c., Captain Little attending to the packets not being seriously lumbered by such cargoes.

(Signed) JOHN LITTLE.

No. 16.

Statement of
Captain Little,
25th Jan. 1836.

No. 17.

Portpatrick, 23d Jan. 1836.

We, the undersigned commanders of the "Spitfire" and "Fury," Post-office packets, declare that our vessels suffer very much by taking the ground at Portpatrick, and that, even lying in their proper berths, they send so violently with the sea that the bilheads, quarter-timbers, and cavelts are frequently torn out of them, or very much strained, so as to cause frequent repairs. The packets on the Portpatrick station require always to have additional strengthenings to withstand the sea in the harbour.

We never make any suggestions in the way of improvement, or otherwise, in our packets; because, if we did, we would be certain they would not be attended to, but, on the contrary, we would, as we have experienced, be reprimanded.

We think it quite impracticable to enter Portpatrick harbour during south-westerly gales, the entrance is so narrow and crooked; and even vessels frequently suffer severely in taking the ground near low water time.

It would be very desirable to have another harbour selected, if possible, when so much risk and difficulty would be avoided. Should any accident occur to our engines in getting out of Portpatrick, during a gale from the north-west to south-west, nothing could save our vessels or our lives.

We are frequently put to great inconvenience by carrying cattle, &c., which annoys our passengers by the offensive smell. And at one period, Captain Henry, not wishing to have some families that were on board annoyed by drunken pig-drivers, who insisted on going into the cabin, was, at the representation of these pig-drivers, reprimanded by the Post-office, and made pay the difference between the deck-fare (which he only charged the drunken men,) and the cabin-fare, as he did not allow them to go into the cabin.

There are three rates of fare in the Portpatrick packets, which we think very inconvenient and invidious, as we are frequently at a loss what to do, whether to charge 8s., 5s., or 2s.

The 8s. fare is for cabin-passengers; but the 5s. and 2s. are for deck-passengers only, and to be charged according to the appearance of the individual. This has frequently caused great difficulty and trouble in collecting the fares.

(Signed) W. HENRY, Lieut., R. N., Commander of H. M. packet "Fury."

R. T. FAYRER, Lieut., R. N., Commander of H. M. packet "Spitfire."

John Wallace, Carpenter to the Post-office packets.

For the last 10 years I have found it necessary to strengthen all bilheads, fore and aft, of the packets on this station; and, after making them as strong as I could, I find they are frequently torn out by the sea in the harbour. The "Fury's" quarter-timbers were torn out of her on Saturday last.

(Signed) JOHN WALLACE.

bad weather, they are very much shook, and that the engines are exposed to a severe trial. The cement-joints and smoke-joints are subject to be injured when a steam-vessel takes the ground; and if the "Spitfire" and "Fury" were not very small vessels, with light engines, many accidents would occur when they strike heavily going into Portpatrick.

The engines are very light, being only two 20-horse power, with the exception of large cylinders to enable them to work up to two twenty-fives by using expansion-steam. The pressure at present on the safety-valves of the boilers is about six pounds on the square inch.

When the packets are even moored in Portpatrick harbour they range about so much in bad weather that the taughtening of the shore-fasts, and the striking the quay, shakes the engines exceedingly, and renders repairs more frequent, as well as requiring great attention on the part of the engineers to keep their engines in order.

Neither the "Spitfire" nor "Fury" have got a branch-pipe to the force-pump in the engine-room to use in case of fire, nor is there any means of extinguishing fire except by the wash-deck buckets, which it would be very difficult to use if the vessel was going fast through the water. Steam-vessels should always be provided with a pump that could be connected with the engine and used to throw water, by a hose, to any part of the vessel in case of fire.

(Signed) ANDREW M'WILLIAM, Engineer of the "Fury."
ADAM DAVIDSON, Engineer of the "Spitfire."

No. 20.

Statement of
Messrs. Smith,
Davies, Fayrer, and
Grey,
25th Jan. 1836.

No. 20.

Donaghadee, 25th Jan. 1836.

The harbour of Donaghadee is very much exposed in gales from the north-east to east-south-east, which occasionally occur in the spring. During these gales no vessel should attempt to enter Donaghadee harbour; were a steam-vessel to attempt it even she would inevitably be lost or very much damaged.

The "Britannia," a steamer that ran into Donaghadee in an easterly gale for shelter, was lost; and at another period two sloops, belonging to the Troon, were wrecked under similar circumstances.

The harbour, at low water, is very contracted, and there is a very dangerous bed of rock right in the middle of it. The bottom is so hard that no anchor would hold; and a heavy sea sets in, in easterly gales, which would dash any vessel to pieces against the pier.

Independent of the danger attending Donaghadee harbour, and its unfitness for a packet-station from the impossibility of entering in easterly gales, there is a lighthouse erected on the pier, which, when it is lighted up, may, from its position, occasion much mischief to vessels navigating the Irish Channel.

This lighthouse will be very soon ready for lighting; and, in our opinion, if the light is not lowered considerably, and the glasses so deeply stained that it cannot be mistaken for the other channel-lights, the most serious misfortunes and losses will ensue.

This subject is, in our opinion, deserving immediate and serious consideration; and we beg leave to suggest that the light should be blinded, except in the direction most useful for a vessel entering the harbour at night.

The harbour-master of Donaghadee, being no seaman, and having no boat's crew, anchors, or hawsers, ready to assist a vessel, considerably increases the danger attending Donaghadee harbour.

(Signed) CHAS. SMITH, Commander, R. N.,
Inspecting Commander of the Coast-guard.
JOHN H. DAVIES, Lieut., R. N.,
Chief Officer of the Coast-guard at Donaghadee the last seven years.
R. T. FAYRER, Lieut., R. N.,
Commanding H. M. Steam-packet "Spitfire," four years and a half on this station.

With respect to vessels taking Donaghadee harbour, in east-south-east or easterly gales of wind, they would run great risk of being lost; but a steam-vessel would have considerable advantage over a sailing vessel, and would not be in such danger. The holding-ground in the harbour is not good; and a vessel coming broadside on to the quay would be seriously damaged.

With regard to the loss of the "Britannia" steamer, I was informed she sat down on her anchor; but I was not an eye-witness to the transaction. I was present on the day in which the two sloops came in during a very heavy gale, one of which became a total wreck, the other was got off and repaired.

As to the light, I am of opinion were there a blue-light placed in the centre of the lighthouse, so as to distinguish it from any other channel-light, there would be no danger to apprehend.

(Signed) W. H. HENRY, Lieut., R. N.,
Commander of H. M. Post-office Packet, "Fury."

No. 21.

Statement of
M r. Logan.

No. 21.

Mr. *Ralph Logan*, Postmaster, Greenock.

Since the new Act came into operation permitting letters to be sent to Ireland and other parts by private steamers, the public have taken advantage of this means of sending a part of their correspondence, which would probably have been sent without the intervention of the Post-office before this facility was allowed. At present it is not sufficiently known to the public that they can avail themselves of the steamers to send their letters by. In the summer season, when the steamers ply regularly every day to Belfast and Liverpool, there is not the smallest doubt that an immense correspondence will be sent by these steamers through the medium of the Post-office and be productive of a considerable revenue, as Mr. Logan believes that formerly the letters were sent by these steamers, although from the regulations which existed the letters could not pass through the Post-office nor any revenue be derived from them. The new system

coming into operation in the dead of winter affords no fair criterion to judge of what the ultimate result will be here. Mr. Logan is quite sure that it will be considered an advantage to the mercantile interest and also be beneficial to the Revenue.

The present mail-carriage for the conveyance of the Greenock mails has been in use for the last four or five years. When they had a mail-coach from Greenock to Glasgow, the bankers availed themselves of the protection and security which it afforded to send up their parcels daily. No bankers' parcels can now be sent in the gig which has been substituted for the mail-coach.

(Signed) RALPH LOGAN.

Statement of Mr. Logan.

No. 22.

Mr. James Lemon, Harbour-master.

Donaghadee, 25th January 1836.

Mr. Lemon has been 10 years harbour-master, and was appointed by the Lord Lieutenant of Ireland. He was paid by the Harbour Company £150 a-year up to the last year, when the commissioners informed him they had no funds to pay him from any longer. Mr. Lemon then applied to Sir Francis Freeling for a salary, and he now gets £100 a-year from the incidental fund of the Post-office.

Mr. Lemon was formerly agent to a company of merchants, who took the mails across the channel; he held that situation from 1791 to 1825, when he got appointed harbour-master.

Mr. Lemon is not a seaman; he was paid by the company of merchants when he was agent. He never received any pay from the Post-office until the last year. He looks upon his present salary from the Post-office in the light of remuneration for long services as agent to the private company who conveyed the mails.

This private company would not allow Mr. Lemon anything after the mails were taken from their vessels, nor did they give any allowance to their other officers.

(Signed) JAMES LEMON.

No. 22.

Statement of Mr. Lemon, 25th Jan. 1836.

No. 23.

James and George Burns, Thomson and M'Connell.

There is now a communication by powerful steamers from Glasgow to Belfast every day (Sundays excepted). They carry a regular letter bag, which arrives at Belfast in considerably less time than they can reach their destination by Portpatrick. The average passage from Glasgow is about 10 hours. Both the companies are desirous of affording every facility to the Post-office for the conveyance of letters, and can have no objection to any arrangements which they may think necessary to make to prevent any fraud being committed. The companies will, in future, put a note to their advertisements, stating that letters will be conveyed by their vessels. It is not, at present, generally known that the Post-office send letters by the private steamers, which prevents this mode of conveyance being as yet generally made use of; although the companies are entitled by the recent Act to 2d. on each letter, they do not consider the emolument of any consequence, and would have willingly carried the bag free of any charge to the Government. They consider that they have a great interest in expediting the transmission of correspondence between Glasgow and Belfast, and would be prepared to make a sacrifice to effect this object.

APPENDIX (H.) *Examinations.*

Examinations.

No. 1.
The Duke of Richmond,
23d June 1834.

No. 1.

23d June 1834.

Is your Grace of opinion that the present mode of conducting the establishment by Government packets, is the best which could be devised for the public convenience, and the security of the Post-office revenue?—I am of opinion that the system of employing steam-packets, the property of the Crown, and commanded by efficient officers in His Majesty's Post-office service, is preferable to contracting for the conveyance of the letters in private vessels, for the following reasons amongst others:—that it is of the greatest importance to this country that the correspondence should not be detained or delayed; that you cannot expect the captain, appointed by a private company, should be so anxious to put to sea in bad weather, and, when at sea, to hazard the wear and tear of his machinery and vessel, by forcing it on in a heavy sea, thereby entailing upon the owners, of whom he may be one, a heavy expense,—as the captain in the Post-office service, whose character is at stake, and who would subject himself to dismissal if he did not use every possible exertion to effect as quick a passage as possible. From, however, believing that there was a strong feeling in the House of Commons in favour of contract, and not then entertaining the objections I do now to the extension of the system, I tried the experiment, and having abolished the Harwich sailing vessels, I advertised for tenders for the conveyance of the mails to Hamburg, and also to Rotterdam, and made a contract for one year, by which the mails were conveyed to those two places from the river Thames; the vessels were permitted to carry merchandize, and I appointed a marine mail-guard, whose duty it was to take charge of the mail, and to keep a journal, so that the Postmaster-General might be aware of the manner in which the passages were made: the system not having been changed, I believe, the journals, from the commencement, can be produced to the Commissioners; the letters for Sweden were conveyed by sailing vessels to and from Gottenburgh, for which latter service the English Post-office received £1,500 per annum from the Swedish Government. Upon my receiving an application from the Minister of that Crown, to change the place of departure from Harwich to Hull, and to substitute steam in lieu of sailing vessels, I consented that the Swedish Government should make a contract with an English Company, and that the English Post-office should pay to that Government £1,500, as former circumstances prevented the English Post-office from making any agreement with that Company. A contract was accordingly made with a Company at Liverpool, in the early part of this year; but prior to my quitting office, in consequence of some dispute between the managers of the Company, I believe, or from some other cause, an injunction was obtained from one of the courts in London, prohibiting the sailing of the vessel about to depart with the mail; and if the agent of the Company had not procured bail, and taken the responsibility on himself, the packet could not have left Hull, and great inconvenience must have arisen to the commercial interests of the two countries. If the system of contract is adopted in every station, my opinion is, that a legislative enactment should be devised, which should prevent the vessel from being so detained upon any pretence whatever.

You do not think the Postmaster-General, binding down the party by all the penalties of which it is susceptible, is sufficient?—I think not; the bond the Postmaster-General might take from the party would not be a bar to an injunction being granted by a court of law.

Do the public in general show a preference to go by a *bonâ fide* Post-office packet, to going by a private packet?—The public prefer going by the King's packets. It will, I believe, be found on inquiry at Liverpool, that the King's packets go to sea frequently when the private vessels remain in harbour.

Was there not a representation, on the part of the merchants of Liverpool, when there was a question as to contracting for the packets from that port?—There was a strong representation, though the packets were established principally with a view to carrying letters; yet still I have ever felt that they should be made as convenient as possible, for the conveyance of passengers: the private packets carry merchandize, and you must be aware that great inconvenience would arise to the public if the Milford, Dublin, and Holyhead packets were to carry a cargo of pigs and cattle.

Has your Grace had representations from gentlemen, of the crowded state of the decks on board vessels carrying the mails to Hamburg and Gottenburgh?—Yes; but when I inquired into the particular complaint that was brought before me, I did not find there was much ground for it.

Those things might be excluded by terms in the contract?—Certainly; but if you were to prohibit these vessels from conveying cargoes, the expense would be very much increased; indeed at present it is very large.

Your objection generally to any proposed change, and the steam-packet service being by contract, is that the restrictions with which you consider it necessary that the contract should be accompanied, would be such as to prevent its being a contract, desirable for parties to undertake?—I think the private vessels would not make the passages with as much speed and regularity as the King's packets; indeed at the present moment there are not, in my opinion, sufficient Steam Companies established, to ensure the necessary competition for the contracts; and if the Government were to adopt the system, and to get rid of the Post-office packets, the Postmaster-General would be at the mercy of the Companies, and would be obliged to give them whatever sum they might ask for the conveyance of the mails. If I recollect rightly,

I only received two tenders for the contract advertised to Hamburg and Holland; I accepted the lowest, which was immediately sold to the other party.

You are inclined to believe that the result of such experiment would not be a reduction of expense to the public?—I think it would not be economy.

Would it not be more certain of success in short passages, for instance at Dovor, where there are a number of private vessels?—The Dovor station consists of the packets to Calais, which are profitable to the Revenue, and also to Ostend; a smaller number of packets perform the duties of both stations, as one packet in reserve is sufficient. I believe that the Post-office packets of England and France, between Dovor and Calais, are a great convenience to the public of both countries, and that the owners of the private packets are prevented from increasing their charges of passage, by the opportunity which is given to every person to select a Post-office packet, if he prefers it. The mail is conveyed to the Isle of Man from Liverpool by contract, and the mail boats in the West Indies are procured by the same means.

The Duke of Richmond,
23d June 1834.

No. 2.

14th March 1835.

Mr. Thomas Lawrence was examined as follows:—

No. 2.

Mr. Thomas Lawrence,
14th March 1835.

The Commissioners wish for an account of the particulars of the expense of a steam-boat; what objection is there to furnishing that?—The Postmaster-General has desired me to bring the papers we have, hoping they may contain sufficient information. There are no means of furnishing the account in the detail desired; we do not keep an account against each vessel. I will show your Lordships a statement, made out by our Accountant-General, for the year 1833.

How does he keep his accounts?—By taking an abstract of the agent's accounts, which are in detail.

Under what system does he keep his accounts; by day-book, or a cash-book?—He has those, of course, as regards the Revenue, but the accounts of the packets he has sent up to him quarterly, and he enters only the general abstracts from the agent's accounts into his books.

Has he not a ledger?—Yes, no doubt; but not containing the account in the detail pointed to by the order.

[The witness produced the accounts of the vessels on the Milford station.]

Is there not a separate account of the expenses of each vessel, and its wear and tear?—In the agent's accounts those are separated, certainly; but as those accounts go to the Audit-office, where the items are all kept, and where they are exceedingly numerous, we should have the greatest difficulty in making out those accounts. A very voluminous account it would be if it could be afforded.

Where are the agent's accounts audited?—They are checked in the Post-office, and incorporated with our general account, and then they are sent to the Audit-office as vouchers to our general account.

You do not keep any account in the Post-office of the detail, or the total charge of each of the several packets, not even as to repairs?—No.

The directions for the expenditure in the construction of the steam-boat, and the terms on which it is to be done, of course proceed from the Postmaster-General?—Yes.

If a steam-boat is ordered and completed, to whom is the bill for the construction of the vessel and her machinery presented?—To the Postmaster-General.

Is that examined in the Secretary's office?—It is.

What is the next step?—The next step would be to send it to the Accountant-General to be examined as to its calculation, then a warrant is formed upon it for the signature of the Postmaster-General to pay the account.

From your experience in the office, how does the Accountant-General treat that?—My account for building the packet would be sent to the Accountant-General to check it as to calculation; he then returns it, if he finds it correct, to the Secretary's office, where a warrant is made out for the payment: when that warrant is paid, the Accountant-General then enters it in his books—the total of the warrant for building the hull of a vessel, the engines for a vessel, or whatever it may be.

In what book does he enter it?—In his ledger.

Has he separate heads in his ledger for the steam-packets?—For packets generally.

Not under the different stations?—No.

As to the practical working of a steam-boat at Dovor, who pays the wages of the men, the coals, the oil, and the *et ceteras*, to put that vessel in motion?—The agent.

How often does he send up his account?—Every quarter.

Is that a detailed account?—Yes.

What becomes of that account?—The Accountant-General enters the general abstract in his books, and the vouchers the agent sends go with the general account to the Audit-office: the vouchers are not entered by the Accountant-General. There is another form of account, which the Postmaster-General thought might answer the purposes of the Commissioners [*presenting the same*]. These statements are made out every year for the information of the Postmaster-General. They are laid before his Lordship, with an explanatory report, of which this is one. [*Presenting one.*]

What is the sailing-packet here referred to?—It is one of our vessels we are not able to sell.

What service does she perform?—She has been employed but very rarely: she is laid up in ordinary.

Examinations.

No. 2.
Mr. Thomas Lawrence,
14th March 1835.

The agent for the packets sending up a general return of the expense for the quarter, the items of that account are not entered in the ledger of the Accountant-General?—They are not; the Accountant-General satisfies himself that the charge in the abstract is correct, by examining the vouchers which contain the items of charge.

Is the captain's log examined in the Secretary's office?—Yes; it comes up every day.

The question refers to the log for his expenditure on his vessel?—The captain makes no entry of that sort.

Do your vessels hoist a pendant?—Yes.

Then they are not examined on going into Calais?—Not that I am aware of.

Do they carry goods?—No.

When were your last quarterly accounts up to?—Up to the 5th of January.

Have they been sent to the Accountant-General?—The Accountant-General has had them; I do not think they are gone to the auditors yet.

Do they go to the auditors at the end of the year?—I believe so; as soon as we can get the general accounts finished for Parliament.

Is all the expenditure of the vessel defrayed by the agent of the packet?—Yes.

Is an imprest forwarded to him for the money?—Frequently.

Is money issued at the Post-office without the signature of the Postmaster-General?—Never; he signs all orders for payment.

Who is the packet agent at Dovor?—His name is Hart.

Is he clerk of the deliveries as well?—He is; he checks them.

Is there a store there?—There are very few things sent from London that cannot be supplied at Dovor-office quite as well,—cordage, and so on. He purchases at Dovor things as they are wanted.

How is that with reference to things wanted for the machinery?—They must be supplied from London.

There must be some articles wanted there; occasionally a crank, or the failing of a screw?—Small articles are supplied in the town; but if there was a failing of a crank the vessel must be brought up to the river; that would not be done there.

Do you keep any store of the particular articles of machinery there, ready for fitting at the moment?—I think there are some duplicate parts kept; but I am not prepared to say what are the particular parts.

The charge at Holyhead for stores is £7,173?—That is a general depôt: the vessels are taken from Liverpool and other stations to be repaired there. Stores of all sorts are kept there.

Are not the accounts kept, like those in a merchant's yard, to show the stores appropriated and worked to each vessel?—Precisely so, in the agent's accounts.

The agent is discharged by the delivery of certain stores to certain vessels?—Yes.

Who is the Accountant-General?—Mr. Court.

After the accounts have gone to the auditors, are they returned to the Post-office?—No.

Do they remain with the auditors?—We presume so; we get our discharge, and there is an end of them.

How are returns made to Parliament for the last few years?—They are generally asked for under general items; not so much in detail.

The Accountant-General's book is only a check on general heads?—Yes, and not upon the particular items.

The Accountant-General could give, under general heads, the whole of the expenditure which has taken place at Holyhead or Dovor?—Yes; these are the very accounts furnished by him for each station. [*Presenting them.*] These could be furnished for any number of years, together with the explanatory report furnished to the Postmaster-General.

Are the harbour dues paid on coming into Dovor, or Calais?—They are paid at Dovor for the French packets. There is a countervailing account, and there has been generally a trifling balance payable to France, their boats being smaller.

Do the steam-boats from England to Guernsey, and so on, carry troops free of charge?—They do.

The general accounts are sent to you?—Yes, accompanied by vouchers.

In what manner does the Receiver-General forward his money to the Bank?—The Receiver-General is no officer of ours; he is an officer of the Treasury.

Then all the money received from the country postmasters, the money of the window-men, and of the letter-carriers, receipts for steam-packets, and so on, is lodged with the Receiver-General?—With regard to the country postmasters, they remit according to the amount of their receipts, and according to the rules laid down for them, either weekly, or every fortnight, or every month. They remit in bills, or in bank-notes, or cash, under cover, to the Secretary. The remittance is entered in the Secretary's office, in a book, distinguishing the bills, and the notes, and cash. That book is sent down with the remittance to the Receiver-General, who, if he finds it correct, signs his initials against each sum. That book is afterwards transferred to the Accountant-General, that he may check the Receiver-General's receipts, in as far as the country postmasters are concerned. A charge is raised against the window-men and against the letter-carriers by their superior officers. One copy of that charge is sent to the Receiver-General, and the other to the Accountant-General, that he may check the Receiver-General. The Receiver-General then debits the officer with the amount, which he pays every second day.

There is an account department in the Secretary's office?—No further than a simple journal of the remittances.

In what book are the accounts of the agents for the packets inserted?—Not in the Secretary's office at all. They come up to the Secretary's office merely for the purpose of inspection, and are then handed over to the Accountant-General.

Examinations.

No. 2.

Mr. Thomas Lawrence,
14th March 1835.

Is there no note taken of them in the Secretary's office?—None.

What is the charge on a ship letter, if delivered in the place where it is landed?—Eightpence.

Then if it has to be sent from the place where it is landed to another place, what is charged upon it?—The inland postage in addition.

You keep an account with the country postmasters?—Only as regards the remittances.

Do they not sometimes make deductions for expenses paid by them?—They make considerable payments, but there is an allowance made in the Accountant-General's office for those current payments, so that they are called upon to remit their net receipts, as nearly as may be, at the regular periods.

Their accounts are sent in to the Accountant-General, and then passed on to the auditors?—Yes.

You do not pay transit postage to any other country but France?—No.

Can you inform the Commissioners as to the system of paying the transit postage, whether the letters are paid for in their transit from this country to Italy, or in their transit from Italy to this country?—We pay transit to France both ways. On the letters from Italy and to Italy we pay a certain charge, according to treaty, for the conveyance through France; so much an ounce.

Does that extend to all countries?—No, not to all countries: we pay transit to and from Italy, to and from Spain, but only one way from Switzerland, and from certain parts of Germany.

Do you pay transit to Holland and Hamburg?—No: Belgium, Holland, and Hamburg forward all our letters without charging us with transit; then the whole of the expense of the steam conveyance to Holland and Hamburg is borne by England.

Can you state the principle upon which the charges of the steam conveyances are made; Are not the charges larger for the shorter passages, from Portpatrick to Donaghadee, for instance, as compared with the passage from Milford to Dunmore?—I am not aware of the principle. I am aware there is a difference. I know that these rates were arranged some six or seven years ago by an Act of Parliament, but I am not aware of the cause of the difference.

The Commissioners have called for an account of the number of persons employed in the Post-office packet service, as agents, captains, engineers, officers, and men?—That is all contained in the report of the Commissioners of Revenue Inquiry. There has been no material alteration since that return was made.

Can you state whether the parties are entitled to any superannuation or retired allowance, and if so, for what period of service?—If they become disabled there is a settled allowance of £150 a-year to commanders when worn out.

Is there an allowance to the widows of men dying in the service?—The widows of commanders of packets, if left in indigent circumstances, have small allowances, not from the Revenue, but from a fund formed of the mulcts of commanders, which they pay when they remain on shore, varying from £15 to £30 per annum, according to the circumstances of the case; but the widows of the men are not entitled to anything, not even if the men are drowned in the service. The Treasury issued a special order upon that point some years back, that as no such allowances were made in the navy, they could not be entitled to it under the Post-office department.

Must a letter going to the West Indies be paid for in this country?—No; not if going to a British Colony.

It must, if going to India?—Yes; we have no means of collecting the postage in India.

Have you any authority over the inland postage in our Colonies?—Yes.

Is the Post-office in Jamaica, for instance, a branch of your office?—Yes.

From an inland part of Jamaica can a letter be sent to London without payment of postage there?—Yes; I believe it can.

In the return made to the Commissioners it is stated there are 5,724 letters returned from France, and that the English Post-office have returned 3,403. As to letters returned from France to England, has that arisen from misdirections, or from persons refusing to take in the letters?—The only way in which we can account for the difference is this,—that so many who travel in France, of our countrymen, do not leave their addresses, or have left their addresses as being returned to England. I have observed a great number of those letters have been so marked by the French office, "Returned to England," and we have been able to deliver very many of those to the parties in England.

Is there any statement of their being refused by the person?—Yes, a good many; but then we don't know the cause; merely "Refusée" being written upon it.

Does that appear to be for want of payment of the postage?—That does not appear.

How does the law stand if a letter were returned from France? In the dead-letter office it is opened; if you find any names and address well known, have you a right to demand the postage from them?—The postage has been previously paid to France. It is opened and put into a printed cover, addressed to the writer, and no postage from France is charged. If there are any letters returned from France for persons whose address can be found out in this country, they are charged with the postage from France, on delivery.

Can you legally enforce the demand?—We cannot enforce the demand.

You have not returned letters from any other country than France?—We have made an agreement with Belgium for that purpose, but have not yet had any sent. Their custom is to keep, as we understand, the letters three months in their office before they return them, and they have not yet made any return to us: we send them to Belgium once a-month.

What would occur in France if letters were sent from Italy directed to an Englishman in Paris, and that Englishman never called for his letters, would they forward those letters to

No. 2.
Mr. Thomas Lawrence,
14th March 1835.

England?—No; they would not send them forward, for they would want the payment of the French postage.

Neither from Hamburg, or Berlin, or Madrid, have you any letters returned?—No; we have no direct communication with Berlin or Spain; with Hamburg we have.

Have you any complaints that letters addressed either to Germany or Spain do not reach their destination?—There are occasional complaints.

No. 3.

T. Lawrence, Esq.
21st March 1835.

No. 3.

21st March 1835.

Thomas Lawrence Esq., was again called in and further examined, as follows :

You have seen some papers, and heard a great deal as to what is called the optional payment of postage to France?—As far as I recollect, they have proposed three different modes, at the option of the parties; the one is, not to pay any postage at all on putting in the letter, the other, to pay the whole postage from hence to the destination, on putting in the letter, the other, only to the frontier, as at present.

Do you see any practical difficulty in such a law being adopted?—The most simple mode would be, not to have a portion only of the postage paid, but I see no practical difficulty in it.

Are you aware that it is a practice adopted through the greater part of Europe at the present time?—I have understood so, but I have no evidence of it.

You see no objection to adopting the first and second of these propositions?—I do not, practically.

And with respect to the third, your objection is, that it is a little more complicated?—Just so.

Would not there be more convenience, if there were but one account to be kept with France?—Although we send only by way of Calais, we have three, if not four different bags, and as many different accounts with France. There is the bag for Calais, for Boulogne, for the Departments of France, and for Paris, and the account is transacted entirely with the head office at Paris.

Then you have an account at Calais, which is transferred to the account at the head quarters at Paris?—The Calais postmaster transmits his account to Paris; we have no account but with Paris.

Although you send four separate bags, and four separate letter-bills?—Yes.

The postmasters at Calais and Boulogne, forward their own separate account to the head office at Paris, which takes in all their charges and payments into their account in settlement with you?—Just so.

Have you any difficulty in settling your account with the French Post-office?—Their accounts are very inaccurate. I hardly recollect an instance in which their monthly account is correct. It was only yesterday, that I sent back, for a second time, an account of theirs for one month.

Is the error to a considerable amount?—No, the amount is trifling, but still the accounts are incorrect. The French send to us, every month, an account between office and office, for our correction, and at the end of three months there is a general account made up by them, and there is always a balance due to France on account of the transit postage.

What is the objection to sending Prices current as newspapers, limiting them to seven grammes?—I conceive the great objection would be, that we should have very few letters; the merchants would not write concerning the prices of the commercial market, if they could send a Price current at a reduced rate of postage.

Is it not possible that it might increase the number of letters, by merchants seeing the prices, and writing for orders?—I think not, for at present the merchants send the notices of the Exchange, or the prices, and the different articles, in a letter that pays postage.

Of course they could not send any speculative opinion as to the probable rise and fall?—They could not in a Price current.

You do not think that giving facility of information of that sort would increase the correspondence?—I do not think so, because that information is now conveyed by the mercantile letters, a great many of which contain nothing but the prices of the market, and many of those are printed.

Might there not be a great increase of the number of Price currents, which, being charged at a moderate postage, would go to make up for the loss upon the letters?—That would depend upon the rate, because if the Price currents were sent for 2*d.* and the postage of a letter be 1*s.* 2*d.*, it would require a great many Price currents to make up the difference.

Can you state any practical result, as to whether in Holland or any other country, the letters are diminished by sending Price currents?—There are none go.

In the Act of the last session there was a permission given to the Postmaster-General to grant licences to forward Price currents?—That related only to certain commercial lists which had been forwarded under the privilege of the clerks of the roads, but not to Prices current generally.

Has he granted any licences for that?—The same parties whose lists were forwarded in this country, by the clerks of the roads, continue to forward them, on payment of a commuted rate as nearly as possible the same as what they paid to the clerks of the roads.

Is that divided among the clerks?—No, it is so much Revenue.

What compensation was given to the clerks of the roads?—They had a compensation taken upon the average of their profits of the last three years.

Are they still news agents?—Not any of them; they have given a solemn declaration that, neither directly or indirectly, have they anything to do with the newspaper trade in any shape.

At what rate do newspapers now go abroad?—They go for 2*d.*, they would go for nothing, if they would be delivered for nothing abroad. We made a proposition to France that if they would deliver English newspapers for nothing in France, and charge nothing for French newspapers coming here, we would let them all go free, and deliver them free.

Are you of opinion that allowing Price currents to go at a small rate would seriously diminish the Revenue?—I think so.

Under any guard?—Under any guard.

For your steam-packet service, are the stores advertised for and taken by public tender?—No.

In whose department is it to select them?—The agent obtains the supplies as they are wanted, at each port.

Have you a boat at Dovor to bring coals?—No, we contract with a person in London who supplies Elgin coals.

Were they taken upon contract originally?—Upon contract; they have had a contract of some years' standing; the contractors are a very respectable house in London, and they have reduced the terms of their own accord, as much, I believe, as 3*s.* a-ton.

Is that a contract for a limited period?—It is terminable whenever we like.

Do you know what you pay at present per ton?—I think at present 23*s.* 6*d.*, delivered into store at Dovor.

How long has that been the price?—I think about two years.

It does not appear that in his accounts the agent gives a return of the quantity of stores in hand in each quarter?—Not in his accounts, but we have a return monthly of the stores of the preceding month, the stores consumed in the month, and the remainder, but that is not done at Dover, because he has hardly any stores in hand; the things that are required are bought of the trades-people at Dover; he has perhaps got a little cordage sent down from London, and that is all.

If anything goes wrong in the machinery, is that replaced by the smiths and people on the spot?—Yes, unless it is something very serious.

Cranks for example?—For cranks they would be obliged to come to London; Bolton and Watt always supplied us duplicates of cylinder covers, piston rod, fire-pump, bucket, rod, and a few braces of various parts; when they furnish an engine, they include in their price these duplicate parts.

And when they are worn out or consumed, you have a fresh supply?—A fresh supply is sent down.

From what documents were the accounts you presented the other day, formed?—They were formed by the Accountant-General from his accounts. There is one account that was not made by the Accountant-General; that was formed from various documents in the Secretary's office.

It appears in this account that the wages and provisions for six vessels are stated at £10,664, which does not at all agree with the amount stated for each vessel in the same account?—I can explain that; we have a large land establishment at Holyhead, there is a regular engineer's work there; a work yard, and 73 men employed there, and their wages are included here. The victualling allowance to the crews is also included. This is quite a rough account, and we were going on to make some explanations. I merely brought this as a rough account, to know whether such an account as this would meet your Lordships' wishes.

At what period was it that you made the agreement with the St. George, or the City of Dublin Company at Liverpool, about passengers, one to take one class of passengers, and the other the other?—I think it must have been about the year 1828.

Was the variation of the prices with the authority of the Postmaster-General?—Certainly.

Do you suppose that there is his written authority for it, to vary the prices from £1. 10*s.* to 10*s.*?—I have no doubt of it.

Sir Francis Freeling says, in his letter to the Treasury, that he entered upon the packet service in the spirit of putting the office upon the footing of private adventurers; have the receipts answered the expectations?—They have not, certainly.

To what do you attribute that, to the increase in expense, or the diminution in fares?—I do not know what to attribute it to, but I know that the receipts have not paid the expenses.

In the estimate of the Portpatrick station, it is stated, in page 57, that that passage would pay its own expenses, do you know the cause of there being a considerable deficiency each year?—I presume it is from the number of private passage-vessels passing between Scotland and Ireland.

Was there ever any application made for a contract to carry the mail between Portpatrick and Donaghadee?—I never recollect any.

Who made the agreement between the Post-office agent and the City of Dublin Company, that the one were to take the cabin passengers, and that the other was to take goods and other descriptions of passengers and cattle?—It was made by the authority of the Postmaster-General.

Was it a written agreement?—I think not.

Have the other party adhered to the agreement?—I believe so.

Do you know who made the arrangement?—I believe it was made by Mr. Freeling and the managing director of the company, Mr. Williams.

Do you mean by Mr. Freeling himself?—I think by Mr. Freeling himself.

Was an offer made by the Post-office to the Government at Belgium, for the interchange of newspapers?—Yes, there was, immediately after the passing of the Act of last session.

Was it a letter from the Secretary?—It was. No reply has been received.

What is the Richmond tender at Liverpool?—She is a small steam-vessel that we employ

Examinations.

No. 3.

T. Lawrence, Esq.
21st March 1835.

for the purpose of putting the mails on board, when a packet is obliged to lay down the Mersey at Walsley Pool, and at other times she is employed in collecting letters from vessels arriving in the port of Liverpool.

Is she ever let out for hire?—She is occasionally hired out to tow vessels.

At how much a journey?—That I suppose must depend upon the length of the towing.

Does the Dutch postmaster still continue to have the power of sending newspapers free to this country?—He does not; I apprehend that he only sent them free as regarded the postage in Holland, but here they would come under the privilege of the Foreign Office, but that has ceased.

To what states were letters sent, with respect to newspapers?—To France, Belgium, Holland, and Hamburg; those are the only Post-offices with which we were in direct communication; but the Foreign Secretary of State was requested to communicate with other countries to which packets go, upon the subject.

Has any such communication taken place?—We have never heard anything further upon the subject.

There was a favourable answer from Hamburg, was there not?—Quite so.

But not from Holland, Belgium, or France?—France declined provisionally. Holland declined it quite, and furnished us with answers they had obtained from Hanover, and I think from Prussia, declining the free interchange.

[The witness is desired by the Commissioners to send a copy of the letter sent to each of the foreign states and of the answers that have been received.]

With respect to the Richmond tender, has it been constantly the habit to let out the tenders in that manner. It has been done from time to time; it is only seldom done.

Could you conveniently do without the tender?—No, we should always be obliged to hire a vessel when the packet was lying in the Mersey, and we should lose a great deal of postage. In the course of the last year, that tender collected as many letters as amounted to nearly £10,000; we found that the letters were delivered at the counting-houses of the agents and the merchants, and we lost the postage.

Suppose a letter is put in the post for New York, it goes by the regular packet from Falmouth?—Yes.

What course does a private individual take, if he wishes it to go for expedition's sake by the New York packet?—If he designates it "By ship *via* Liverpool," that would be sufficient.

Are not the greater part of the community ignorant of that?—All the merchants know it, and that route is very much resorted to.

What is the reason that the newspapers are refused to be taken in at the Branch General Office an hour and a half before it closes for letters?—It is in order that we may get them up the earlier to make up the bags.

Would they be very numerous after that time?—Very, for newspapers are almost always brought at the very last moment.

Is it not inconvenient for those persons wishing to send out evening newspapers?—It is so, but I do not see how that can be avoided.

Do you know what the number of evening papers are that are sent out?—We keep no distinct account of morning and evening papers; we could tell the gross number sent out; by far the greater number of the newspapers for the country come just as the clock is striking six.

Do you know what is the number of newspapers sent?—On Monday perhaps 60,000; on another day 40,000 to 50,000; on Monday sometimes 70,000.

How long will it take a person to sort a thousand newspapers?—I have no idea; it takes much longer than the same number of letters on account of the bulk.

Are not a great part of the newspapers delivered before the end of the day?—By far the greater number come in within the last quarter of an hour.

Might not an additional half hour be given at the great receiving offices?—I think it could not be done without putting us to confusion.

At what o'clock of the day does the sorting begin?—At five o'clock.

Are there not a great many letters put into the Post-office before that?—Not many, everybody delays writing till the last moment. We find, with regard to our Foreign Office, which is kept open till eleven o'clock, that there the greatest crowd is always just at eleven.

No. 4.

T. Lawrence, Esq.
28th July 1835.

No. 4.

Tuesday 28th July 1835.

Mr. Thomas Lawrence was called in, and examined as follows:

What situation do you hold in the Post-office?—Chief-clerk to the Secretary.

How long have you filled that situation?—About 12 years.

Are you well acquainted with the subject of the steam-packet service?—I have had a great deal to do with it.

Will you have the goodness to state what part of that service is done by contract, and what by establishment?—The service of conveying the mails between London and Hamburg and Holland is done by contract; between Liverpool and the Isle of Man is likewise done by contract. The others are done by vessels, the property of the Crown.

What are the others?—Portpatrick and Donaghadee, Liverpool and Dublin, Holyhead and Dublin, Milford and Dunmore, Weymouth and the Channel Islands, Dover and Calais, Dover and Ostend.

Have the communications with Hamburg and Holland always been done by contract?—Previous to 1832, it was done by an implied contract from Harwich by sailing vessels; that

is to say, by vessels introduced into the service, the property of the commander, who was appointed by the Post-office.

Are the steam-vessels that now carry the mails between this country and Holland commanded by officers named by the Post-office?—No.

The Post-office exercises no patronage of any kind with reference to those vessels?—None, excepting the appointment of a man to take charge of the mail, and who is paid by the Post-office.

When was the present system of communication between this country and Holland begun?—It began in September 1832.

What is the nature of the contract?—Of the present contract or the one in 1832?

What was the nature of the contract in 1832?—It was an engagement to convey the mails twice a-week between Holland and London; twice a-week, during six months in the year, between London and Hamburg; and once a-week the remaining six months of the year; and at the discretion of the Postmaster-General the contractor engaged to convey an extra mail during three of the six winter months at a certain extra payment, £150 a-mail; that is during the time the Elbe was considered to be open.

Was that contract submitted to public competition?—It was in the first instance.

Has any alteration taken place in the system, under which this service is contracted for?—Yes, in this way; by the present contract two mails per week during the whole year are conveyed to Hamburg without any extra payment.

For what length of time was the contract entered into in 1832?—For one year certain, and with three months' notice to quit.

Have you gone on with the same contractors since that time?—They have been the same parties, but with a renewed contract.

Who was the first party you contracted with?—The first party was Captain Doran, one of the directors of the General Steam Navigation Company; when tenders were advertised for, a person in London of the name of Gibbs, on behalf of the St. George's Company of Liverpool, tendered to perform the service; and a contract was drawn up and signed by two of the St. George's Company, on behalf of the rest. They came to London, and, for reasons best known to themselves perhaps, they wished to withdraw the contract, and they were allowed so to do. The contract was cancelled; in fact, at that time they had not vessels here to perform the service, and they proposed to do it by means of the General Steam Navigation Company's vessels. Then, upon the annulling of that contract, Captain Doran, on behalf of the Steam Navigation Company, took it upon the terms which the Liverpool people had agreed for in the first place.

What are those terms?—The terms then were £13,350, and the £150 for the extra voyages to Hamburg.

That was the first contract?—Yes? that continued but for a very short time; in fact, there were remonstrances at that time, because there was only one communication a-week between London and Hamburg; the merchants of London remonstrated and the people at Hamburg likewise, and then a fresh agreement was entered into with Captain Doran to take two mails a-week during the summer six months, and that increased the price to £16,000.

And is that the present rate?—The present rate is £17,000, but then there are two mails per week, every week, to Hamburg throughout the year, and two to Holland.

This sum is paid, I suppose, for the mere conveyance of the letter-bags?—For the mere conveyance of the mails and the men in charge of them.

Do they not give the man a cabin to carry the bags in?—They do; and they feed him too, which is no part of their contract, and they have so far acted very liberally.

Has the Post-office reason to be satisfied with the conduct and punctuality of these parties?—Perfectly so.

At the time when this contract was taken by the parties who at present hold it, were there any offers made by any other parties?—Not on the last occasion; tenders were advertised for, and the only offer received was from the General Steam Navigation Company; that Company has recently become incorporated, and therefore it tenders itself as a Company; formerly Captain Doran, as one of the partners, was the only person who could accept the contracts. On the first occasion of the contract, in 1832, there were four offers.

Has the contract been re-opened to public competition?—It was, last year.

Had you any tenders at that time from any other parties?—Not one.

In the event of the principle of a contract being substituted for that of establishment in any of the other lines of steam-packet communication, do you imagine there would be any difficulty attending companies coming forward to supply boats?—I should apprehend that, excepting at Dover and Liverpool, the thing could not be done.

For what reason?—Because, on those stations, the number of passengers would pay, and on the other stations, the passengers are so very few that it could never answer to the parties, as the receipts would not meet the expenses.

Of course, on those stations where there were few passengers, the Post-office establishment must be more expensive?—Undoubtedly so.

More so than in those places where there are passengers?—Certainly.

Then, of course, any companies undertaking to furnish packets on such stations, would require higher prices than on those stations where there was a probability of carrying passengers, would they not?—I should presume they would not work their vessels at a loss.

Do you imagine that, provided a proper price was paid, there would be any difficulty in finding companies to undertake the duty?—I should imagine if expense is no object, that companies could be found.

The Dovor packet is not by contract, is it?—No.

Examinations.

No. 4.

T. Lawrence, Esq.
28th July 1835.

That packet waits and starts at any hour that suits the convenience of the mail, does it not?—Yes; from this side.

If you had the packets by contract, could you make the packets start at your own hours; do you make the Hamburg packets start at any hour you like?—They are generally regulated by the state of the tide in the river. The contract is to go as soon as the mail is put on board, or as soon as possible after the mail is on board; but the tide and navigation of the river is very uncertain.

Have you the power of detaining a packet between this country and Holland, if you wished to do so; to stop it for an hour or so?—Certainly.

For the sake of the mails?—We have done it for the despatches of Government.

What is the present state of the Post-office steam-boat establishment at Dovor as to number?—There are five packets employed; that is, for the combined service of Ostend and Calais.

What is the annual expense of that establishment?—I cannot speak from memory. It has, on many years, more than paid its expenses.

There are boats at Dovor also by a company, are there not?—There are several private steam-boats.

That cross every day as well as the mail boat?—Yes; both to Calais and Boulogne, but none to Ostend, I think.

Are you able to state at the present moment, that the steam-packet establishment at Dover more than pays its expenses?—I think it would not this year, for we have been at considerable expense in altering vessels.

But, taking an average of the last few years, have you any doubt such is the case?—We have even received remittances on account of the revenue from Dover.

Can you furnish the Commissioners with a precise statement on this subject?—Certainly.

Under whose control are the Dovor packets now directed; who overlooks them?—There is an agent of the Post-office at Dovor; an agent for the packets.

How is he paid?—By salary.

Who contracts for coals and stores, and other things necessary for the steam-packet service, on the Dovor station, for instance?—The Post-office contract with a house in London for the supply of the coals there; and such things as are wanted in the shape of smaller stores are supplied by trades-people at Dovor.

Who manages and controls that part of the expenditure?—The agent; the captains make the requisition to him for certain stores, as they want them.

In what department of the Post-office are his accounts checked and superintended?—Mr. Freeling generally examines the accounts; the accounts come up quarterly, and he sees that there has been no improper expenditure, or that things have been duly authorized.

Is your agent at Dovor a practical seaman?—No; he is not.

Have you any professional authority at the Post-office, to whom subjects of this kind are referred?—No seaman.

In point of fact, Mr. Freeling is the only person who superintends that part of the public service?—Just so.

Who appoints the captains of those vessels?—The Postmaster-General.

And all the inferior officers?—Sometimes the mates, but they are generally seamen, generally, or indeed, always of the packet service who have conducted themselves well.

What is the salary of a captain of one of these packets?—They vary on all the stations.

Can you furnish the Commissioners with a return of the salaries on the different stations?—I can mention them.

Do so?—Dovor and Ostend £400 a-year; the three senior commanders on the Dovor and Calais stations were formerly in possession of the sailing packets, which were their own property, and of course the situations were very lucrative ones, and on the introduction of steam-packets they were allowed a per centage on the gross receipts of that station, by way of compensation to them for the loss they sustained, in addition to the £400 a-year.

And which they now enjoy?—There happen to be three remaining.

And is it confined to them?—It is confined to them; as they die off the per centage will cease.

What is that per centage?—It amounts, one year with another, to about £300 a-year.

What is the per centage?—It is calculated in this way: if the gross proceeds are under £10,000 in the year, they are allowed 10 per cent.; if it is above £10,000, they are allowed 9 per cent.; it is as nearly as possible between £10,000 and £11,000 a-year, one year with another.

Have the goodness to state what are the salaries received by the officers on the other stations?—Weymouth £280 a-year; Milford £300 a-year; Holyhead there are two at £500 a-year, and the rest at £400 a-year.

Are you aware of the reason why there is so great a disproportion in the salaries of officers commanding steam-packets on different stations?—It was with reference to the rank the stations held on the service; the emoluments of some stations were always smaller than others.

Are the vessels of a different class and description which they command?—They vary as to size, but that has no reference to the salary.

What are the qualifications necessary to be appointed a captain of a Post-office packet?—The greatest part of them have been officers in the Royal Navy; the others have been brought up, I think, with one exception, in the packet service, and promoted.

How do they go into the packet service at first—as what?—Many have gone in quite as lads—as boys in fact, before the mast.

Who controls the receipts of the money received from the passengers?—The agents at each post.

Are the captains answerable?—The captains are answerable—they furnish the agent with a daily bill.

How can he check that daily bill if they give in a wrong number of passengers for instance?—The bill is made out by his mate, or the steward on some stations, the captain signs that, acknowledging it to be correct.

What does the steam-packet establishment at Holyhead consist of?—Six steam-vessels.

Which ply between that place and Dublin?—Yes, twice a-day.

Can you state whether that establishment has, or has not paid itself?—It has not latterly.

What has been the loss to the public of late years?—I could furnish that, but I cannot state it from memory.

Is there any private Company there which enters into competition with the Post-office — Not any—not even a passage-vessel.

What is the establishment at Liverpool?—Four steam-packets.

Does that establishment pay itself?—Except when there are some very heavy repairs it clears itself.

Are there private establishments that enter into competition with the Government establishment at Liverpool?—I will not say they are in direct opposition—but they sail on the same line.

What is the establishment at Portpatrick?—Two packets.

Does that establishment pay itself?—No, it does not.

Is the loss considerable upon that establishment?—It is not very great; but the passengers are very few there.

What is the establishment at Weymouth?—Three packets.

Does that establishment pay itself?—It does not.

What is the loss?—It is not a very great loss, but I cannot speak from memory.

The only one that does pay itself is Dover?—Yes, that is the only one that has paid itself.

You state you contract for the conveyance of the mails to the Isle of Man?—Yes.

What is the date of that contract?—I think it was made last year.

Who are the parties with whom that contract is made?—The parties are a steam-vessel company in the Isle of Man, the Mona's Isle Company.

Do you remember what is paid to that company?—£850 per annum.

How often do the mails go?—They engaged to convey mails between Liverpool and the Isle of Man, twice in every week, all through the year, but in the finer seasons they go every day and they carry our bags without any extra charge.

Are you acquainted with the boats of the private Companies that ply between Liverpool and Dublin?—No, I am not.

Are the commanders of the Post-office steam-packets entitled to any pension or superannuation?—Yes, from £100 to £150 a-year, when worn out or disabled. It is a very old rate of allowance.

Have they any other source of emolument whatever except their salary?—The Liverpool commanders have an allowance for every passenger they take;—an allowance of 2s.; but for that they find the attendance in the cabin, both male and female stewards, and they keep the cabin small stores in repair—such as crockery, knives and forks, and towels.

Is that the only source of emolument they possess?—That is the only source of emolument.

In the other establishments the captains possess no source of emolument exclusive of their salaries?—None.

Is it the custom in the Post-office to promote captains from the less lucrative, to the more lucrative stations?—There have been instances of it,—with regard to emolument of the Liverpool commanders, I do not think I have mentioned their salary, but it is £400 a-year.

Do you happen to know what the captain of a steam-boat belonging to a private Company generally receives?—I do not.

Do the vessels on all these stations go all the year round?—All the year round—I do not mean daily; at Weymouth they only go twice a-week.

Is a regular account kept at the Post-office against every vessel belonging to the establishment?—No.

Have you no means at the Post-office of making up such an account in case it should be required?—Against each vessel?

Yes.—I doubt it; I do not think we could. The tradesmen's bills are so mixed up on the different stations, that I do not think it could be made out.

But there is a regular account against every station kept?—Yes, certainly.

What is the mode of providing for the victualling of the steam-packets?—It is done by contract at the different ports where they are victualled; they are not victualled at all ports.

Are those contracts sent up to the Post-office in London to be approved of?—Yes, every year.

Are they before they are entered into?—Yes, before they are entered into; they are submitted to the Postmaster-General in all cases before they are entered into.

Is there any person at the Post-office who is a competent judge of subjects of that nature?—The lowest price is generally taken; we can see by comparison at the other stations whether the price is moderate or not.

How are the steam-packets repaired in case of damage?—If the damage is anything very material such as, for instance, at Dover, they are brought up to London; on the other stations they are generally sent to Holyhead.

Has the Post-office any dock-yard of any description at Holyhead?—A considerable establishment of that kind; both for the repairs of the vessels and the machinery, and for making boilers.

Examinations.

No. 4.

T. Lawrence, Esq.
28th July 1836.

Is there a similar establishment in London?—Not belonging to the Post-office.
 Where are the repairs done in London?—They are made by a ship-wright on the river as far as the vessel is concerned; and Messrs. Bolton and Watt do the repairs to the machinery.
 Who controls the expenditure incurred in the yard of that shipwright?—The commander of the vessel who has been in charge.
 What is the name of the shipwright?—Fletcher and Fearnall, of Limehouse, have lately done our repairs.
 Is there anybody at the Post-office competent to judge of the propriety of the charges incurred in repairing a vessel?—The commander is consulted on the subject, and most of the work, if it is a job of any magnitude, is done by estimate.
 Are you not obliged to depend almost implicitly on the commander to control the expenditure incurred in the shipwright's yard, which you have described?—Certainly.
 In point of fact you have no professional adviser at the Post-office to whom you can refer in cases of difficulty?—None: if it is a case of difficulty, it has been the practice to refer it to some of our agents who are professional men.
 You have stated you have got a dock-yard establishment at Holyhead?—Yes.
 Under whose management and control is that establishment?—The agent for packets on the spot.
 What does the establishment consist of beside the agent?—It consists of an establishment of boiler-makers, smiths, and ship carpenters; there are 60 or 70 persons altogether on the establishment or more than that; I should say at least 70.
 For the expense incurred at the establishment at Holyhead, are you obliged to depend pretty much on the agent and commander of the vessel?—On the agent we depend entirely there.
 Is the agent at Holyhead a man of any professional knowledge of such subjects?—He was brought up in the packet service; he had been a commander in the packet service, and is a singularly clever man.
 What salary do you give the agent at Holyhead?—It is mixed up of salaries and expenses; I think the salary is about £380, and there is an allowance made for assistance; he has two situations, he is agent and postmaster.
 In case a new vessel is wanted, how do the Post-office proceed?—The last vessel that was built, was built by the Admiralty in the Kings dock-yard.
 Was that that a steam-vessel?—Yes the "Gulnare."
 Has that been the usual practice?—No, formerly it was done by tender from private builders.
 You have never repaired the steam-boats which may come into the river to have anything done to them at the Admiralty yard, have you?—Never.
 Does it strike you there would be any objection to any repairs that are required in the river, being done in one of the Admiralty yards?—I conceive that we do them cheaper, at least if I may judge of the price and cost of building vessels by the Admiralty.
 Were the vessels which you allude to as being built by contract, built cheaper than those built by the Admiralty?—Yes, by contract.
 You find you can build vessels cheaper by contract than they could be built for you in the Admiralty yard?—Certainly, and very much cheaper.

No 5.

T. Lawrence, Esq.
14th March 1836.

No. 5.

14th March 1836.

Thomas Lawrence, Esq., was called in, and further examined as follows:

You have stated before to the Commission, that a regular account is kept at the Post-office, of everything that occurs in the different Packet stations?—What kind of an account.

A regular account of all the stores and expenses of every sort?—We have returns, but we do not keep an account.

Since you have stated that to the Commission, are you aware of any irregularities which have occurred?—We learn that irregularities have occurred, from the reports that we received through the Commissioners.

Have you had any means of checking them?—I think not.

Do you mean to imply from your answer, that you do not conceive that the present system of general control over the accounts at the Steam-Packet station affords to the Post-office the means of knowing whether negligence or malversation does exist, or does not?—We thought they would afford the means, but it appears they do not.

What description of return has the Post-office been in the habit of receiving?—A monthly return of the stores which are stated to be on hand—a return of the expenditure in the month, and what remains on hand.

In what way was the Post-office, in the first instance, aware of the quantity of stock it had?—I presume, from the first monthly return they received, the return I allude to is of this nature; there is a statement of the stock in hand at the beginning of each month, or at least what was stated to be the stock in hand; a statement of what was received during the month, of what was expended during the month, and what remains on hand at the end of the month.

But then it would appear, if, in the first instance, the Post-office had been correct in knowing what stock they had, their account must have been correct?—That ought to appear certainly, but the Post-office took these returns to be correct, and did not check them.

Was any periodical survey ever made, on the part of the Post-office, of the stock in hand?—No; the Post-office presumed that the returns were correct, as made by their agent.

Now in the case of iron, for instance, at Holyhead, did you receive any account of the

receipt or expenditure that took place?—No more than what was made in these returns. We can furnish the returns to shew the nature of them, if you please.

Was the Post-office aware of any permission given to sell any part of their stores out of the dock-yards, to other persons at Holyhead?—The Post-office was aware of it. A return was made of such sales. Upon these monthly returns there was a memorandum appended to them of stores spared; and in the store account, at the end of each quarter, there was a memorandum of those stores, and their value, and credit was given to the Post-office for the amount.

But the Post-office was not in the habit, in any way, by survey of their own, of checking that?—No.

Has your attention been called to the inaccurate manner in which the accounts of these spared stores appeared to have been kept?—We were not aware that they were inaccurate.

But lately?—Yes, from the reports of the Commissioners.

Does it appear, after reading those reports, that abuses have prevailed in that system?—There can be but that inference.

Do you happen to be acquainted with the manner in which the accounts of His Majesty's naval yards are checked at Somerset House by the Admiralty?—Not in the least, except what Mr. M'Knight has explained to me, but not previously.

In point of fact, the only substantial check which appears to have been exercised over the whole receipt and expenditure of the Steam Packet station, seems to have been an implicit confidence in the integrity and vigilance of the resident agent?—Precisely so, we had no other check.

And that is the only check, in fact, that the Post-office has had at any of the other stations?—Yes.

For instance in the issuing of stores, who did you consider the responsible person at the station; was it the store-keeper or the agent?—The agent I should have conceived was the responsible person certainly.

You conceive the agent to be generally responsible for the whole good management and regularity, in the conduct of the business of the Post-office at the station?—Certainly.

The agent gives a bond, does he not?—Yes.

The store-keeper does not?—No.

You mentioned in one of your answers to the Commission, that vouchers were sent up to the Accountant-General?—That is for the expenditure; I mean for the bills paid; the bills from tradesmen and so on, with their receipts; that is what I meant by the term "vouchers."

It appears from Mr. Goddard's evidence, that he did not consider himself responsible, either for the issuing of stores, for the receipt of stores, for the quality or the price of stores, nor in short for any account in the Dock-yard; do you conceive that any agent could be justified in making that assertion?—I own I was surprised at it when I heard it.

Had he ever made such a declaration to the Post-office?—I am not aware of it.

Is there any officer connected with the Post-office, who has any practical experience of the management of a yard, so as to be able to form an estimate of the quantity of stores that are likely to be wanted in the department of the General Post-office?—I am not aware of any; it has always been left with the agents, who ordered the stores as they were wanted.

And there is no officer connected with the General Post-office, who has any practical knowledge upon these subjects?—No more than what Mr. Freeling may have acquired, since the Packets have been under his cognizance. There is no one who has been brought up to the business.

Did anybody connected with the Post-office, periodically make visits to this station?—Not anybody.

Did you ever remember an instance of any official visit made by any one connected with the Post-office to Holyhead?—I do not recollect, but I think it was before the steam-packets were there; Mr. Freeling went down to make an inquiry there—it was some dispute.

Who pays the coal contractors at the yards?—The agent.

If a contract is entered into at one of the stations, is the previous sanction of the Post-office necessary for that contract?—It is always done in case of contract.

But the Post-office does not insist upon a contract?—It does not.

Are the contracts ever made by open tender?—Yes, in the instance of victualling, the agent gets tenders from the different tradesmen in the town, and for coals likewise.

Is that done by open tender?—Yes.

At Holyhead none of these stores are supplied by open tender, are they?—Not any, as far as my memory carries me.

Who opens the tenders at Liverpool?—The agent, and transmits them to the Post-office.

When you talk of open tender at Liverpool, do you mean that it is absolutely open to the whole trade?—Not by public advertisement, it is limited. I beg to correct my answer; it is limited to a number selected by the agent of the principal tradespeople in the place.

At Dover for instance if they want coals, are they taken by a tender of the same description?—We have had a running contract there for some years; it is with a house in London; they have reduced their terms considerably during the period, but it is a running contract, and has not been thrown open for some years.

Examinations.

No. 6.
G. H. Freeling, Esq.
13th July 1835.

I am aware of; I believe that several of the clerks of the inland office are concerned in private business, but unconnected with the Post-office; some are stock brokers, others are merchants in houses. I am not aware of anything in any way directly or indirectly connected with the Post-office, except the Money Order-office.

Have any of the officers connected with the Post-office contracts or engagements relating to the business of the Post-office in any way?—I think I may venture to say, certainly not; that no officer of the department would be allowed to be in any way connected, or have the slightest interest direct or indirect in any contract whatever for the public service.

Is it not the case, that a clerk of the Post-office is at this moment interested in an engagement to light the mail coaches out of London?—The chief clerk in the mail coach office does supply oil for the lamps which was stated in a report from this office to the Commissioners about the mail coaches. The Postmaster-General stated in that report that in principle it was decidedly objectionable, and it would never have been consented to if it had been known at the time. It was not known until many years after its existence and the question was submitted to the Commissioners, whether it should not be discontinued, if they thought it objectionable, immediately, and that it was at all events the intention to put a stop to it as soon as the present holder was out of office.

Are you quite satisfied that nothing of a similar kind prevails in any other department of the Post-office?—I think I am warranted in saying nothing whatever; I certainly should have proposed to put a stop to it if I had been aware of anything of the kind; but perhaps the most satisfactory way will be to obtain a declaration from every clerk, and every person employed in the service, whether he is concerned directly or indirectly in the supply of any article for the public service.

Do you not conceive that the right system on which a department like the Post-office should be conducted is this, that no individual connected with it should derive emoluments of any sort, either by fee, gratuity, or private speculation connected with the Post-office, otherwise than the salary which he is paid for his services?—I cannot answer that question in the direct affirmative simply with reference to the window clerks of the inland and foreign offices, because they receive a fee for credit given to the merchants on their own risk, which the Post-office does not recognise; if you take away that system of giving credit it would be considered a great grievance by the merchants and others; and at the same time it would be very objectionable for the Post-office to put itself into the situation of giving credit to individuals—with that exception I agree entirely.

You are of opinion that the window men ought to constitute the only exception to the rule which has been laid down?—The letter carriers, would you go so far as that?

Yes—Upon the same principle that credit is given by the window men, that principle would extend to the letter carriers, a great part of whose income is derived from gratuities from the public for the credit they give to the houses at which they leave letters at their own risk.

Explain what the credit given by the window men is.—I believe there is no fixed credit: it is accommodation of different kinds, some merely call for their letters and have them kept there, paying every day, others paying alternate days; some, I believe, once a week, others perhaps once a month; but that is a matter of arrangement between the window men and the public, the charge varies according to the extent of accommodation given.

They charge a sort of per centage?—No, it is not in the nature of per centage I think, the highest rate is two or four guineas, it appears in one of the returns before the Commissioners.

Besides that, are not the letter carriers allowed Christmas gratuities for giving credit?—They receive all or most of them, I believe, Christmas gratuities.

Do you not conceive that upon principle to be very objectionable, as giving them a temptation to act differently towards those who give and those who do not give gratuities?—On general principle, I should certainly say the sooner every extra payment is abolished the better; I ought perhaps to state that in many instances, these gratuities, or by whatever name they may be called, are in the nature of a commutation; instead of the letter carrier taking the pence upon the letters tendered to him when ringing his bell to which he is entitled, he for a certain sum per annum calls at the houses for the letters; such a payment is more in the nature of a commutation than a fee.

Are there any other persons connected with the Post-office, besides the window men and letter carriers who receive money in any shape or manner from the public besides their fixed salaries?—The return now before the Commission will show the whole, and they will judge whether the emoluments from the packet shipping list are to be considered as a fee; they appear under the head of the Secretary's office.

Who receives the emoluments from the shipping list?—There are fees also on deputations.

What is the meaning of that?—Fees on making out the commissions of postmasters.

Who receives those?—They come into the fund of the Secretary's office.

They are paid generally on account, they do not go to any individual?—They form part of the general fund out of which £750 is contributed to the revenue.

Then part of the fees you have mentioned does go to individuals?—Perhaps I shall best explain it by saying that the publication of this list and these fees on postmasters' commissions form a fund which is divided among the clerks in the Secretary's office, out of the produce of which fund £750 a-year is paid to the revenue.

What becomes of the balance?—Divided amongst the clerks.

Do you not think it better that the whole should be placed to the account of the general receipts of the Post-office, and that the clerks in the Secretary's office should receive whatever salary is thought adequate to their employment?—As a general principle I should say certainly, but the fees I believe form a small portion only of this fund; as to the publication of

the lists I hardly see how the Post-office as a public establishment could take that upon itself.

Why not?—It is in a great measure a commercial list, requiring all the necessary machinery of a printing establishment, agency and numerous private accounts.—I am not in any way interested in it; I would suggest, that the Commissioners should examine the chief clerk or person who has the management of it.

On a general principle you think sums of all descriptions would be better received into the revenue, and all sums that are required for the payment of persons shall be paid out of it?—Certainly.

In the answers which have been given from the Post-office as to how far the recommendations of the Commissioners of Revenue Inquiry had been acted upon as regards the special missions which have been undertaken by the assistant-secretary, you state that they have never been undertaken without being authorized by the Treasury?—The mission to France in 1814 was with the full concurrence of Government; as to the mission to the West Indies in 1819, I am not certain whether Lord Chichester had any communication with the Treasury.

State whether these missions were formally authorized by the Treasury, or whether the authority you speak of was merely a verbal communication?—The authority for the mission to France was most decidedly official.

Was it formal?—In formal concurrence with the Secretary of State.

Any writing?—I believe in writing, that is easily ascertained.

What the Commissioners wish to know is, whether before incurring any extra expense of that kind, it has been the habit of the Post-office to get a formal authority from the Treasury for incurring such expense?—There have been only two instances in which such expense was incurred, the mission to France 20 years ago, and that to the West Indies 16 years since. The mission to France was settled between the two governments.

Was the formal authority of the Treasury obtained before that expense was incurred?—As far as regards the mission to France, either the authority of the Treasury or the direction of the Secretary of State for Foreign Affairs, which of the two I cannot speak to, but it is easily ascertained.

The duties of the secretary of the Post-office are both ministerial, and those which imply the exercise of a general control to a very great extent, are they not?—They must be in matters requiring immediate attention. I should say the general duties of the secretary are principally initiative as well as ministerial. Many of the letters received there is no necessity to put before the Postmaster-General; simple inquiries, complaints of overcharges, or letters mis-sent, or other ordinary matters, those are answered at once as well by the secretary as by anybody else; in all other matters, perhaps I should not say of importance, but minor matters, inquiries are instituted in the first place by the secretary, and when they arrive at a certain stage they are brought under the consideration of the Postmaster-General.

In case of the absence of the Postmaster-General, do you conceive the general control over the whole virtually vests in the secretary?—Certainly.

And the same course as to the discharge of the ministerial functions of that office, they rest in the secretary?—Yes; but there is not a single day in which there is not a communication with the Postmaster-General whenever he is absent. If the Commissioners will have the goodness to look at the books, they will see at once, taking any one subject, the whole course of duty more clearly than can be explained verbally.

Do these communications between the secretary and Postmaster-General, in case of absence of the former, frequently give rise to discussion?—Perhaps I cannot make a better answer than by giving the detail upon any one point of business; say, for instance, the establishment of a post in any particular quarter. The application being made in the first instance to the secretary, or to the Postmaster-General, the secretary refers it to the surveyor of the district for his consideration, to see whether the accommodation required can be given consistently with due regard to the general interests of the local correspondence and to the expense to be incurred in carrying it into effect. The surveyor, from his local knowledge, or, if it should be necessary, from personal inquiry, or from accounts which he may order to be kept, reports his opinion upon the application, which comes back to the secretary, who either directs further inquiries if he thinks any point has been omitted, or expresses his opinion either for or against—whether it is in accordance with that of the surveyor or not—stating his reasons for acquiescence or disagreement. This is done in the form of a report to the Postmaster-General, and the application, the surveyor's report, the secretary's reasons, and all the papers are submitted to the Postmaster-General, who forms his own judgment from the whole, and, in case of a difference, decides whether to adopt the view taken by the secretary or that of the surveyor.

Must it not frequently happen that it is productive of great inconvenience that there should not be an opportunity of discussing questions of that kind between the Postmaster who is to decide and the secretary and other officers connected with the establishment?—In such cases as I have mentioned there is no necessity for reference to any other officer upon the establishment; the surveyor being the local officer, is the only one who can have anything to do with it. There are many points upon which a personal discussion certainly is of advantage, and it is the constant practice; but there is one very decided advantage in the present mode of doing business, that the reasons for everything are recorded, which would not be the case if done wholly by personal discussion.

Is a regular record kept at the Post-office of what takes place when the Postmaster pays official visits to the Post-office?—Minutes are made upon the papers that form the subject of discussion. In almost every instance the Postmaster-General puts his name or initials to the memorandums as a record that the subjects have been considered.

Examinations.

No. 6.

G. H. Freeling, Esq.
13th July, 1835.

Are those memorandums regularly kept at the Post-office?—Certainly.

Several of the officers who have been examined have mentioned the subject of the Postmaster-General's order for the payment of money; are all orders signed by the Postmaster-General?—No money whatever can be issued, however small the amount, but under a warrant signed by the Postmaster-General, checked and countersigned by the Accountant-General.

How do you obtain the signature of the Postmaster-General on all occasions?—Most of the payments are for services duly authorized, and there can be no question about them. The warrants are made out in the secretary's office, but no warrant is prepared for the Postmaster-General unless supported by the signature of the head of the department in which the service has been performed, that the charge is correct, and certified also as to calculation by the Accountant-General.

But a great many payments may be very small; in those cases does the Postmaster-General sign every order?—For everything.

Not a shilling of money can be paid without his order?—No; except for the return of overcharges and ship-letter gratuities, which are paid at the window; but with that exception, nothing whatever can be paid but under the authority and under the signature of the Postmaster-General.

Does the Postmaster-General leave blank signatures?—Never; I never saw a blank warrant in my life.

But in case of absence of the Postmaster-General, does not the necessary delay in procuring his signature produce inconvenience?—There is no payment that could be at all prejudiced or affected by the absence of the Postmaster-General; for, as nothing can be paid but under his authority previously obtained, when any application is made, such, for instance, as landing despatches, or any continental payment, the warrant is never prepared until the application is first laid before the Postmaster-General, and his instructions are received. Then the warrant is sent forward, with the authority signed by the Postmaster-General, and paid upon the party's receipt.

But surely, in case of absence of the Postmaster-General, that must delay the warrant and the consequent payment for some period of time?—There are no payments at the Post-office in respect of which it would occasion any inconvenience. Most of the warrants are for quarterly or periodical payments. Any contingent or unforeseen demand for money is of rare occurrence.

But in the case you have mentioned of landing back (bags of) despatches, if the Postmaster-General was absent, it surely would delay the payment of that service for some period of time, would it not?—There must be time for inquiring into the correctness of the claim, and the extent of the further delay would be two days, which certainly is not of very great consequence; and I apprehend the Post-office payments are more prompt than in any other public office. It has never been the cause of complaint.

Does the Postmaster sign his name twice to a payment; once upon the warrant, and once upon the order?—The report or minute upon any description of claim would be sent to the Postmaster-General in the first instance for his directions, and if he approve of the application, the warrant is made out, which he signs also.

Has the Postmaster-General ever any communication with the heads of the department, except through the secretary?—The Duke of Richmond and Lord Maryborough had constant communication with them, and Lord Conyngham followed the same course, I may say for some years. Now the Postmasters-General have been in constant communication with every class of the office, from the highest to the lowest; the Duke of Richmond and Lord Maryborough were in the habit of seeing people at their own houses, or here, of all grades; letter-carriers, clerks, and heads of offices; Lord Lichfield received a deputation from the letter-carriers a few days since.

You have stated that a regular record is kept at the Post-office, of final proceedings and of instructions given by the Postmaster-General when he attends at the office?—Certainly.

How long has that system been established?—There is no record in the shape of a journal that the Postmaster attended such a day and did such and such business; the records are upon the papers themselves that are brought before them.

There is no general record kept of the attendance of the Postmaster-General, and of his official proceedings and instructions on the occasion of such attendance?—There is no general record of the Postmaster-General's attendance; he comes to the Post-office, transacts his business, papers are discussed, and warrants signed, and his decisions are noted on the papers laid before him, or separate minutes made if necessary.

Beyond the memorandums that are to be found upon the papers themselves, there is then no general record kept of the proceedings of the Postmaster-General?—These memorandums are the Postmaster-General's minutes, and every one is recorded in the minute books; if you will allow me, I will get one of the books and shew you.

[Mr. Freeling produced one of the books in which were entered the proceedings of the Post-office, and explained the manner in which memorandums were made when the Postmaster-General was present.]

Who is the comptrolling officer of the Post-office in Ireland?—Mr. Godby is the secretary.

Who is the comptrolling officer?—He reports to the secretary here, who forwards his reports to the Postmaster-General in the same way as he does those of a surveyor, with his observations upon them—they all go before the Postmaster-General.

In point of fact anything that requires immediate decision must be decided by the secretary at Dublin?—Certainly.

What is the case at Edinburgh?—The same.

Is there a secretary also there?—Yes, Sir Edward Lees.

These secretaries have the control of the whole of the local establishments of Dublin and Edinburgh?—Yes, but they cannot remove or appoint.

They can suspend?—Yes; reporting they have done so. With respect to the letter-carriers they have a larger power; if there is any well-founded complaint they can remove them, but it is almost always I believe reported, before they are dismissed.

Does the authority of the secretary extend over Scotland and Ireland?—Yes,

No. 7.

21st August 1835.

George Henry Freeling, Esq., was called in and examined as follows:—

Will you have the goodness to state to the Commissioners whether the communication by the steam-packets at Portpatrick has, of late, been continuous and regular?—I have got a return, showing the impediments to the steam-packets sailing in due course between Portpatrick and Donaghadee for the last three years, which perhaps I had better put in, because that will give the Commissioners much better information than can be given in any other way. I find by this return that, in the year 1832, there were eight days on which the packet was prevented from making her passage in due course from Portpatrick. In the year 1833 there were nine days in which it was prevented from making the passage in due course: but in the year 1834 there was one day only in which it was prevented sailing in due course. The paper will show the reasons in each case of impediment.

(The following paper was then delivered in and read.)

PORTPATRICK STATION.

A Return of the Days on which the Packets have been prevented Sailing in due course to Ireland, and from Ireland, with the cause in each case for each of the three years, 1832, 1833, and 1834, ending the 5th of January, 1835, respectively.

TO IRELAND.			FROM IRELAND.		
Date.	Cause of the Packet being prevented from Sailing.		Date.	Cause of the Packet being prevented from Sailing.	
1832, Jan. 24.	Not able to proceed in consequence of heavy gales and high sea.		1832.	Nil.	
Feb. 4.	Do.	do. do.			
5.	Do.	do. do.			
Mar. 9.	Do.	do. do.			
17.	Do.	do. do.			
Nov. 29.	Do.	do. do.			
Dec. 2.	Packet sailed in due course but obliged to bear up for Lochryan, in consequence of a heavy gale, and carrying away yards and sails.				
	3. Packet sailed, but obliged to bear from stress of weather.				
1833, Feb. 11.	Not able to proceed in consequence of a tremendous heavy gale.		1833, Dec. 31.	Not having arrived in Donaghadee before 5h. 30m. p.m. in consequence of a very heavy gale, and unable to return, the gale not having abated in time.	
Nov. 6.	Do. heavy gales and squalls.				
23.	Do.	do. do.			
27.	Do.	do. do.			
29.	Do.	do. do.			
Dec. 5.	Do.	do. do.			
	11. Packet sailed in due course, but obliged to bear up for Port Nessock in consequence of heavy gales.				
	17. Not able to proceed in consequence of heavy gales and squalls, with a high sea.				
	20. Do. do. do.				
1834, Dec. 8.	Not able to proceed in consequence of heavy gales and squalls.		1834, Dec. 1.	Not able to return in consequence of heavy gales.	

Is that a greater degree of irregularity than generally takes place in other Post-office stations?—Certainly; the number has been greater on that station than on any other station.

To what do you attribute that greater degree of irregularity?—The channel is very bad, and the harbour is rather difficult under certain circumstances of the weather.

Is not the power of the steam-boats one of the reasons to which you would attribute that delay?—Certainly; and I must also state that which the Commissioners know better than I do—that the harbour at Port Patrick is not yet finished, so that it can scarcely be said to have had a fair trial; the new light-house is to be completed this year, which will be a very decided advantage during the winter, for the packets have at times great difficulty in being led in by the best lights we can give them from the shore; but that will be prevented when the light-house is completed.

Examinations.

No. 7.
G. H. Freeling, Esq.
21st Aug., 1835.

It has been represented to the Treasury, in several memorials from the mercantile interests of Glasgow, that Cairn Ryan would be even a more convenient station for the Post-office on the south coast of Scotland than Port Patrick. Has that question ever come under the consideration of the Post-office?—I think there was, not long back, a memorial bringing that question under the consideration of the Post-office, and that the Postmaster-General felt the proposal for the removal of the packets was more for the Government than for the Post-office; the distance by sea being so much greater, it would require a larger and much more expensive establishment than the Post-office has at present.

You do not consider those questions that involve nautical considerations as part of the business of the Post-office to decide?—Certainly not.

What is the present establishment of steam-boats on the Port Patrick station?—There are two steam-vessels of about one hundred and ten tons and fifty horse power each.

What are the names of those two steam-vessels?—The "Spitfire" and the "Fury."

There was a third steam-boat upon that station, was there not?—No, there never were more than two; the "Dasher" was wrecked, and one of these is to supply her place.

When was the "Dasher" wrecked?—On the 19th December, 1830.

Under what circumstances was the "Dasher" wrecked?—She got upon the rocks in coming into harbour. At the moment she was about to enter, the wind shifted in a hard squall accompanied with a very heavy sea, in consequence of which she lost steerage way, and notwithstanding the attempts of her commander to wear her and get her head off shore, she struck and became a total wreck.

Which harbour?—Port Patrick.

You stated that an increase of establishment would be necessary if the Post-office station were removed to Cairn?—Yes, on account of the longer sea distance.

Do you think that one additional steam-vessel would be sufficient in that case?—I meant that larger steam-vessels would be required and larger power.

Would it not be desirable, even if the station were retained at Port Patrick, that there should be larger steam-vessels and larger power than those at present in use?—I doubt whether there is room for larger vessels in the harbour.

Are you of opinion that when the projected works shall have been completed at Port Patrick, that it will not be possible to employ larger and more powerful steam-vessels upon that station than those that are at present in use there?—You might employ rather larger vessels, but not much; I should say the present steam-vessels are quite large enough for the harbour; if we could get more power into them, it would be another thing; but as to the vessels themselves, I should think the vessels are quite large enough for the harbour.

Can you state to the Commissioners what has been the general length of passage within the last few years?—I have a return for the last three years, in which we have endeavoured to take it in the fairest way in which it could be done, to show what the actual performance of the service has been. The return I now deliver in shows the longest and shortest passage both to and from Port Patrick; the general average of the length of passage both to and from Port Patrick; the average of the ten longest and the ten shortest passages, and (which I conceive to be the fairest way of taking it) the average with the exclusion of the ten longest and ten shortest passages; and for the last year it shows that average to be to Donaghadee two hours and forty-one minutes, and from Donaghadee, two hours and thirty-one minutes.

The following paper was then delivered in and read:—

A Return relating to the Portpatrick packets for the years 1832, 1833, and 1834.

Years.	The longest and shortest passage.				General Average of the length of Passage.		Average of ten longest and ten shortest Passages.		Average excluding ten longest and ten shortest Passages.	
	To Donaghadee.		To Portpatrick.		To Donaghadee.	To Portpatrick.	Longest.	Shortest.	To Donaghadee.	To Portpatrick.
	Longest.	Shortest.	Longest.	Shortest.						
1832	h. m. 7 10	h. m. 2 21	h. m. 6 12	h. m. 2 12	h. m. 3 12	h. m. 2 38	h. m. 7 6	h. m. 2 21	h. m. 3 12	h. m. 2 36
1833	11 30	2 8	8 50	2 8	3 10	2 44	7 58	2 12	3 6	2 42
1834	7 40	2 10	4 3	2 4	3 3	2 32	7 3	2 7	2 41	2 31

You have of course an agent at Port Patrick?—Yes, we have, Captain Little.

When a steam-packet requires repairs, where do you send her to?—We send her to Holyhead; there are no means at Port Patrick for repairing her, excepting in the most trifling repairs; and even if there were, from the experience of how the work is done at Holyhead, and the prices and the check we have upon them, I should certainly always feel it my duty to recommend to the Postmaster-General to send her to Holyhead.

What has been the expense of the Port Patrick station within the last few years?—The total expenditure of Port Patrick, for the last three years, is about £3500 a year, from which the receipts must be deducted, amounting to about £1600 a year.

What is the total expense to the public thereby?—Nearly £2000 a year.

Did you ever attempt to perform the Post-office service between Port Patrick and Donaghadee by contract instead of by establishment?—We have not since the introduction of steam-vessels, because there are no steam-vessels on that station except the Post-office packets.

Do you conceive that there would be any difficulty in finding companies possessed of sufficient capital who would be willing to undertake the management of this communication?—I should think, recollecting how near Glasgow is, that people might be found who would contract for the purpose of employing small vessels between Port Patrick and Donaghadee, but we have never tried it.

Are you able to give the Commissioners any opinion as to whether a change in that respect would or would not be found to be exceedingly desirable to the public?—I could not give any opinion upon that, because the experiment has not been thought of.

In what you have stated to be the expense of this station; of course you include the salary of the agents, the pay of the captains, the wear and tear of the vessels, the prime cost of the vessels, and, in short, all the expenses of every kind that are incurred in that establishment?—I include every thing except the prime cost; the wear and tear of the vessel, the expense of the repairs, the salaries, the coals, and every expense connected with the maintenance of the station, but not the prime cost.

Are you able to state to the Commissioners what would be the expense if you take into consideration the prime cost of the vessels?—The Post-office has never made its calculations upon that principle.

You are of course able to state to the Commissioners what is the prime cost of these vessels?—Certainly: it appears in one of the Returns.

It is stated in this paper that the expense of the "Fury" was £6305, and that the expense of the "Spitfire" was £6343: are you able to inform the Commissioners what has been the expense incurred on account of each of these vessels since the time they were built?—They were not new vessels when they were sent to Port Patrick; they had been employed on the Dover station, for which they were built.

Do you keep a separate account against every vessel employed in the steam-packet service?—We could give the wages; and at many of the ports, those ports where we have no establishment of our own, we can give the actual expense of each vessel; but when you come to Holyhead, which is the place at which the vessels are repaired, the stores being purchased in large quantities, and issued as required for the purposes of the respective vessels, we have not the means of giving the actual expense of each vessel, but it might be picked out by the agent at Holyhead taking the value of the stores supplied to each packet at the invoiced prices.

Do you suppose at Holyhead there is not a separate account kept of every vessel and the stores issued for that vessel?—Certainly; and the agent might calculate the value of the stores that have been issued for each vessel; but we have no account here.

In what form do the accounts from the agents of the separate packet stations come up to the Post-office?—Had not the Commissioners better see the quarterly accounts themselves?

There is of course an issue of small stores at Port Patrick itself, is there not?—There is tallow, oil, coals, a few ropes, and deal planks if the paddle cases are carried away, and for the repair of any trifling damages.

The chief issue of course is coals, is it not?—Yes.

Who contracts for and takes care of the coals?—The agent at Portpatrick.

Is he the storekeeper?—Yes. There is a man under him who is called the storekeeper, receiving £52 a-year, who has the manual labour of the issues.

What is the whole of the establishment?—The agent, the storekeeper, and a boat's crew.

That is at Portpatrick?—Yes?

What is the process of making a contract for the coals at Portpatrick?—The coals are not supplied by contract; the agent avails himself of opportunities of small vessels running to and from the town and the neighbouring ports, and he purchases the coal at the pit's-mouth, getting vessels on the best terms he can to bring them and unload the cargoes at Portpatrick at the most favourable times of year.

In what manner are these contracts, and the issues of stores by the agent at Portpatrick checked?—The coals are not furnished under contract.

In what manner are these purchases of coals, and the issues of coals and other stores by the agent at Portpatrick checked?—The purchase is checked by the receipt of the parties from whom he purchases them.

Where are they sent?—They are sent here as vouchers in the accounts. All the issues of the very small quantities of stores required are checked by the commanders, who enter the supplies they receive in their log-books.

Are those sent up to the Post-office?—Monthly accounts of stores are sent up by the agents. The stores are very trifling in amount, but all the purchases appear also in the quarterly account, supported by the proper vouchers.

Can you state what has been the whole annual expense of late years for coals purchased, and of the stores of various kinds issued for the service of the steam packets upon this station?—Certainly; the accounts will show that at once.

But the items of this kind are subject to no control except that of the commanders of the steam-packets?—They are subject to a certain degree of check here; the stores are issued upon the responsibility of the agent; their receipt is acknowledged by the commander; and as the accounts are examined here, any extra expense would at once attract attention and be inquired into.

By whom are the accounts of the steam-packet station examined at the General Post-office?—I go through them all myself in the first place, and the Accountant-General has orders if he sees anything out of the common course at once to report it.

They are then examined by no one who has any professional knowledge of steam-packets?—Certainly not.—The agent can have no interest in issuing more than is absolutely necessary, and if he does not pay proper attention to his duty, the principal and main object of which is

Examinations.

No. 7.
G.H. Freeling, Esq.
21st Aug. 1835.

to check improvident expenditure, he of course would be responsible to the Postmaster-General, and would take the consequences.

What is the salary of the agent at Portpatrick?—£300 a-year.

Are these small stores sent from the general depôt at Holyhead, or are they purchased by the agent at Portpatrick?—They are so very small in quantity, and so few in number, that it is hardly worth while to send them from the depôt at Holyhead. What little wood he wants he purchases at Stanraer, or from any vessel that may happen to put in to Portpatrick.

Is the furniture and plate on board the steam-packets the property of the Post-office?—There is no plate that I am aware of at Portpatrick, and very little furniture; the chairs and tables are the property of the public.

You have of course a certain stock of anchors and cables for instance at Portpatrick, have you not?—I believe not.

Have you none at all there?—No.

Where do you send to for an anchor or cable, then, if it is wanted?—Each ship has got two cables on board.

But what do you do if a new one is wanted?—If a new one is wanted it would be obtained most probably from Liverpool, because it is the readiest port at which the supply could be procured.

The question of whether it is wanted or not would be left probably to the discretion of the agent, would it not?—If circumstances should arise that an additional cable or anchor were necessary for the packet's safety, the agent would be decidedly wrong if he did not take care that she was provided with it, but he would have to report his having so done immediately, and that would be submitted at once to the Postmaster-General, who would express his opinion either confirmatory or disapproving of what the agent had done; in any case in which there be time for a reference here, as in the case of sails for instance, the application is made first with a report of the survey of the commanders upon the station, and estimates of new sails, with the agent's report upon the prices, all of which are submitted to the Postmaster-General for his approval before acting upon it.

Do you conceive that there exists at the General Post-office professional knowledge upon this subject sufficient to exercise a real and effectual control over an expenditure of this description?—Yes, if the agent is good for anything.

When a steam-packet is wanted at the Post-office, in what way do you set about building it?—The last packet, in consequence of the recommendations of the former Commissioners of Revenue Inquiry, was built at one of the dock-yards, and the Postmaster-General has determined in future, although the expense is considerably larger than in a private yard, to build at the naval dock-yard; originally inquiries were made of the different builders in the river, people who were known to be well acquainted with the building of steam-vessels, at what price per ton they would build a vessel of a certain class, fastened in a certain manner, and when information had been obtained from several, the lowest generally, I think in every instance but one, the lowest was taken, and then the specification was made out as to the scantlings, fastenings, fittings, and all the details of the ship, and then a contract was made.

Have you any paper that will show at what rate the two vessels now used at Portpatrick were built per ton, exclusive of the machinery?—The contract price with the builder for the Fury was £20 a ton, the Spitfire was the same price, including the hull, masts, yards, boats and copper.

How do you procure the machinery for the steam-packets?—We agree with the manufacturers for a certain sum, which is to include the expense of the erection of the machinery.

Is that by private contract?—Yes.

In investigating this quarterly account of disbursements, under the head of stores for the packet service in Portpatrick station for the quarter ending the 15th of July, 1835, the accounts of the two vessels appear to be mixed up together; why are the accounts kept separately, and transmitted to the Post-office in that shape?—Because it is the general account of stores purchased for the station, they are purchased generally for the use of the station, and not for one or other particular vessel.

Is there any separate account of the issues of the stores by the two vessels sent up to the General Post-office?—Monthly statements are sent up, and on looking at this account you will see that the greater part of it is for hemp, and tallow, and coals. We have returns of the amount of coals supplied, and also of tallow and of oil supplied to each ship.

Is there any account of the issues of these stores to each ship regularly kept at the Portpatrick station?—Certainly.

Is that account sent up to the General Post-office regularly?—Returns are made of the quantity but not the amount; but perhaps the Portpatrick station is hardly a fair account to take, because the quantity of stores is so very small, that we should have the means even from the carpenters' day's work, of which we have regular accounts sent, of telling what every particle of wood is used for.

Take the case of Liverpool, for instance, the account there of the issues of stores that is sent up to the General Post-office is one general account of the general issues of stores to all the packets upon that station quarterly, and not a separate account of what has been the issues to each packet?—At Liverpool the accounts would show what has been the issue of coals to each ship, because the vouchers are supported by the signatures of the respective commanders; but at Liverpool we have not a depôt, the tradesmen of the port are employed, and the expenditure of each ship in almost every item can be shown at once by the accounts.

In the case of Holyhead, for instance, are the accounts of the issues sent up to the Post-office in the same manner, in the gross, and not divided into a separate account against each packet?—At Holyhead the accounts of stores purchased come up in gross, and are not sepa-

rated into accounts against each packet ; but monthly accounts are kept of the quantity issued to each, and, if the Commissioners wish it, an account can very easily be furnished of the cost price of every store furnished for any number of years to any one of the packets on that station. In the packets belonging to other stations which are repaired at Holyhead, there is a separate account kept of the stores, with the prime cost.

Is that regularly sent up to the Post-office?—Yes, it is so, that we know the expense of the repairs of every vessel sent from another station to Holyhead.

Here is the paper with the amount of the annual expenditure at Portpatrick. Now supposing a packet from Portpatrick received any stores or any repairs at Holyhead, can you inform the Commissioners whether that is entered here as an expense at Portpatrick, or as an expense at Holyhead?—It is entered as an expense at Portpatrick, because on these accounts being sent up, the agent is repaid the expense by warrant, and it appears under the head of the station to which the packet belongs.

You said you did not keep a separate account at Holyhead of the value of the stores given out to each vessel?—We do not upon the Holyhead station, but for all those sent out from other stations for repairs at Holyhead an account is kept of the value of the stores and the expenses.

Who appoints the agent at Portpatrick?—The Postmaster-General.

Who appoints his storekeeper?—The Postmaster-General.

And he appoints his captain, does he not?—Yes.

The only money-accountant you have at Portpatrick is the agent, is he not?—Precisely so, the same as on all the other stations.

Do the captains pay the money they receive immediately to the agent?—Yes ; they pay it day by day to the agent ; the passage list is signed by the captain, who is responsible ; it is checked by the mate, who puts his name to it also, and after that it is brought to the agent who receives the money. We have tried a check at Holyhead, not so much against the captains as against the stewards who collect the money ; we have had different trials as to their honesty, by employing people on whom we could depend, to take the number of passengers, whom they have thought to be cabin passengers, going on board and disembarking, and I am bound to say, that the result was most satisfactory, and most extraordinary, because the difference was barely perceptible, and what difference there was was in favour of the revenue.

What does your establishment at Holyhead consist of for the repair of steam-vessels?—It appears in the return which has been presented to the Commissioners that there are seventy-three persons, exclusive of the agent, for the dock-yard establishment.

In what manner are the accounts of the expenditure of the dock-yard kept?—They appear in the agent's quarterly store-accounts.

Are those accounts sent regularly to the General Post-office?—They form part of the agent's quarterly accounts, and are verified by him upon oath, and they must be supported by vouchers for every single shilling, or they would not pass the accountant-general or the auditors.

You have already stated that the expenses incurred in the Holyhead dock-yard, on the repairs of packets coming from other stations, are charged against those stations?—Yes.

Under what head do you charge the expense of the establishment of the Holyhead dock-yard itself?—That is charged and can only be charged against the Holyhead station.

Have the expenses of the establishment increased within the last few years?—I should think it is very probable that they have, as we have got into the habit of doing more work there. I may perhaps mention, as connected with this subject, that one of the Dover packets was recently repaired in the river Thames, by one of the most respectable builders in the river, and one whom we knew by experience to be more moderate in his charges than any other ; when his bill was sent in, it occurred to me that it might be a very good plan to send it to the agent at Holyhead, that we might obtain from him a comparison of the prices charged by a private individual, and what the price of the same work would have been, if it were performed at our dock-yard at Holyhead ; and the result is, that the expense at Holyhead would have been as nearly as possible precisely one half of what we paid in the river Thames ; but then I must state that the rates of labour are very different in the Thames and at Holyhead : that the ship-builder has got to make his profit, and that we have at Holyhead the free use of a public dock-yard, for which, of course, a charge is made at any private establishment in the river Thames.

Do you conceive that there would be any objection to the steam-packets that are employed by the Post-Office, being sent to Milford to be repaired instead of being repaired at Holyhead?—If there were a sufficient establishment at Milford, I am not aware that there would be any objection to it, but it would be farther off.

It would be farther for some, but not so far for others?—It would be farther from the principal stations, Liverpool and Holyhead, and there must be, to a certain degree, an establishment at Holyhead, because, as there are literally no tradesmen in the town, you must have something to meet ordinary repairs, otherwise, on the most trifling occasion, you will have to send away one of the packets to Milford.

Could you furnish the Committee with a comparative statement of the numbers and expense of the dock-yard establishment at Holyhead for the last ten years?—With respect to the dock-yard establishment, I doubt whether it has been in operation so long, but as to the actual numbers and wages, I conceive it could very easily be picked out from the quarterly accounts.

Have any of the officers of the dock-yard establishment official residences?—Not one ; the dock-yard is merely a space enclosed by four walls, with smiths' shops, and places under which the workmen can carry on their proceedings sheltered from the weather ; it was built by ourselves ; we have plenty of stone in the neighbourhood, and we got the lime very cheap,

Examinations.

No. 7.

G. H. Freeling, Esq.
21st Aug. 1835.

and it was built and added to from time to time; it is a thing quite of our own creation, and done as circumstances required.

Can you furnish the Commissioners with a statement of the numbers since its establishment?—It shall be procured from the agent.

Have you any further observations which you would wish to make to the Commissioners upon the subject?—I should wish to say, that the Postmaster-General has desired me to put in the evidence of Mr. Williams, the managing director of the City of Dublin steam-packet company, at Liverpool. I must explain, that Mr. Williams was ordered to attend for the purpose of giving evidence, by the former Commissioners under Lord Mulgrave's Commission, which terminated precisely at the time Mr. Williams made his appearance in London. Lord Conyngham, the then Postmaster-General, who had been also one of the Commissioners, had some doubts what course he ought to pursue, but recollecting that Mr. Williams had come all the way from Liverpool, for the special purpose of being examined, he thought he ought not to lose the opportunity of his presence in London, to obtain, as Postmaster-General, the best information he could with regard to the steam-vessels at Liverpool, and therefore he examined him upon that subject. His evidence was taken down by Mr. Gurney, and I now, by the desire of the Postmaster-General, beg leave to put it in.

The evidence of Mr. Williams was then delivered in.

No. 8.

No. 8.

Chas. W. Williams,
Esq.,
18th Nov. 1834.

Tuesday the 18th day of November 1834.

Charles Wye Williams, Esq. was called in and examined as follows:

The Dublin Steam-packet Company with which you are connected, is largely concerned in steam-vessels between Liverpool and Dublin, is it not?—Very largely; it is the only establishment between Liverpool and Dublin for steam traders.

Would there be any difficulty, in your opinion, in finding persons to contract for the Post-office service between Liverpool and Dublin?—I have no doubt, if the proposal were made, there would be persons who would offer; and if a proposal were made, I have no doubt our company would also make one; whether they would take the contract, would depend entirely upon the terms and conditions.

Would you be inclined to contract?—That is a difficult question; if the question were put to the public, in our own defence we should be obliged to make an offer; but, inasmuch as we are not likely to effect the making any money by it, I should be unwilling to propose, unless in our own defence, the service is so very severe; if it came into the market we must offer, or else we must do what would be the only alternative which I would have to announce; we must fight a very hard battle, we must endeavour to run them down to succeed ourselves; it would be a matter of life and death to us.

Do the private vessels go to sea at all times when the Post-office packets go to sea?—No, certainly not; there have been many times in the present season, when I would not for any consideration have sent a vessel out when the Post-office vessel went out; in fact, it is a risk which no person connected with trade would run.

Would you undertake to go to sea under those circumstances?—Provided we became contractors, and established a class of vessels expressly for that purpose; they must be ready at all times when the Post-office agent required them, and if that should be the condition.

Are the present class of vessels you have at Liverpool such as you would employ for that purpose?—Not carrying cargoes. They would be adequate for it, some of them at least, but not with cargoes. We have, in fact, but few vessels running in packet trim, from their being made much larger. Few at present are equal, even supposing they were put into packet trim, to compete with the mail-packets in severe weather, or in point of speed.

How has the service been performed, in your opinion, by the Post-office packets?—I cannot help saying, that I do not think the service could be done better. I am sure that is the general impression at Liverpool. I know there is a strong feeling of apprehension on the part of the merchants of Liverpool, lest the present mode of doing the service should be disturbed. The impression is, that I am in favour of disturbing it. As the leading manager of the City of Dublin Company, it is supposed that I wish to get it; it is not for me to stand up in Liverpool and contradict that, for I do not wish to convey the impression that we are unable to do it.

You think there is a strong feeling in Liverpool against the alteration?—Yes; I imagine there is no other company supplied with sufficient vessels to do it but ours; yet I am sure if there was an intention of changing the present system, and having the service performed by a private company, there would be strong demonstration of feeling against it on the part of the mercantile public at Liverpool and Dublin.

Are there no other companies at Liverpool that could take it?—No, there is no other company at Liverpool who have a sufficient number of vessels, confining themselves to a particular line. The steam companies in Liverpool, have generally a number of vessels which go to different parts, but we are the only company who have a sufficient number of vessels confined to one port; we have sixteen, twelve of them on the Liverpool line.

What has become of the St. George's Company?—They have a very powerful fleet, but they go to a variety of ports from Hull round to Liverpool, and to the north and south of Ireland, and the Clyde.

Is their company incorporated?—They are not, but I believe they are at this moment seeking for an Act of incorporation.

Do you know the nature of that company precisely, whether all their vessels are under one

management or one ownership?—A great number of them are now under one management, if not all: they have lately prepared a deed of partnership among themselves, and those who have signed the deed, have determined upon placing their vessels under the management of three directors.

Do you think private vessels could perform the service at this moment as well as the Post-office packets?—I think they could not, unless they constructed vessels specially for the purpose; our company could construct vessels in Liverpool fit for the service of the Post-office, but there are no vessels at this moment that could be appropriated to the service equal to the present Post-office packets. Ours were not built for it, and are a different class of vessels, equally strong, and well formed, but not in speed, not being specially built for the service.

Could it be performed more cheaply to the public?—No, I am perfectly satisfied it could not; in one item, perhaps, we might do it cheaper, namely, the compensation to the commanders; our class of commanders are not required to do the same service as the commanders of the Post-office packets, and they go for a less compensation; but that is but a small item in the account; in any other way it could not be done for less.

Vessels carrying freight could not make the passages like the Post-office packets?—No, certainly not, even if they went out; but the steam-vessels carrying cargo would not venture to go to sea at the time and state of tide when the Post-office packets go; for instance, they start often near the time of low water, or an hour or two before low water, a most dangerous state of the tide, and when no persons, unless they were prepared to guarantee the cargo, would be justified in sending a freighted vessel out of port; in fact, if there were a loss, I am of opinion a jury would decide that the parties were liable, inasmuch as that they had no right to send out a vessel when no prudent trader would go. The last time I went across, no consideration on earth would have induced me to send a vessel out with a cargo; we came on the most critical part of the channel just at low water, when a gale of wind arose; however the service required them to go on, and they made a successful voyage. Had it been one of our vessels with goods on board, our commander would have returned to port.

You think no vessel carrying cargo would have been induced to go out at that time?

—No, certainly not; or if they had gone out, they would very shortly have put about.

Would you have sent out a vessel without cargo under those circumstances?—Not unless compelled by agreement whatever the agreement should be, we should be bound to adhere to it.

In making a contract, is it possible to provide against any difference of opinion between the agent and the contractor, whether the vessel ought or ought not to go to sea?—Quite impossible to state that on paper, inasmuch as it would be a question for the judgment and discretion of the parties: at present we have occasional differences of opinion upon the subject with our commanders, and I always make it a point, if there is the slightest reluctance on the part of the master, never to force him to go to sea, and I am quite sure it would be impossible to put anything satisfactorily and conclusively on paper, with reference to such a regulation. If the agent and contractor differ, one must dictate, and then the person who dictates must take the responsibility upon himself; in fact, I think it would be an extremely injudicious thing, in any service, to put a commander, a seaman, under the absolute authority of a person on shore. He could not, in many instances, be able to exercise a sound judgment and discretion; the state of the weather at sea, and a variety of circumstances would operate to render it necessary that the commanders should decide.

Could there, then, be any real control of the Postmaster-General on the performance of the service?—There could not be any real efficient absolute control. No man would undertake to act under the absolute dictation of a man on land unless he chose to take upon himself the entire responsibility.

Have you had any opportunity of ascertaining the general feeling of the merchants of Liverpool and Dublin upon the point of the service being performed by contract, or by Post-office packets?—There have been several demonstrations of feeling on the part of the merchants both of Liverpool and Dublin. There was an apprehension some time back that they were about to be given up, and there was an evident feeling expressed on the part of the people of Liverpool. I know what the feeling was; and nothing but absolute necessity would induce me to offer for the service. I know the situation I should be placed in, and that it would be impossible to give satisfaction to the public, after the experience they have had, and the manner the service has been performed during the last eight years, unless the service was performed as at present, by four exclusively packet vessels, unconnected with trade.

What is the nature of the cargoes which are taken to Ireland?—Three-fourths of the cargoes from Irish ports are live stock; from several of them they send scarcely anything else: butter, wool, linens, whiskey, porter, provisions, and all agricultural produce, with a portion of manufactured goods. From England the cargoes are British manufactures of all sorts: sugars, dye, stuffs, cotton, and in general, goods of the same description as are imported in other vessels.

Are they full cargoes?—They are all full cargoes inwards, from Ireland, but outwards, to Ireland, about one-third of the vessels go back in ballast. Our company keep a register for the purpose of ascertaining the exact quantity of produce brought to Liverpool; and I find, that, under the head of agricultural produce alone, there was eight millions sterling value brought into Liverpool last year. I do not mean by our vessels alone, but by vessels of all classes. I would say that almost all the manufactured goods from England, going to Ireland, are sent in steam-vessels. The cargoes are very valuable, up to £20,000 or £30,000 value.

You think it would be very difficult to make contracts with the Post-office to carry the mails, in the way the mails are now contracted?—Very difficult, to make satisfactory contracts.

Chas. W. Williams,
Esq.
18th Nov. 1834.

Have you ever turned your thoughts sufficiently to what might be the probable expense of such a contract?—Things have been a good deal altered within the last few years, and I am not prepared now to state what our company would propose. In the first place, we must build vessels expressly for the purpose: that would be a *sine qua non*. We could produce more vessels for any purpose than any other company at Liverpool, but I am sure we have not vessels that would be qualified for the service, unless we selected our best, which it is not likely we should do.

Would you try to assimilate those new vessels as much as possible to the present Post-office packets?—I would: I would give them as much power as they would hold. We are increasing the power of our vessels now, and we find great advantage in doing so.

What is the proportion of the size of your vessels to those of the Post-office?—They are generally larger, that is, of more bulk, and fitted to carry larger cargoes, and probably could carry more power than the Post-office packets would be able to do.

It has been stated that Sir John Jobin would be likely to undertake a contract, and that he has the means to do it?—If the means be referred to, I dare say he has them; if he takes all the vessels he now has, and he has only three, the "William Penn," the "Gypsy," and the "St. Patrick," and, I believe, he is building another; but unless he takes all his vessels, and abandons the several lines he has now, he could not do it.

What are his lines now?—Waterford and Ross are his principal lines.

In what mode are your repairs performed?—We effect all our repairs ourselves: we have a very large establishment, in which we expend about £13,000 a-year in our own repairs. We keep as accurate an account as if we were working for strangers. We consider that creates a profit of £2,000 to £2,500 a-year, having all done in our own establishment.

Have you ever employed the tradesmen of Liverpool in your repairs?—Any large castings we get done by contract. For instance, the casting of a cylinder we do not cast ourselves; we can get work of that description readily done in Liverpool. We prefer doing such large work at other houses; but all wrought iron and brass work, and repairs we do ourselves.

Did you originally employ the tradesmen in Liverpool?—We did formerly, but not for the last six years.

As you state that Liverpool affords such facilities, by means of tradesmen, for effecting repairs, what induced you to set up an establishment of your own?—I do not say that it afforded facilities for repairs. We were compelled to set up an establishment of our own from the difficulty of getting repairs done within any reasonable time, or in the same efficient way we do them ourselves. We now have our repairs done while we should be looking out for a person to do them, under the former system. We prefer having our castings done for us. No large establishment could get on profitably, or satisfactorily, had they to go to strange engineers for their daily repairs, nor could the service be carried on with the same number of vessels.

Was the saving of time the only reason for setting up an establishment of your own?—The saving of time was one important object, and the getting the work set about immediately; but the saving of expense, and the perfection of the work, also influenced us. There is no such thing as controlling the expense in the engineering department when done by town engineers: it is impossible to check their bills. Whenever we have to do any work by town engineers, we are obliged to take their accounts as they give them. They put down the items of so many men employed, or so much labour expended, and it is impossible to check it.

Would there be any possibility to make an annual contract for the repair of a steam-boat?—No; quite impossible. One year we have very little repair, and the next year, perhaps, we have a great many expensive ones.

It would be impossible to make a contract of that kind?—Quite so, unless at an enormous cost. All contracts for machinery are objectionable; they rarely produce substantial work. It would be a very injudicious and very expensive way of doing it. They must of course make a tender which would cover all the casualties which are expected to occur. The people of Liverpool would contract for anything; but no repairing contract could be made safely or satisfactorily. I was very reluctant in having anything to do with an establishment of our own, inasmuch as it gave a great deal of additional labour, but we had no alternative; the same number of vessels would not be equal to the work if we were dependent on the public town engineers for repairing, which would if we did the work ourselves; because, when a vessel comes in, requiring repair, we turn all hands at once to it, and have it put out of hand. The town engineers would not do that; they must attend to all their customers, and give them all an equal chance. They would not stop the work they had in hand to attend to ours, nor would they put their best workmen to it.

Do you make your own boilers?—No; but we keep one boiler always in hand making, for the purpose of economizing the time of the boiler-makers. We make all our boiler repairs ourselves, and always keep a gang of boiler-makers at work. When there is nothing else to do in the way of repairs, we keep them employed in that way on a new boiler, and thus prevent the necessity of dismissing good men. One week or month there is little or nothing to do to the boilers at work; the next week there may be an imminency to do. To have good and sufficient men, we are obliged to keep them constantly employed, and in regular pay.

Have you ever calculated the expense of those boilers, made in your own yard, and the price which would be paid the manufacturer?—When we make boilers ourselves we make them considerably cheaper; we save money by it. We have been turning it in our thoughts to make our own boilers, but it requires a great deal of room, and a great deal of looking after; and our vessels being, unfortunately, all of different sizes, it would require to have a great many boilers ready on hand. If our vessels were all of the same size, and our boilers of the same

Examinations.

No. 8.

Chas. W. Williams,

Esq.

18th Nov. 1834.

size, we should make them ourselves. We had last year four boilers on hand; one made by ourselves, and three by different persons; but they would fit only a few of our vessels.

You think it decidedly the most economical way to make them?—Provided that the boilers made would suit more than one vessel.

Can you make a boiler for a vessel at home cheaper than you can provide it by purchase?—Yes; there is a very good profit by making boilers. The boiler-making trade has arisen in Liverpool within the last six or eight years; there was not a single boiler-maker in Liverpool ten years ago. We had to send into Staffordshire for our boiler; but all engine-makers have boiler-making establishments now.

Have you had any steamers sail from Holyhead?—No, never.

Are you well acquainted with Holyhead?—Yes; I know it tolerably well.

Have any of your steam-boats been obliged to put in there by stress of weather?—Yes; very often.

Have they been repaired there?—Yes; we have had an instance lately in which we were much indebted to the Post-office for the accommodation we received in the use of their yard: our vessel struck on a hitherto unknown sunken rock near the Skerries, and she was towed in there and repaired at a cost of nearly £300. There was a new keel put in; it was done with great expedition, and very well done; and we were under considerable obligation for the manner in which we were treated. We got the use of the Post-office blocks and had our work done in their establishment, and by their engineers.

Why did you apply to the public establishment at Holyhead?—There was no other.

Unless there had been a Post-office establishment, she could not have got her repair there?—No; we must have brought her to Liverpool; but it was so well done, she started the day after she got out of the dock for Dublin, and resumed her service the same day.

In what way are your stores, tallow, oil, cordage, and so on, purchased,—at Liverpool?—We purchase them wherever we can get them on the best terms; we have no particular mode. We lay in a stock now and then from the merchants at Liverpool according as we want, and the markets appear favourable; oil, tallow, cordage, timber, and iron, are our principal stores, we have large stocks of all those.

How do you get your coals?—We make a contract with a St. Helen's house to supply us with coals, and we have flats engaged to bring them from the St. Helen's rail-way down to Liverpool. We consume such a large quantity we were often inconvenienced by the flats being heaped, so we had to change our plan. Now we have eight flats for which we pay £80 a-year each; they are constantly employed by us in bringing coals for our vessels.

Is it a fair question what price you pay for your coals?—We make no secret of it; we pay a certain price; I cannot exactly state the price by the long ton, but it is equal to about 8s. 1d. the short ton. We have our own flats to bring them down, and we employ those flats in sending cargoes back to Runcom; we are compelled to deliver a large portion of our inland cargoes of flour, porter, &c., at Runcom, about 17 miles up the country; that may be said to be a saving to our company; we should have to pay a great deal more if we did not employ our own flats,

If your vessels lay at anchor in the river, would not the expense of delivering the coal on board be greater than when in dock?—It would be greater to this extent, that there would be a greater number of flats required to do the service. When the flats come in, the moment they discharge a certain quantity into the steamer, the remainder are put into a depôt flat and they then go off. If they were at anchor in the river, they would not get so much expedition in that way. A steamer will not hold above half as much as a flat—a flat holds about 60 tons,—so that it cannot be done so cheap at anchor in the river as in the dock; the same number of flats would not do the service, the price of flat-line must be increased.

And, consequently, the price of coal?—Yes; certainly.

Would it be possible to keep up the same degree of discipline on board your vessels which is kept up on board the Post-office packets?—Quite impossible; the men on board the Post-office packets feel themselves under a sort of obligation, like sailors or soldiers. We cannot keep our men under the same discipline; as soon as they get into port they often leave the business undone; if we were to attempt to control them in the manner a commander of a Post-office packet would do, we should not be obeyed. No captain of a private vessel can have the same control.

Would you be disposed, if the contract were thrown open on other stations than between Liverpool and Dublin, namely from Holyhead and from Milford, to make a tender?—No; certainly not, on any consideration whatever.

Is Liverpool the only one where it could be done?—Yes; and for the reasons I have mentioned it cannot be done to make money, and a private company will undertake it only for money making; the service is one on which we cannot feel any interest except as it leads to profit. I cannot understand what temptation a private company can have, except making money as traders; and therefore unless the thing be profitable in that respect there can be no inducement, and I am quite satisfied there can be no profit from carrying the mails, unless Government pays very liberally; but if a private company were to contract for carrying the mails, there would be an opposition immediately opened; the feeling which at present exists on the part of the public in preferring a Government vessel would be done with, and we should have to contend with every little vessel that might start. I would not have anything to do with a contract, unless driven by necessity. I know the service is so severe, and so heavy the risk, nothing could be made of it compared with the risk, even supposing it paid handsomely. We should be obliged to insure our vessels against the risk and which would cost, perhaps, six or seven per cent. This would be a very heavy expense. After that would come the question of profit. Now at the present moment

Examinations.

No. 8.

Chas. W. Williams,
Esq.
18th Nov. 1834.

our company divide only six per cent., without insuring their vessels, what then would become of the profit, supposing our present establishment were considered a mail-packet establishment, and obliged to insure our vessels; we should make nothing; for the dividend we now pay would be only equal to the insuring the vessels. If we were to attempt to carry on the service as the mail-packet does now, no proprietor would submit to run the risk the mail-packets do now without insuring. If then we had to insure at a cost of 6 per cent. on £60,000, the value of four new packets, and were restricted from carrying merchandize or deck passengers, which are often equal to a cargo, and frequently interrupt the management of the vessel, it would leave nothing for interest of money or profit.

Then your only object in offering for the contract would be to prevent others having it?—Nothing else, for that other would be a very serious rival to us. We could not expect the same indulgence from a private company which we do on the part of the Government packets, which starting two years after our company were established, mitigated the severity of a government rivalry, as much as they could; their object being principally to perform the service efficiently. There is now that mutual accommodation which would not take place between mere private traders. Mere private traders, if they came there would ply for passengers, and run down the rates of passage, and it would be impossible to satisfy the public in the way it is now done. It must be done in a very superior way, and that would be incompatible with any idea of profit, which must be the sole consideration with the private contractors.

How many vessels have you on the trade between Liverpool and Dublin?—All our vessels are employed between Liverpool and Dublin, except what run on the Belfast line, and a small one we have chartered to a company at Hull, which was inferior in size, and unfit for the Dublin station. We made last year 524 voyages between Liverpool and Dublin.

What number do you suppose would be sufficient for the Post-office?—It would be impossible to do with less than four, and even with that number it would be sharp work. If we took it we must have four for the purpose; and in case of any accident, we must send one of the others to supply the place. If the mail service were performed by contract, it would be quite essential that a part of the condition should be that they should not be traders, or carry loads of deck passengers; our commanders have frequently, in rough weather, a great difficulty in managing the deckers. They have even compelled the commander to put into port, and in such cases it would be madness to oppose them. Vessels carrying cargoes of goods or deckers, would not have the same speed.

Do you mean that the vessel being deeper in the water could not have the same speed with a lighter vessel?—Certainly not; for she must then be put out of what we call packet trim, that is, a vessel being in a situation that her wheels have a uniform hold of the water. If the vessel is lifted more out of the water, or depressed, her machinery is not so available as if she were put into the best position for using her engines to the best advantage; a very small portion of cargo alters the trim of the vessel to a great extent; the cargo must be put in a one end or the other. It is not like a sailing vessel, where you may put in 10 or 20 tons additional in the centre of the vessel, and which is of no consequence as to the trim.

The contract must be without taking cargo?—Yes; it must be so for a variety of reasons.

Would that increase the expense of the contract?—Yes, very materially; for if we were allowed, as we originally anticipated when the steam-packets were put on, that they would carry the mails and carry cargo also, and sail as the wind and tide suited, we should have been ready to do the service; but the Post-office have set a very bad example, they have done the work so well, nobody has any chance of competing with them. At first, the public were very willing to go in our traders, but now they will not do it.

Would it be possible to go the same speed with freight?—No, quite impossible; the public had no idea of a steam mail packet, such as at present exist. When we started carrying freight, if the public had been left to the accommodation which thus existed, they would have been satisfied with such steamers as we could have given them, and to have gone at such times as we pleased, and as is done on all other stations except to Dublin; but after so many years, and having experienced the advantage of exclusive mail packets unincumbered with cargoes or deckers, and starting at a given hour daily, it would be quite impossible to expect that the public would come back willingly to the accommodation of trading steam-packets. Before the Post-office packets were put on, we were in the receipt of £12,000 a-year for cabin passengers alone, and the very next year it fell off to £1,000; the public would not go with us, with the exception of the inferior class of persons, who otherwise would go upon the deck of the vessel, and which class, if they get the accommodation of our cabins, which more resemble a public-house, they would prefer that to paying a higher fare in the mail packet; but the better class of cabin passengers would not put up with such accommodation; whoever does the service, must do it pretty nearly the same way as it is done at present, and in the same class of vessels and managed in the same way.

There would be no other means of keeping time?—No; the time must be kept as nearly as they can. Unfortunately for those who would undertake the service, there would be no excuse for not keeping time, as the new channel into Liverpool has enabled vessels to start almost at low water. Though there is a great risk, they can go off; therefore the captain would be obliged to go to sea if the weather permitted. The want of water would not be an excuse as a few years ago.

What is the average duration of a boiler in your steam-vessels?—Some boilers last much longer than others; I should say about three years to three years and a half the average.

Have you made any calculation of the wear and tear of a boiler?—Yes we have, but I cannot charge my memory exactly; we calculated that every trip a vessel makes is a deterio-

ration of the boiler to the amount of about £12. In fact, if we were going to calculate what the cost was to be, we should put down £12 for each trip, boilers and wear and tear included. It is one of the most expensive parts of the apparatus; but there is a most extraordinary difference in boilers; some will last years longer than others; some will give way very soon in certain places, and no arrangement in the preparation can avoid it; a good deal will depend upon the iron; we find some plates gone in a very short time, and some others near them as sound as they were at first. Boilers made from picked plates of old boilers, last the longest; we have two that have been in use above four years, and will run nearly the fifth.

If you were to contract with the public, would you purchase the Post-office packets?—Yes, I should make an offer for them. I think without such packets the public would not be satisfied. I would feel it policy also, though at a heavy expense, to get even the same commanders, because the public would require the service to be performed in the same efficient way; and I do not know in what way we could satisfy the public, without coming as near as possible to the present establishment, and mode of carrying on the service.

You think the present Post-office establishment is as perfect as it can be?—Yes; I do not think in the present state of steam navigation, it can be done better.

How many passages do any one of your vessels make in the course of a-year?—Two of our vessels made sixty-two voyages each in the course of the last year; we sail as often as we can; last Sunday we had six vessels come in; but then we had last Friday, in consequence of the state of the weather, none of our vessels went to sea that day; there was an accumulation, therefore, for Saturday; it would not have been safe to put to sea, the captain would not have been justified in putting to sea.

Did the Post-office packet sail regularly on that day?—It did. With reference to the inquiry as to boilers, we consider a long voyage and regular going, is in general easier on the boiler than going seldomer. The "Leeds" went to Bordeaux for three years, and we found the boiler was less injured than if it had been on the Dublin line; it is the heating and cooling that injures the boiler, the expanding and contracting. A boiler will do upon that distant station, longer than it will upon the home service, provided it is made so as to discharge itself of the highly condensed water as it proceeds; after a few hours the salt water becomes highly condensed, and then it should be blown out, and new water taken in.

Do any other observations occur to you upon this subject?—I would only say that if the Post-office would be satisfied with a less efficient service than the present, I should be disposed to make them a very satisfactory tender. Our Company would make a tender that nobody else could, because we could carry a certain number of deck passengers with the mail, and a certain extent of cargo, and which would leave room in our other vessels, which we could turn to advantage. It would be equal to so much money made saved; but I am afraid the public would never be satisfied with it. I think it would be very hard to satisfy the people at Liverpool; and I know we should have rivals in the field directly, which would bring down the fares to a ruinous rate; and unless the Post-office would guarantee a certain amount of receipts, I don't see how the contractors could stand it.

Independently of any feelings of jealousy, could you do it as well as it is now done?—No, we could not, unless, as I observed, we had four equally efficient vessels confined to the service.

Have not the public a right to demand that the service should be performed as efficiently as possible?—I should go farther, and say that the making money ought to be no object with the Post-office—that the first object should be the service; and that is the general feeling. If the Post-office pays us liberally we should have no objection to contract, as we could have equally good ships built and engines made.

But they must pay you high?—Yes; and they must pay anybody very high who does the service satisfactorily.

No company will undertake it without profit?—Not if they knew what the service is. I calculate what the whole receipts are in a year, supposing there is no competition, though there would be a very serious one in the case of a private company; supposing there be no competition, I take the whole of the annual receipts, and I very much doubt whether they would be sufficient to maintain four vessels, without any insurance, against risk. I am sure they would not for a series of years; and no company would undertake it for a short period.

You would not undertake it for a-year?—No, nor for five years. I am sure no one would do it well. What would become of the vessels if they should lose the contract? If I were going to suggest to the Post-office, I should say they should fix a standard, and require that any vessels to be employed on the service should be equal to it, or require such a class of vessels that there should be no possibility of palming on them insufficient ones, otherwise the public would not be safe.

With these conditions, you would not be satisfied with a short contract?—No; for we must begin by building three or four vessels specially for the service, and those vessels would not be fitted for carrying cargoes, and useless, except for mail service; as, for instance, the old "Emerald Isle" and the old "St. George." They were very competent vessels, in packet trim, but insufficient for carrying goods. If there were even a very moderate cargo put on board the present Post-office packets, they would be no longer efficient mail packets. The build of a vessel for the mail service would be altogether different, the engine occupying the great bulk of the vessel, and which is in trading vessels made to hold the cargo.

Do your vessels go to Kingstown?—Only when they are prevented entering Dublin before high water.

They never go to Howth?—No; there is not water enough for them to go in there.

Examinations.

No. 9.
G. H. Freeling, Esq.
7th April 1836.

No. 9.

Thursday, 7th April, 1836.

George Henry Freeling, Esq., was again called in and examined as follows :

You stated, in a previous examination to the Commissioners, that there is a sufficient practical knowledge in the General Post-office to exercise a real and efficient control over the Packet expenditure?—I believe that that was with the reservation, if the Agent was worth anything—that we must depend upon our Agent, and I think my answer was, that there was a sufficient knowledge to control the service, provided the Agent was good for anything.

Who is there at the General Post-office who possesses this professional knowledge, and exercises this control?—There is nobody at the Post-office professionally educated, as a seaman.

Is there anybody at the Post-office who possesses a practical knowledge of the management of a Dock-yard?—None.

You stated that you yourself examined all the accounts from the yard?—I see all the accounts transmitted by the Agent, more for the purpose of satisfying my own mind that they are checked and certified and examined by him, than for any other purpose; for I need hardly say that it is utterly impossible for me, or for any person in London, to control the issue or the application of small stones at a distant Dock-yard.

Are the accounts for the year submitted to any examination in London, with a view to check the amount of the prices charged?—The quarterly accounts contain the tradesmen's bills for the supply of the articles charged, and it has happened in frequent instances that if it appeared from, I must fairly say, the casual examination that I was able to give them, that a higher price was charged than we have been in the habit of giving in London, an explanation is asked immediately; but as for any actual check and examination, for the purpose of seeing whether the rope was charged at a particular price more than another, that was not done. We have the guarantee of the tradesmen supplying us at Liverpool; the articles were ordered through the postmaster, who had some general knowledge of the prices, and there was the Agent, the responsible officer at Holyhead; if rope was charged more in one bill than in another, he, being a seaman, who must know the prices of those articles, it would have been his duty to call our attention to it; he was the resident check officer of the Postmaster-General, upon the spot.

In cases of expenditure in London, incurred on the part of the Packets, when the accounts do not pass through the Agent of any Station, are they certified by any person before payment by the Post-office?—Any articles purchased in London for the service of any of the Stations we invariably send to the Stations the bills themselves, to be certified by the Agent as to prices and the quantities received.

You conceive therefore the whole system to rest upon the responsibility of the Agents at the Packet Stations?—If the Agent is not responsible, I cannot possibly conceive what is the object of his employment; if the duty is merely to keep a journal of the arrival and departure of the Packets, the postmaster would have answered every purpose, and there would have been no sort of necessity for appointing an Agent.

Mr. Goddard, the Agent at Holyhead, stated to Captain Evans and Mr. Gardiner that he is not responsible for the issue of stores, for the receipt of stores, for the quality or price of stores, for the labour accounts, for the storekeeper's accounts, nor for anything connected with the engine department. He further said, that there is not a single book kept in the Dock-yard, for the accuracy of which he can answer. Do you consider that Mr. Goddard was justified in making that statement?—I would say very broadly, that that statement of Mr. Goddard is wholly contrary to my idea of his duties as an Agent, for if that statement be correct, I cannot answer the question better than by putting another—What can have been the use of the appointment of an Agent? As for the books and accounts in the Dock-yard, as it is termed—that Dock-yard was a creation of his own, left entirely to his management, and who was to be responsible except the Agent, the Postmaster-General's officer, I cannot possibly imagine. I had heard before that there had been a disclaimer on the part of Mr. Goddard of responsibility; I certainly thought it was to be taken with a qualification, namely, that it could not affect his general responsibility, but that he could not be held responsible perhaps for the application of every pound of iron and every foot of deal, but for the general responsibility of that Station I have always looked upon him, and on all the Agents the same, as the responsible officers of the Postmaster-General; and, perhaps, the Commissioners will allow me to remind them of my evidence long before there was any suspicion of these frauds, when I stated that the Agent was the responsible officer on the spot, and that if he did his duty all would go on well.

After what has been discovered as having taken place at Holyhead, are you not of opinion that it would be advisable to provide some more efficient check, on the part of the central authority in London, over the steam-packet establishments, than seems hitherto to have existed?—I have been anxious for years to get rid of the steam-packets, which ought never to have fallen upon me, but which did fall upon me as fifty other things have, because there was nobody else to take it up. With regard to the steam-packets in particular, the Commissioners cannot fail to be aware that the Post-office has now been under various Commissioners of Inquiry since the year 1821; that during the greater part of those years the question of contract and establishment of the packets has been an open question, subject to the decision of the Government. I say very honestly, that I have looked forward to that decision anxiously, because it was quite

impossible that with all I had to do I could attend to the steam-packets properly, but expecting from year to year that this question of contract and establishment would be settled, I did not feel that I should be justified in proposing to the Postmaster-General, of my own accord, to make a change in the constitution of the office, which change must create a new establishment that might be found unnecessary in the course of a few months, if the packets were taken from the Post-office and put under the Admiralty, or the whole of the service performed by contract.

How many years have you had the principal control over the steam-packet establishment?—From the first commencement.

Have you been in the habit of visiting the different stations, for the purpose of inspection?—I can hardly say for the purpose of inspection, but I have been sent down to the different establishments on inquiries into the conduct of captains, and for other purposes. I was at Holyhead for some time, to examine and try an experimental steam-vessel, and to attend the King when he went over to Ireland, but I can scarcely say that I ever have been sent down to examine the accounts; I do not think that I have.

In point of fact have you ever personally inspected and examined the accounts at Holyhead?—Never, I believe.

Has the Postmaster-General, or any other officer of the Post-office, ever inspected that establishment to your recollection?—I believe not; the only time that I have been at Holyhead since this Dock-yard has been established, and has been in operation, was once upon leave of absence—I was going to Scotland on leave of absence—I was kept at Holyhead for a day, and I took the opportunity of going through the works with Mr. Goddard, as any other person would have done, but certainly without an intention of examining the accounts; I do not think that I looked at a single book.

The commanders are required in some instances to certify the bills incurred for repairs, or outfit of their vessels; in case of their objecting to the charges in the bill, would they be paid without proper inquiry?—Not without proper inquiry; all bills for ships under outfit, when away from their own regular port and under the control of the Agent, are required to be certified by the Captain as to their justness and correctness.

Do you remember the case of the bills incurred for the outfit of the *Gulnare*, which have been stated to be paid, notwithstanding a strong representation by the Commander that they were unreasonable?—There were objections to certain bills of the *Gulnare*, which bills were put into the hands of Mr. Lawrence, who I know made inquiries into the disputed items, and, if my memory serves me correctly, a deduction was made from one of the bills, and explanations were given of the others. Mr. Lawrence, I believe, saw the tradesmen themselves.

Have any means been taken to procure stores by contract at Holyhead?—Endeavours have been made to procure coals by contract, but as for other stores I am unable to say; I think not; I think they were purchased at Liverpool at the market prices of the day.

Were you aware that the agent at Holyhead was in the habit of purchasing stores from the storekeeper and resident engineer, or that either of those officers were in any way interested in the supply of the stores?—Certainly not.

Were you aware that it was the habit of the officers at Holyhead to employ their own vessels in the carriage of stores at a higher charge than could have been obtained from private ship-owners in the neighbourhood?—I am aware that there was either some anonymous letter, or some attack in the newspaper, or something or other about the employment of vessels belonging to persons connected with the establishment—which it was I forgot, but it was sent down to Mr. Goddard for his explanation, and my own impression is that the explanation must have been satisfactory, but we certainly were not aware that Mr. Goddard, or any other person, was employing the vessels belonging to officers of the establishment, at a higher rate than he could obtain freight anywhere else.

Do not you conceive that the employment at all of private vessels belonging to officers of the establishment for public service is extremely objectionable and open to suspicion?—I think, certainly so; for that reason we sent down the letter or statement to Captain Goddard.

Are we to understand that in that letter the practice of employing those private vessels was actually forbidden?—My memory will not serve me upon that; it was sent down for Mr. Goddard's explanation: one thing I can go so far as to say, that if we had been aware that any vessels belonging to persons connected with the establishment were employed for the public service, if there had been any other means of getting the same service performed at the same rate of charge by other vessels, I should have taken upon myself to propose to the Postmaster-General to forbid the practice, as at all events objectionable and much better given up.

It appears that there is a vessel at Holyhead called the *Iris*, the expense of maintaining which, since 1823, has been £2984; can you state to the Commissioners for what purpose that vessel has been kept?—When the steam-packets were introduced upon the different stations, it was necessary to purchase the sailing vessels belonging to the commanders which were valued as packets and paid for very highly, and upon the re-sale by auction very little was obtained for them. The *Iris* was a remarkably fine cutter, and the Postmaster-General determined that she should not be sold by auction and thrown away, as the others had been, for she had been a yacht, and was calculated to be a yacht, and it was thought not at all improbable that we might, in the passion for yacht-sailing, get a purchaser; two or three people have been in treaty for her at different times: she was kept there as a reserve in case of being required for dispatches when the steam-packets could not be sent; she has been very little employed in the public service: she was employed as a packet on the Weymouth station for some time, and at another she was stationed for some months in Ireland for the

Examinations.

No. 9.
G. H. Freeling, Esq.
7th April 1836.

purpose of bringing dispatches. As for the expense, I do not know whether the sum mentioned includes her crew, because, although she had in point of fact merely one man in charge of her, her crew, as it was termed, were employed as labourers in discharging coals; though borne as the crew of the *Iris*, they were employed generally as labourers.

Mr. M'Knight states, that the late agent at Holyhead has, in some instances, paid freight for a considerably greater quantity of coals than was received, or in fact than the vessels bringing them could possibly hold; has this circumstance been represented to the Postmaster-General?—I heard of that circumstance casually the day before yesterday for the first time, and I then made some inquiries into it.—I think it is susceptible of very easy explanation, for on referring to an old paper, dated in 1829, it appears the coal is purchased by a sort of conventional measure of pit tons, or waggons at the pit's mouth, but afterwards turned into store at twenty-eight bushels to the ton, and the tonnage paid to the crews of the colliers is at the same rate at which the coal is turned into store, without reference to the actual measure at the pit's mouth.

[*Mr. Thomas M'Knight* was called in, and the last question and answer of Mr. Freeling were read to him.]

You have now heard the explanation Mr. Freeling has given upon the subject of the freight of coals; will you state to the Commissioners whether you consider that that accounts for the difference which you observed?—I should think it would in a great measure. The difference of the tonnage being delivered in a less number of bushels than that brought from the pit, would certainly account for it.

You stated to the Commissioners that while you were at Holyhead you detected great frauds in the delivery of coals?—Certainly, amounting to frauds.

Will you state in what that system of fraud consisted?—I apprehend them to arise from a larger quantity of coals being charged to the packets from the yard than actually went out, consequently in expending a greater quantity of coals upon the books than were supplied to the vessels at all, there appeared to be a very great irregularity in such proceedings.

In what way did you discover that those irregularities went on?—I discovered it, as I mentioned before, by measuring the waggons, and finding that the waggons could not possibly contain what was entered upon the books; they were represented to contain eighteen bushels, and we could not possibly put more than sixteen in them, and consequently there was charged, in every day's issue, a considerably greater number of bushels than there really was issued out of the yard.

(*To Mr. Freeling*).—Have the circumstances that Mr. M'Knight has just mentioned with respect to the delivery of coals been brought before the notice of the Postmaster-General?—This is the first that I have heard of it, which may probably be accounted for by the report having been made in my absence.

(*To Mr. M'Knight*).—Was what you have now mentioned to the Commissioners inserted in your official report to the Postmaster-General?—It was in an official letter, in almost one of the last.

It has been stated by Captain Bevis in a letter to the Postmaster-General, that considerable waste takes place in coals that are in store, and he requests that an allowance may be made in consequence of that waste. Have you examined into the practice upon this point in the naval yards?—I have.

Will you state what the result of your inquiry has been?—I have been able to ascertain that there is no allowance whatever for waste made in any of his Majesty's yards, and that the coals invariably are received by weight, and that they are turned out according to the weight at which they are received, and, therefore, that there is no coal lost in their distribution to the steam-vessels or otherwise.

(*To Mr. Freeling*).—It appears from a copy of a letter transmitted to the Commissioners, that Mr. Goddard was desired by you to make a full explanation of the charges made against him: has this explanation been received?—There have been two letters received from Captain Goddard, both of which are undergoing the process of being copied for the purpose of being sent to the Commissioners, in consequence of an order that we received yesterday or the day before; one of those letters we received only late last night; it had been in Lord Lichfield's possession.

Have you addressed any explanation to the Postmaster-General on the subject of the Holyhead establishment since you have seen Mr. Gardiner's and Captain Goddard's report?—I have not gone into the merits of anything that has occurred upon the Holyhead station, but I thought that there was a personal attack made upon me, and an attempt to connect me with what has occurred at Holyhead, in a way that I thought very unfair, to say the least of it; and I have made my observations upon that to the Postmaster-General as my superior officer, for the information of the Treasury and of the Commissioners.

Should you object to communicate that report to the Commissioners?—I have no objection to it, but I have not a complete copy; it was written at Paris and sent over to Lord Lichfield, who has the original, and who had a copy made for the Treasury.

Then you would have no objection to communicating a copy to the Commissioners?—None whatever; it was written for their information and for that of the Treasury.

With regard to any questions that arise at the packet-stations respecting the propriety of making any alteration in the machinery or size of the vessels, or any points of that description: to whom were such questions referred at the Post-office?—The Post-office was in constant communication with the London agent of Bolton and Watt, who is one of the cleverest and most intelligent men with whom I am acquainted, and we were in the constant habit of consulting either the agent of Bolton and Watt or Mr. Watt himself.

Your answer refers to questions relating to engines?—Yes.

Supposing the question related to any point affecting the construction of a vessel, whom did you consult in that instance?—The opinion of the agent on the spot; the agent at Holyhead, which is the principal dock-yard, being a professional man and a thorough seaman.

You had in point of fact no professional authority officially connected with the General Post-office?—None at head-quarters at the General Post-office.

Are you at all acquainted with a system of check in the Admiralty-office at Somerset House upon the naval dock-yards?—Not at all. The dock-yard at Holyhead was a creation of Captain Goddard's from time to time, to meet the exigencies of the service, and there has been no general revision or even consideration of the system of accounts, under the uncertainty always, as I stated before, of how long the packets would remain under the control of the Post-office.

It was stated by Mr. Goddard, that Mr. Banning, the postmaster of Liverpool, is responsible for the quality and prices of the stores purchased by him for the use of the packets at Holyhead, and that this system of purchasing was established by the directions of the Post-office; do you consider this to be a correct statement?—I certainly do not consider Mr. Banning to be at all responsible for the purchases that he made when the steam-packets were established at Holyhead; as that place did not afford means of furnishing stores for their maintenance, it was necessary to procure them from Liverpool. The agent was directed to procure them from Liverpool, and Mr. Banning was requested to interest himself in obtaining the necessary supplies of the best quality and at the fair market prices; indeed to act for the Post-office instead of employing a broker, and from his known respectability and character, from his position in the town, from his general ability and knowledge of all parties in the town, it was conceived to be quite impossible to adopt a safer and more satisfactory course to procure what might be required. Mr. Banning, I ought to say, has had no interest, direct or indirect, in the supply of any of those articles.

Are you aware of the system pursued by the agent at Dover with respect to the accounts?—We have no dock-yard at Dover. All articles for the maintenance, repair, and refit of the vessels are supplied by the tradesmen.

It has been stated by Mr. Hart, the agent at Dover, that the only check which he has upon the tradesmen's bills which he pays for the stores furnished to the service consists in his dependence upon the honor of those tradesmen not to charge for more than has actually been delivered. Do you conceive this to be such a check as ought to be the only one depended upon in any public department?—I conceive that the person who would give such an answer as that must have a very extraordinary idea of his duties as agent, and the duties must be carried on in a very different manner from what they were under his predecessor, where I know that inquiries were made of the different tradespeople to obtain estimates of the prices of the different articles that were required, and I know that the captains also were required to certify the bills as a proof that they had satisfied themselves as well as the agent that the prices were just and reasonable.

It has been represented to the Commissioners that great inconvenience has been experienced from no bag being made up at Dover to Ostend; what objection is there to this being done?—There is no objection on the part of the Post-office.

Would it require much additional establishment to enable a boat to be sent daily from Dover to Ostend?—I think, speaking off-hand, that one additional packet might be sufficient if sent from Dover, and then for that additional packet the cost of outfit and her maintenance, and the coals for two extra voyages in the week, the amount of expense might be easily ascertained.

Have any representations lately been made to the Post-office, complaining of the manner in which the service of the mails is performed between London and Rotterdam and Ham-burgh?—I have seen a letter from Mr. Wilson, the chairman of the Association of Merchants, complaining very much that the mails to Holland are sent, not by the regular packets belonging to the Post-office, but by vessels carrying cargoes. I understand, though I have not seen them, that there have been other representations recently to the same effect, those representations have been forwarded to the General Steam Navigation Company, who either have made, or are about to make, their explanation to them, and I believe that they are now being copied for the purpose of being sent to the Commissioners.

It has been stated to the Commissioners that there are no accounts of the packet station at Liverpool to be found in the office there, previous to the appointment of Captain Chappell, a few months ago; will you have the goodness to state under what circumstances those books were taken away?—I believe Captain Chappell applied to the son of Mr. Richardson, the previous agent, for those books, and was informed that they could not be given up, as they were mixed up with his father's private affairs, but he promised that copies of everything relating to the office should be furnished. On further application to him by Captain Chappell, he was informed that his father had required the books, and that they were sent away to him, but as there was no dock-yard establishment at Liverpool, and all the expenditure was comprised in the tradesmen's bills, the loss of those accounts is not perhaps of any great moment, as the accounts themselves are at the Post-office or the Audit-office.

Mr. Richardson was dismissed from the service of the Post-office on account of an extensive system of fraud in which he was discovered to have been implicated?—Mr. Richardson was dismissed for defrauding the tradespeople. The first clue to it was an accusation that he required a per centage on part of the victualling contract, and it was afterwards discovered that, although he had transmitted to the Post-office the receipts of the parties having

Examinations.

No. 9.

G. H. Freeling, Esq.
7th April 1836.

claims upon the office for articles supplied for the use of the packets, that they had been foolish enough to give their receipts to him without getting the money.

Mr. Richardson is abroad, is he not?—I understand that he is at Leghorn.

It will be therefore impossible to compel him to give up those accounts?—It will not be possible, I am afraid, to compel him to give up those books; but as his family, I believe, are respectable, and part of them still remain in Liverpool, I should hope, upon a representation to him, that he might be induced, from the respectability of his family, to give up those books.

The books have likewise disappeared at Weymouth; will you have the goodness to state to the Commissioners under what circumstances those books have disappeared, and whether you conceive that in that instance there is any reason to suspect that it has been the result of a bad motive?—I was very much surprised to hear from the new agent at Weymouth that he had not received any official documents from the widow and executrix of his predecessor, who stated that she had destroyed them. My own impression is decidedly that this most ill-advised act merely proceeded from the caution natural to her country, for the agent was a man of the highest moral respectability and undoubted integrity, and there cannot be the slightest reason to believe that the destruction of those books was occasioned by any improper motive. I believe that the Commissioners have received a letter from Captain Stevens containing Mrs. Mackenzie's reasons.

Are there any further observations that you are desirous of addressing to the Commissioners on the subject of steam-packet establishments?—None.

No. 10.

Edward Cohen,
28th July 1835.

No. 10.

28th July, 1835.

Edward Cohen called in and examined as follows:—

Have you any acquaintance with the steam communication between this country and Holland and Hamburg?—Decidedly.

State what means you have had of obtaining that knowledge?—Having been in that trade for the last 20 years; the Hamburg trade particularly; and connected occasionally with the Dutch trade.

Have you formed any opinion on the subject as to the mode in which that communication is conducted which you wish to state to the Commissioners?—I have.

Have the goodness to state it.—This time last year I took the liberty of writing to my Lord Conyngham, who was at the head of the Post-office; his lordship answered my letter, and gave me an interview at Dudley House; I laid before him a similar statement to that which I have handed to the Commissioners; his lordship approved of the plan, but he thought the country would not or could not spare the money.

Have the goodness to state the substance of that statement.—I stated to my Lord Conyngham that I thought I might save the country from £15,000 to £20,000 a year if the government would adopt steam-boats in preference to contracting with the General Steam Navigation Company; and at the same time I handed his lordship a statement showing the expense of the steamers and the probable amount of the freight they would make, out and home. His lordship thought the thing fit to be adopted, but at the same time he stated he thought the country would not be inclined to spare £100,000 for the purpose of adopting steam-boats.

You are of opinion, are you, that too much money is given to the General Steam Company for the services they perform?—I think so. And I am likewise prepared to state that they must make a large sum of money out of the trade, in consequence of the boats that they are continually building; now and then they are building a boat of from three to four or five hundred tons, which cannot be done without a great outlay.

If they are making unreasonable profits, how do you account for the circumstance that other companies do not underbid them for the contract, which is, you are aware, offered to public competition?—I have endeavoured to impress that on the minds of the public generally; but the fact is, it is utterly impossible to compete with the General Steam Navigation Company; having a large capital, having large and powerful boats, the moment a boat is attempted to be put on any station they immediately put on a boat against them; with their capital, and having been established many years in the trade, it is utterly impossible that any private company could compete with them.

If you are of opinion that no private company can compete with them, do you think it would be a prudent thing in any Government to put themselves in the situation of a private company, and to endeavour to compete with them?—They would not attempt to compete with the Government: they compete with a private company, because they know they have little or no means; but the Government have too much power for them to attempt to subdue them. Formerly the packets were allowed to take bullion and bonds; I have shipped millions of pounds sterling on board of packets for all the merchants of the city of London. I call now on the Government to carry goods in addition to the bullion and bonds, by which means they would save £16,000 or £17,000 a year, which they are now paying, and they would make most likely £10,000 or £15,000 a year besides.

Do you mean on the freight?—Yes, and I can prove it, if necessary, to the Commissioners: there is no difficulty in it, and from having had many years' experience I confidently say the public would support the Government packets in preference to any other; they know the regularity of them—they know they must go at fixed periods—they will have all the passengers—all the bullion—all the bonds, and they would have all the goods, provided there

was only time allowed to load and unload the goods. If a packet comes in on a Monday and is obliged to sail again on Tuesday, she would not have time to obtain the goods; but if three or four days were allowed to obtain goods, I have no hesitation to say that the packets would make £200 to £250 freight out. The Steam Company had a vessel come in on the 20th of the month with £450 freight; on the 27th a vessel came in with £400 freight: what an enormous sum that is, independent of what the Government are paying them!

Are there not other companies besides the General Steam Navigation Company possessing great capital, and who would, if this was so lucrative a business, enter into competition with them?—Not one—they cannot—they will not attempt it against the General Steam Company; they are sure to beat them down. The St. George's Liverpool Company took the contract of the Government; the General Steam Navigation Company gave them nearly £5,000 for that contract; it was told me some time ago, and it was confirmed yesterday—if the Commissioners think proper I will give them the names of the persons who told me—that the General Steam Company give to the St. George's Company £2,000 a year not to interfere with the contract, and so long as the Government contract with the General Steam Company they are to receive this £2,000 a-year. How is it possible for any other company to compete under those circumstances, and if that fact is proved?

Is the steam intercourse between London and Scotland conducted by the Steam Navigation Company?—No.

Must not the parties engaged in that intercourse be persons of great enterprise and capital?—Yes. But then they fill their boats with their own stations, and they would not feel inclined to leave the station to compete with the General Steam Navigation Company; they are doing well on their own station, and to compete with the General Steam they would lose a great deal, and the General Steam would not allow competition or anything to interfere with them. It is too great a body.

Do you know how many great companies there are now—Steam Companies—in London?—Foreign,—very few indeed; I should say, not more than one—the General Steam is the only one that goes foreign.

The steam-boats that go round from London to Plymouth—is that done by a company?—I believe it is, but it is mere coasting trade; they are not built to go foreign.

No. 11.

14th August, 1835.

STEAM PACKETS.

Robert Wallace, Esquire, M.P., examined as follows:

Do you conceive that the Steam Companies in the Clyde would be willing to contract for the conveyance of mails by steam-boats on reasonable terms?—The extent to which the building of steam vessels in the Clyde is now carried, and the excellent character which these vessels have obtained and preserved for many years, convinces me that the proprietors or builders of them would be willing to contract for the conveyance of mails from Liverpool to Kingstown, or Holyhead to Kingstown, Portpatrick to Donaghadee, or any quarter where contracts for steam packets may be required. In Greenock and Port Glasgow there are extensive builders of steam-packets; the characters of which companies and of the vessels they build, and the machinery which the engineers put on board of them, I believe are not excelled by any in the three kingdoms, nor is the speed at which they go excelled in any of the ports of the kingdom. In proof of which I will instance one among many—and this not a trader. The steam yacht built even a good many years back for Mr. Assheton Smith, Member for Caernarvonshire, by Mr. Wood of Port Glasgow, I had understood to have been built at a much lower rate than the Post-office steam-packets plying between Holyhead and Liverpool and Kingstown, which were built about the same time; and upon inquiry of Mr. Assheton Smith in the course of this Session of Parliament, he has confirmed the report of this being the case, adding that he had frequent opportunities of trying the speed of his vessel with the Post-office packets and others in the above stations, and he invariably beat them, and sometimes running a long way a-head of them. That his steam vessel had been constantly at work during the summer season for some eight or ten years, and had never required any repair at all, and had been sold to a company at Newcastle to trade with London; and although now loaded heavily with goods, such had been the excellence of construction of the vessel and machinery, and the benefit of having copper boilers in preference to iron, that she still, as he understood, was not costing the company any repairs whatever. In speaking of the cost, Mr. Smith assured me his vessel with copper boilers was considerably cheaper than the Government packets with iron ones; and that he considered the builders in the Clyde as certainly first-rate tradesmen for supplying steam-packets for any service whatever. That he would be willing to come before this Commission, or in any way, to give testimony to that effect.

How many companies are there in the Clyde of considerable reputation and capital?—There are a good many in the Clyde. In Greenock there are five or six companies of great respectability.

Do you mean as steam-boat builders?—Yes; as steam-boat builders. There is Messieurs John Scott and Sons, men of very large capital, and most excellent tradesmen. There is Mr. Robert Steele, also a first-rate tradesman, possessing large capital; and each of these companies have the advantage of wet docks and dry docks within their own premises. Mr. William Simons of Greenock, and three or four more, have constantly steam-boats building and repairing in their building yards. There are two extensive foundries in Greenock where

R. Wallace, Esq.,
M.P.
14th Aug. 1835.

steam-engines of the very best description are fitted up and sent to every part of the three kingdoms: they are sent to London, to Bristol, to Liverpool, to Dundee, Aberdeen, Leith, Newcastle, Dublin, Belfast, and many lesser places. In Port Glasgow Mr. John Wood is a very eminent builder; his vessels have not been surpassed by any, and some of the best steam-packets which trade between Leith and London have been built by Mr. Wood; and also by the Messieurs Scotts, and by Mr. Steele. In Glasgow and on the banks of the Clyde there are also a considerable number of excellent builders of steam-packets, with a great many foundries, where the engineering part is done in the best manner, certainly equal to what can be found in most parts of this country. It is understood, and it is my belief, that the prices and quality at which steam-packets are produced from the Clyde, including the different towns I have mentioned, cannot be surpassed, being not only excellent in quality, but very considerably cheaper than they can be produced, or have been produced in other quarters, and this will account for the extensive trade which has sprung up on the shores of that river. I may just add that steam navigation in this country commenced in the Clyde; that a company of merchants of Greenock shortly after established the post communication between Ireland and Holyhead; that they offered to carry the mail free of expense to the Post-office, provided they should be allowed to have the benefit of passengers, and no competition from the Post-office. This offer was declined on the part of the Post-office: a similar offer was declined by the Post-office with a Liverpool company, and these refusals by the Post-office, and this state of things, originated the ruinous building of Post-office steam-packets, and established the new system in that department of being proprietors in place of contractors, as they had ever been before. These facts are strongly pointed out by the Commissioners of Inquiry, but they consist also with my own knowledge, from information in my own possession taken from documents, such as petitions and memorials to the Treasury, to the Post-office, and to the House of Commons, by the parties who were so unjustly and unwarrantably aggrieved by the interference of the Post-office under the circumstances I have stated.

Do you think that steam-packets could be obtained by contract for the Post-office more cheaply than the way in which they are now obtained?—I am perfectly convinced of that being the fact, and that when this Commission has proceeded in the same just and liberal manner as to steam communication as it has done with regard to mail-coaches; that is, to give notice to the public in the most extensive manner, and a reasonable time for capitalists to look about them and to see their way, that assuredly there would be offers to convey the whole post communication by water under contract, the same as the mail-coaches has been done; and as the mileage of mail coaches will be done, if the same excellent course is adopted. At the same time, while the great public capital engaged by the Post-office on steam-packets exists, unless these were to be put by degrees on a footing of something like equality with the private contractor, it would be impossible for him to compete.

Do you know at what rate of prices the companies you allude to could furnish steam-boats, and are you aware what price the Post-office pay for the steam-boats now?—I am not aware what price the Post-office now pay except from understanding the rate paid for the communication between this country and Holland, Rotterdam and Hamburgh, and from the information which I have obtained from various quarters, I am of the belief that companies may be found immediately, in London and elsewhere, if encouragement is *bona fide* held out, to compete with the Steam Navigation Company which at present have that contract.

Do you know at all the number of men that the contracting companies put on board their steam-boats to work them?—The number of men put on board by companies engaged in steam-packet private trade depends entirely on the size and tonnage of the vessel, and on the nature of the service and the sea over which they have to pass; but it is a universal rule with all respectable companies to put as many men on board as will navigate the vessel with the most perfect safety at the greatest speed: in proof of which, I can give as an instance, that vessels arrive daily from Liverpool in the Clyde, starting at the same time, and the powers of the vessels so exactly equal, that they frequently perform the voyage, which takes about twenty-four hours, so nearly together, that the two vessels are frequently not more than one hundred yards separated at the time of their passing my windows, and on their arrival in the port of Greenock, and yet these vessels perform the voyage at a rate of about ten miles per hour throughout.

Is there any station with which you are better acquainted than others, on which you can give evidence as to their comparative advantages of contract or of establishment of steam-packets?—I cannot speak to one station more than another. I speak generally to the fact, that having investigated the accounts which have been produced to the Commissioners of Inquiry, and those which I have moved for, and which have been laid on the table of the House of Commons, I am prepared to prove to demonstration that the price at which the Post-office steam-packets have been purchased and provided, and the cost annually, is a vast deal more than would be sufficient to find vessels by contract which would do the required work in a manner equally satisfactory and regularly. I speak of all the stations which are under the management of the Post-office, my attention having been particularly directed to look into this subject, in consequence of the interest I have taken in the general management of the Post-office.

Are you aware that merchants put always much fewer men in proportion than the Government do in its vessels?—I am quite aware that merchants have fewer men on board, and for this reason; they are generally much better acquainted with business and the value of capital, and not so tied down to a moment as a Post-office packet must be; but provided merchant vessels were taken by contract, they would be bound to go at the same moment, and to arrive as regularly as the others, and consequently they must put on board such an ample number of men as would insure to the public the performance of their contract. I have never known

any merchants of respectability and capital make an engagement which they do not provide for the fulfilment of.

Have you any knowledge concerning the steam boats that traffic between Bristol and Cork by a company?—I have no specific information with regard to these vessels.

Have you anything to suggest regarding the Holyhead station?—With regard to the Holyhead station I have had a great deal of information conveyed to me in various ways; some part of it I have been obliged to look at with considerable suspicion, inasmuch as it appeared that there was either a jealousy existing between the parties who communicated with me, or there might be some disappointment as to employment or otherwise; but taking it as a whole, and having been in communication with persons of great respectability, intimately acquainted with steam navigation—(unbiased, I believe, regarding any individuals at Holyhead,) who have had opportunities from residence occasionally there, and frequent visitings in the neighbourhood, and whose attention had been drawn to the extraordinary fact of a great new establishment rising up there, apparently conducted by men not well selected by previous experience for so great an undertaking, these persons being good navigators also, have assured me that there is a degree of waste and expenditure in the land establishment at Holyhead far exceeding anything they had ever seen or heard of in any King's yard, even in war time, or in any private building yard, however ill-conducted, or in any establishment where tradesmen of the various descriptions of blacksmiths, carpenters, and all the others that are required for the building and repairing of steam packets is to be found. One point which has been prominently put before me, but of which I cannot speak as a fact, is, that a great proportion of the persons employed at Holyhead consist of apprentices. That these apprentices are charged at men's wages of a very high rate, and in consequence there are two evils arise: the first is the expense—the second is, that when Post-office packets are sent there an enormous unnecessary expense is incurred, and great delay; and I have been assured from a quarter which I am inclined implicitly to believe, that the repairs, generally speaking, really are of a very expensive, and unnecessarily so, extravagant description. This being a matter of opinion, which came to me from persons who may be deceived, I merely repeat it as it was conveyed to me, again adding, I believe the whole to be consistent with fact.

Do you know whether the Post-office steam packets have formed always a good and safe communication between Holyhead and Howth, or whether there is objection to them on that ground?—I believe the communication on the whole to be good; but I believe that some of the vessels at present plying belonging to the Post-office are, what sailors would call, perfect *tubs*, quite easily to be beaten by vessels of much less horse power, and which would cost a great deal less money; and if my information is correct, some of the last-built are of this inferior class.

Are you aware of the terms of the Post-office contract for the conveyance of letters between this country and Rotterdam and Hamburg on one side, and between Liverpool and the Isle of Man on the other?—I am aware of both of these being done by contract, and I have seen a calculation made; it was shown to me by Lord Lowther in manuscript, by which it was made to appear that the charges to the country by the Post-office packets exceed those by contract in a proportion of one hundred per cent. at least.

Do you think the contract between this country and Rotterdam and Hamburg is established on fair terms for the public?—The reports I have heard induce me to believe that, on open tender, this contract will be considerably reduced. I have reason to believe these contracts would be reduced £5000 or £6000 a-year on open tender. With regard to the contract between Liverpool and the Isle of Man, it is done at a very cheap rate, not exceeding £800 a-year, I believe.

Do you know anything respecting the station at Milford?—I only know it from having read very carefully the various reports on communications with Ireland. The expense incurred there is very considerable, but I do conceive the expense to be attributable to the system of employing vessels, ill-manned as all are, the property of the Post-office, and still more from the imperfect construction of these vessels, and even yet more from their not being of proper power to navigate the rough sea in winter months between Milford and Dunmore.

Do you think that a company could be found to carry on the communication between Milford and Dunmore at a rate much cheaper than that at which the Post-office now does it?—My conviction being that a private company can manage everything so much cheaper than a public department, I have no hesitation in saying that that would be the case; and I would enforce my view with this argument:—Steam companies are everywhere thriving, the price of their shares are everywhere increasing under good management, if I am rightly informed; as to the Great London Steam Company the shares originally were £15, the shares dropped down to £3 and £4, and since they have had the conveying of the Post-office mails they have very much increased in their value, and at this moment I am told they are worth £18; but, speaking generally, steam-navigation companies in London, in Liverpool, in Bristol, and in all the ports of the Clyde, in Belfast and in Dublin, are all making money: it is an exceedingly good trade, either as regards the larger class of vessels or the smaller. There were no less than nineteen new steam-vessels all at one time being built, on the shores of the Clyde, in the month of April last; and several of these were of a very large size, and unusually strong workmanship, particularly that magnificent vessel the *City of Aberdeen*. If my impression, therefore, be correct of a great amount having been lost to the country through the employment of vessels belonging to the Post-office, and if it be true that all other trading companies have made a great deal of money, the position I have taken will be borne out, that private companies can do with a profit that which a public department would do at a loss.

Do you think there would be the same regularity and security if private companies were everywhere to be employed?—I have no doubt of it; where the greatest regularity has been

exhibited is in communications with Ireland from Liverpool and from Holyhead, and during the time the private company from Greenock, and the private company from Liverpool, conveyed the mails, these went with equal regularity as the Post-office communications have done since; bearing in mind, however, that steam navigation was then in its infancy, that these companies initiated and originated the navigation across that extremely rough passage, and of course a similar company now from either place, or any other place, would keep the time as well as they did then, and as much better as the great improvements since made would enable them to do. It is a mere matter of horse-power and of good mechanism in the hull of the vessels, and of management, which regulates the certainty or uncertainty with which steam communications are made.

Would you recommend any alteration in the present system of communication between Dover and Calais? for instance, would you recommend contracts there?—I would recommend contracts between Dover and Calais, and everywhere else; I would recommend a better class of vessels and of greater horse-power, and of course that the packet conveying the mail belonging to this country or to France should be the packet to bring back the mail; and I believe the contract system would hold equally good when confined to passengers and mails, as where it shall be convenient to admit of goods being carried; but were day mails from London established, and consequently two packets crossing daily, as to Ireland, there would be less necessity for confining mail-packets to passengers and letter-bags. With regard to the communication between Liverpool and Ireland, and Holyhead and Ireland, I am of opinion that, were two mails sent daily from London, (and two mail-coaches go and come between London and Liverpool at present,) there would not be the same necessity for vessels keeping the time and making the voyage in the very shortest space, because the communication being twice a-day from London, the anxiety on the part of the merchant, and the necessity on the part of the Post-office to give the earliest possible communication, would not be so great. And the difference between the best class of vessels carrying a moderate quantity of goods and mails at the same time, and the best class of Post-office vessels now employed, would not be found to be so very great, if proper regulations were framed and enjoined as to the vessels not over-loading.

With regard to Dover, you are aware the Post-office for several years gained a revenue by the steam communication between Dover and Calais?—I am aware that it is so stated, but cannot allow myself to believe it, being also aware the Post-office has refused or declined to furnish me with an account such as all other steam companies keep. I am now possessed of a Post-office paper asserting they could not make a return to a notice which I put on the books of the House of Commons, which notice required "the original cost,—the whole outfit,—the amount of repairs made, and additions made from time to time,—the interest on these different items, with the profit and loss calculated annually from the commencement of their speculations, with interest at five per cent., or ten per cent., or twelve and a half per cent., which latter is the usual and proper steam-packet rate of interest I am informed, as the Post-office might keep their books." The reply was in writing, of which I am now possessed, having been given me by Mr. Vernon Smith, that they could not make the return, because they had not kept their accounts in a form to enable them to do so. And, therefore, the apparent profit of the Post-office is, in my opinion, a delusion, for without they charge interest on prime cost, without they charge repairs and interest on the repairs, and without they keep a regular profit and loss account, as all private traders do, and as they as public traders ought to do, I continue to be of the belief that it is quite impossible for them to furnish an account that would be satisfactory to any man of business, and therefore I do not believe they really could show a profit.

Have you any other information to give about steam-packet communication?—I think not.

Mail-coach Communications.

Have you formed an opinion as to the possibility of accelerating the mail communication generally?—The opinion I have formed as to the accelerating the mails is, that a considerable time may be saved in the changing of horses at each stage; from all the inquiries I have made, and from my own personal observation, the changes of mail-coach horses are not near so rapid as in the best description of stage-coaches, and my own opinion is that between London and Edinburgh for instance, and London and Glasgow, a minute may be saved on an average at each change of horses. The places of stopping for the sorting of letters might also be much better arranged; an additional clerk, or whatever might be required, not to delay the mails a moment more than absolutely necessary when passing along so great a line of road as either the North road to Edinburgh, or that to Glasgow, would be comparatively of no consequence; and I am convinced there is no occasion for any mail-coach at any time to stop more than twenty-five minutes for passengers in taking their meals, provided the Post-office have the arrangements of their department ready sooner. These mails, when they leave the Post-office, like very many others, are sent off with the roof loaded with bags, in a manner no less inconvenient and dangerous, than injurious to the contents of the bags in stormy weather, which they are sure to encounter the greater part of the year in such long distances; and there is no other cure for this increasing evil but two coaches daily, the expense of which will be a mere trifle, if anything at all, on well-frequented roads. This fact will be best proved by keeping in mind that stage-coaches pay well while subject to toll dues, and must become profitable when freed from them. With regard to these two northern mails, this extraordinary fact exists: they are allowed forty-five hours to come from Edinburgh and Glasgow to the Post-office here, and forty-two only to go; the difference of time of course is needlessly taken up by the Post-office in the want of proper arrangement for sorting of letters and getting them put into the mails, and not a little perhaps in accom-

modating the horse-contractors along the road. Now when so many other mail-coaches run along these great roads, it appears to me the short-distance coaches ought to be called upon to do as much of the heavy work as possible, so as to relieve the long-distance coaches of any road work that can be dispensed with. Of itself this would have two good results; in the first place, it would lighten the long-distance coach, and allow it to go at a better rate of speed; in the next place, it would prevent delay, and would enable even one mail-coach a-day, as at present, with such a diminution of the mail-bags, to take another outside passenger without any additional expense or trouble. I conceive the draught to the horses not to be much increased by the weight, at the height outside passengers sit; although it would be increased if any great additional weight was to be accumulated below; and I think the benefit of an additional outside passenger would be so much to the horse-contractors, that they would accelerate the mails without any additional expense, and that ten miles an hour including stoppages, would not be more than could be done quite easily, if the different points to which I have adverted were to be conceded, and the stoppages and changing of horses were to be as short as possible. I do think that the addition of an outside passenger would enable the Post-office to contract for accelerating the mails to ten miles an hour on all the great lines of road.

Examinations.

No. 11.
R. Wallace, Esq.
M. P.
14th Aug., 1835.

You think the time required for the communication between London and Edinburgh might be much shortened?—Yes, I am quite certain that it may be, and am confirmed in the opinion by the fact of the distance being done in 42 hours by the mail-coach going to Edinburgh, and in 40 hours by a curricule-mail direct from Morpeth, and every one knows a mail-coach with four horses can go as speedily as a curricule with a pair. The expense of the curricule appears to me to be gratuitous almost, it takes very few letters from Edinburgh, and the arrival of two hours sooner could be accomplished at a cheaper rate, and with great advantage, by a mail-coach, inasmuch as the passengers would pay a considerable portion of the expense—at present thrown away.

Do you think the mail goes the best possible road between London and Edinburgh?—At present I believe it goes the best road, although I speak with diffidence as to that; but there are great improvements in progress on the nearer lines of road by Morpeth and Kelso, and I have no doubt a mail-coach may now go with safety in forty hours from London to Edinburgh by the nearest road, and by the coast road also, by Berwick-on-Tweed.

Is the mail communication in Scotland generally good?—The mail communications by coach in Scotland are comparatively few—on the great lines of road only mail-coaches are. On almost all the rest the mails are conveyed by gigs and horses; there are many roads on which there are most excellent stage-coaches going at all hours of the day, by which it would be a great convenience to the public, and I should suppose advantageous to the revenue, to send mails in the same way as they do so generally in Ireland; but the Post-office have never allowed this to be done.

You say in Ireland they send mails by the coaches—do they send a guard appointed by the Post-office with the mail?—In Ireland, in all cases where they send mails by stage-coaches, they send a guard along with them; at present the expense to the post-office consists only in the charge made for the guard—being freed of the tolls has been found sufficient on all the roads in Ireland; except on those where old contracts and leases of an extraordinary and unwarrantable nature are still allowed to exist, to embarrass and hamper the Post-office, the expense, I am informed, merely amounts to the wages of the guard, which expense is diminished when the stage-coach happens to employ one.

In Scotland you would recommend, in many cases, discontinuing the sending the mail by gigs?—I do not wish to give an opinion so decided as that without further looking into the question, and to the particular places and districts; but I would say that where there is a communication between great towns, and through populous districts, and where the commercial interests are extensive, there ought to be mail-coaches, without looking minutely whether a little expense might be incurred or not. I must say, in justice to Scotland, that so near an account and reckoning ought not to be kept—the more especially as the Post-office gives to Ireland a communication for passengers only, amounting to £20,000 a year, which I should be sorry to interrupt, and this is independent of the expense of the Milford Haven communication. Now when stage-coaches would give convenience and security, and merely cost the amount of a guard, and often not so much, I submit that in all such cases stage-coaches ought to be employed, and gigs put down; for instance, in the case between Greenock and Glasgow, and between Glasgow and Ayr. It seems to me quite preposterous to allow the London mail to be stopped in the centre of the city of Glasgow, as it is at present, and to allow the bags to be put into a little miserable gig, such as I have before described, to pass through the populous town of Paisley—rich in its manufactures, and containing 50,000 people; independent of the town of Johnston, only three miles from it, where there are not less than twenty cotton-spinning factories; and further on the towns of Port Glasgow and Greenock, being the mouthpieces of the Clyde. I conceive that the whole correspondence of such an enterprising community should not be confided to a little one-horse machine, with all the risks of accidents to the horse and driver, and the consequent delay and perhaps stoppage which may take place—and which must and will take place occasionally, and especially in snow storms.

Are you of opinion it would be of advantage to Scotland to have mail communications more frequently than exist at present?—I conceive it to be of great consequence to the whole of Scotland, and to its communications with Ireland, to have two mail-coaches daily from London to Glasgow as soon as possible. For a single mail-coach the load is much too heavy—a second mail would obviate this, and insure the delivery of letters, and their return at hours to suit the whole country. At present there are only nine mail-coach lines in all

Scotland. Were the Post-office to sanction two mails to Glasgow daily, I have no doubt the road trustees would allow each to pass between Carlisle and that city on payment of half the present rate of toll dues, which would keep up the funds of the road as at present. I may just add, that there will be no difficulty in finding competitors for horsing the coaches, and that the passengers and parcels will pay the whole outlay. Let it be tried, and my words will come true. In Scotland generally, the post communications are more frequent than most persons are aware of—between Glasgow and Edinburgh there are two mail-coaches daily—one starts at twelve o'clock in the day, the other at ten o'clock at night, and this makes an extremely convenient communication between that city and the mercantile metropolis of the country. The mails from Ireland and other places arrive in Glasgow at various times of the day—the delivery of the letters in Glasgow are four times a-day—the delivery of letters in Edinburgh are four times a-day; General-post letters, I mean; the delivery of letters in the town of Paisley, and in Greenock, are four times a-day. Therefore the internal mail communications are frequent and well managed. There is one communication which appears to me very much wanted, and in which I have no private interest, being at the opposite side of the island from where I live,—a communication direct between Edinburgh and Dundee, in place of going round as at present by Queen's Ferry and Perth; and this would be one of the good effects of two arrivals in the day from London, when two mails shall be sent to Edinburgh every day—one ought certainly to be sent forward through the rich and populous county of Fife, direct to Dundee, and it would save a great deal of time in so doing, and be of much public advantage. The objection is, the want of a good pier at present to send off the mails by steam-packets in bad weather—therefore it would not do to take away the communication by Queen's Ferry; although it would be a great advantage, and it is justly due to Fife to give it the advantage of a direct communication when they can have it, which they may have so soon as the Pier at Leith, or at Trinity, shall be put in good order.

Do you think more frequent mail communications in England would be attended with advantage?—I have long been of opinion that more frequent communications in England would be of advantage, and I have had a good deal of conversation with highly respectable merchants of the city, who have expressed their high satisfaction with the proposal of their being day-mails from London for the purpose of communicating twice a-day with all places of trade, manufacture, and commerce; I may add, my having been very much urged to endeavour to have another mail-bag sent at this very time to Liverpool, as two mail-coaches are now publicly known to go and come from that place daily. My own opinion is, that a mail ought to be sent from London about eleven or twelve o'clock in the day, to go by Manchester, where it should arrive at eight next morning and forward the mail by the steam-carriage train which leaves at that time: in this way the mail would be delivered at Liverpool so as the letters would go out with the second delivery, if not in time for the first.

This twelve o'clock day-mail would take the whole parliamentary proceedings, the morning newspapers, and a considerable quantity of the correspondence from the night-mail, and would consequently render it light and convenient, in place of being over-loaded, as it is at present, and would moreover be a very great accommodation to all the great towns through which that coach would pass.

You say it would be an accommodation to the public; do you think it would be any loss to the revenue?—I think it would not. I am convinced of two things, and so much so that, until they be tried, I must continue to be of the opinion, that the cheapening of postage-rates would increase the revenue, and that the increasing the number of communications would increase correspondence, and consequently the revenue; and the expense, I am convinced, ought not, with good management, to be increased at all. If it is to be increased it could only be by the amount of paying a guard, or some such small matter. I am also satisfied that a great addition to the revenue would be found by allowing a cheap conveyance of mercantile knowledge, in the shape of prices current. I am convinced of what I state from having made extensive inquiries within the last twelve months on this subject. All the merchants agree throughout the country parts of the kingdom, that such communications would be of great advantage to them, and the most intelligent bankers, agents, and persons who transact the business of country dealers in London, assure me that I am perfectly correct in my views; they admit, however, that the great merchants and bankers will probably give an opposite opinion, because it is not their interest that the country should know in twelve hours the varied prices which take place in all marketable commodities; but it is of immense consequence to all dealers in the country to know the cheapest market rate at the earliest time; this would not only be of great advantage to trade, but also increase the revenue. It has been found in France, in Prussia, and, as I understand, in Belgium, that a very considerable revenue has been gained by allowing the sending at a very low rate of postage prices current, the effect of which is to increase the correspondence. (Nothing is allowed to be communicated in these publications but merely the state of the market.) They are merely printed papers in an envelope. They are of a very small size, and an immense number of them go in a small compass.

Have you formed any opinion as to the best mode of contracting for mileage of mail-coaches by horse contractors?—I have already stated my opinion on that subject. I think the addition of an outside passenger would be a great inducement to contractors, and would certainly not in any way hinder the regular and safe arrival of mail-coaches. I have been induced to make inquiry as to this subject of those who have travelled a great deal in Ireland, and they all assure me, both those to whom the coaches belong, and those who horse them, and in Ireland these are generally conjoined, that they have never found any inconvenience from the additional weight of the fourth passenger, and moreover that a fourth passenger is

rather a convenience in long distances, for it makes it pleasant and more safe for three to sit together on the roof. The only mail-coach I know myself which carries four, is that from Carlisle to Glasgow, and I went on the roof last summer, making one of three in preference to sitting with the coachman, by way of a trial of it, and it appeared to me to be one of the most comfortable seats that possibly could be of the kind; the distance is there done at ten miles an hour, including stoppages. And no delay has ever taken place since the mail was accelerated to ten miles. Before closing this subject I cannot refrain from recording the extraordinary fact of London being actually without post communication nearly two days in each week of the year. The whole correspondence is detained here fourteen hours out of every twenty-four during five days of the week; forty-nine hours elapse between the delivery of letters on Saturday morning and those of Monday, and forty-eight hours between the time of sending them away by the General Post on the evenings of these two days. This would at once be put an end to were day-mails despatched at various hours. While it exists it will have the effect of retarding the whole correspondence of the empire with all the rest of the world, a fact I have always found it impossible to prevail on strangers to London, and every foreigner, to believe.

(*Penny Posts.*)

Can you give any information respecting penny posts in the country?—There are universal complaints at the charge of a penny postage throughout the country, in two ways: the complaint arises from the penny postage being superadded to the general postage. No person complains of paying a penny for having a letter carried from the place where it is put in, to its destination; but when a letter has a penny postage superadded, when the distance is within the Post-office rule, the complaint is universal and quite just, for it is an imposition. As regards newspapers, there is a general and a most just complaint in the country of any charge on them at all, and this on the principle that they legally go free. There is no complaint against penny posts as local posts, but there is great complaint against the superadding the penny to general post letters and any newspaper whatever, in the way I have described. And it evidently becomes an extreme hardship in the neighbourhood of great towns to have second-hand newspapers charged to the industrious classes with a penny, when they are sent to the rich all over the kingdom for nothing.

Would the revenue lose if this payment were abolished?—Of course the revenue would suffer to the extent of that penny, but it has no just claim to it. When on the subject of penny posts I am reminded of a point which has been brought under my notice as to the London twopenny post, which can be expressed in two words, and I must say I agree in the opinion that the revenue would be benefited, and the public too, if the charge of the twopenny post were altered in this way; that all letters evidently double, and all parcels to be charged twopence, and all single letters to be charged a penny. I have reason to believe that vast numbers of small notes and letters are refused; but independent of that, I hear from all quarters, that a vast many more little notes and communications would be sent, provided a penny was charged, and on the same principle this may be argued, that a vast deal of travelling has absolutely been created in the streets of London by the low rates at which the omnibuses take persons from place to place: now few people walk, formerly they all walked. Make the charge of an omnibus a shilling and they would walk again. On that ground, and from many remonstrances which have been made to me, supposing that I might have the means of stating it, I am inclined to believe the revenue would increase, and the community would be inconvenienced by single letters being charged one penny, and all double and large ones twopence.

Do you think that in other respects the twopenny post is well regulated?—I am still of opinion the twopenny post may be managed in London, as it is in every other part of the three kingdoms, along with the general post, but not until there be departures and arrivals of mails at various times in the day. I think it must be kept separate until that arrangement is entered into; but I think it is remarkably well managed.

(*Early Delivery in London.*)

Have you any recommendation to offer respecting the early delivery of letters in London?—With regard to the early delivery of letters, I am of opinion (and I cannot allow myself to doubt it can be otherwise than correct) that there ought not to be any preference in any quarter in that respect; and from what I know of the different hours at which the mails may be made to arrive, I am quite certain it only requires a different arrangement as to the commencement of the Post-office duties in the morning, to give the whole letters out an hour and a half or two hours earlier than at present. The Glasgow and Edinburgh mail, and all communications by these may be here quite well in forty-one or forty-two hours, as they take only forty-two hours to go to their destination at present. Such mails as the Brighton (which is kept back on purpose, being a two-horse mail, and runs about seven miles an hour) might arrive, as the Liverpool mail does, and thus allow the sorting to begin so much earlier, which would simplify and reduce it very much from what it is at present. It must be quite evident, if there were more arrivals into, and more departures in the day from London than one, that the duty would be spread over the whole day, in place of coming on all at one time, with all the great bustle and haste it does at present. The duty in the towns throughout the country is not found heavy at all, in consequence of the frequent arrivals and departures; but were they to be confined to one hour of arrival and departure as here, there would be a great demand for additional hands to get through the work, and I am convinced that the same rule would hold good as to the accumulation of letters at the sorting stations, as for instance, at Huntingdon, Grantham, Carlisle, and other places where the mails are brought to meet in great quantities.

(Foreign Post.—Double Letters.)

Have you any recommendation to offer respecting the foreign post?—I am still of opinion that we ought to cheapen our foreign postage, and that we ought to encourage as much as possible the reciprocal taking and giving of newspapers, and prices current, to the manufacturing interests, and to all those engaged in the different departments of commerce: it would be a very great matter to know at the cheapest rate, and at the earliest time, the state of the foreign markets, so as to enable them to prepare and send away the goods to supply these markets according to the taste of the moment, if I may so speak, in place of the taste of the month or six weeks: and while we continue our charge on double letters, according to the present rule of two pieces of paper forming a double letter, let those pieces be ever so minute, it has been suggested to me both from abroad and many people in this country, that it would be well to give notice throughout the continent that we do so charge our letters, and enable them to know that a single sheet of paper, however light and thin, is here charged as a single letter; but that if that be separated in any way it is charged a double letter, and if it be separated into three pieces it is charged a treble letter. That information would tend very much to increase the present communication between the countries, because it would take off one of the heavy charges which the invariable custom of using envelopes on the continent induces.

(Double Letters.—Inland.)

Would you recommend an alteration in that respect in the inland communication, as to charging by weight instead of the present mode?—My own opinion is confirmed by all those persons who have devoted much of their attention to post communications, that it would be a great convenience, and would not injure the Revenue much, that all letters should, up to a certain weight, be held as single, and above that be charged with extra postage. The intention of which plan is to relieve the Post-office servants of the weighing of each letter; and yet I am told by those who have paid attention to the management of Post-offices abroad, that it is done so quickly (even when there is an immense correspondence, such as in Paris, Berlin, and Vienna, I have heard from persons who have looked at the system in all those places) that it is not complained of, and that the communication is not delayed; the inconvenience to the mercantile interest from letters being charged double on each piece of paper is very considerable; it forces them to put two or three communications, which they can legally do, on the same sheet of paper, and in this way confuses their correspondence; by the returns made by the Post-office, it appears that not more than one-fourth part of the whole correspondence of the three kingdoms are double letters; and when the number sent by the members of both Houses of Parliament are taken into account, which almost invariably are double, the number properly chargeable with double postage amounts to a very few; and when it is again considered, that all parties make a double letter as weighty as they can make it without incurring a charge by weight, it has appeared to me and to many others, that the loss to the Revenue really would be very small if the present system was departed from, and it certainly would take away the temptation which is held out of ascertaining which are money letters, in consequence of the scrutiny whether they are liable to double postage or not.

(Money Letters.)

Do you approve the present mode in which money letters are sent?—The present mode of sending money letters has always appeared to me extremely objectionable, inasmuch as the parties who send them have no means for their being recorded; any letters which are post-paid, whether money letters or not, may be recorded all over the continent on paying a very small addition to the rate of postage; which becomes an insurance as well, because the Post-office become liable for their delivery; and I am of opinion there ought to be in all our Post-offices the same power of registering letters, whether at an additional rate of postage or not, is not for me to decide, but I am clear the power ought to exist. By a statement which I have received from a source which I have no doubt will prove correct, I find that, in the year 1823, a system of registration was established in Ireland, by Sir Edward Lees, with the consent of the Postmasters-General of that country, which was accompanied with great success and much satisfaction to the country, until the Post-offices of England and Ireland were consolidated. The system was then put a stop to in Ireland, and unfortunately has not been established since, nor does it exist in England or in Scotland; that if the statement given me be right, the sum saved in the first year to the public in Ireland, amounted somewhere about £14,000, a considerable portion of which no doubt might have been recovered; but the registering of the letters containing this amount had the excellent good effect of preventing their being detained or the money being abstracted. The gross charge attending the registry is represented to have been under £300 a-year; the whole saving to the Post-office was £1000 a-year, by reason of the difference in the solicitor's accounts for searchers, and for the prosecution of delinquents, for abstracting money from letters in the Post-office; and being intimately acquainted with the system of sending money letters in Scotland, where one pound notes are still legally permitted, and where the practice of cutting bank-notes in two, which was customary in Ireland, is very little resorted to, I have no hesitation in saying, that a very considerable saving to the public would be effected by having a registry established there, besides a saving on the solicitor's accounts. I know that very many complaints are made in Scotland, of money letters being delayed, and money being taken from them, and with the proof before me of the effect in Ireland, I am satisfied it would be a great advantage to establish the system generally throughout the three kingdoms, and that no additional allowance ought to be given to Postmasters or to their clerks, until it has been made quite evident that the additional trouble required more time than they could spare and devote to it. If I have been rightly informed, and I have had the opportunity of seeing a person who had often

taken a share in the registry in Ireland, it is done rapidly, there is no material delay to the persons who bring the letters, and it gave entire satisfaction to the public. I have not the pleasure of being known to Sir Edward Lees, or I should have inquired of him regarding this matter; besides, I did not think it would have been proper of me to put a public officer to such a test, without the permission of the department under which he is placed; Sir Edward Lees being now the Secretary to the Post-office in Scotland, is necessarily accountable to the Postmaster-General for everything he may do.

August 21, 1835.

Mr. Court was called in, and examined as follows :

You are the Accountant-General of the Post-office, are you not?—I am.

In what form do the accounts from the steam-packet stations come up to you?—They come up certified by the agent upon oath; we have the quarterly accounts, and we check the receipts by a daily receipt, which is sent up signed by the agent, the captain, and the steward in most of the stations.

You do not mean that daily account come up to you from the ports?—The daily accounts of the receipts of the passage money do.

How often do the accounts of the expenditure come up?—Only once a quarter.

Have you the accounts sent up of every vessel separately, so that you can see in the quarter how much has been expended upon each steam-packet?—Upon some points you can; the wages and ship expenses are kept separately for each vessel, but the stores, which include the coals, are not separated.

They come up in the gross from each station, do they?—Yes.

What check is there upon that expenditure?—The only check I have, is to see that there are proper vouchers for the payments.

Does anybody look over the accounts before they are sent to your office?—They are transmitted to the secretary in the first instance from the agents.

Does the secretary sign the accounts?—He does not.

They come to your office therefore without any signature from anybody connected with the General Post-office?—Yes, for examination, except the signature of the agents, who verify them upon oath.

What is the nature of the examination they undergo in your office?—To see that there is a proper voucher for all the expenditure, and that the receipts agree with the daily bills which we receive signed by the agent, the captain, and the steward; in some stations it is the mate, and in some the steward.

Of course you do not consider it to be part of your duty to exercise any control over the prices charged?—Nothing over the propriety of the expenditure.

In whose department of the General Post-office do you consider it is to judge of the propriety of the expenditure?—I should suppose Mr. Freeling's.

These accounts come to you without bearing the signature of either Mr. Freeling or any other officer of the establishment, do they not?—Certainly, except the agent; the agent produces a receipt for the expenditure, and if that receipt is in the usual course, then it is my duty to pass it, but if there should be anything apparently out of the usual course, then I submit it for the opinion of the Postmaster-General.

You mean by that if there is anything irregular, not if there is anything that strikes you as improper in the amount of the prices charged?—No, not in the amount of the prices charged, but if there is anything of an unusual nature in the documents that are transmitted to me, then I submit them for the opinion of the Postmaster-General.

No. 13.

Thursday, August 27, 1835.

William Laird, Esq. called in, and examined as follows:—

You are connected with some of the steam companies at Liverpool?—I am not at present, but I have been.

Will you have the goodness to state what the nature of that connection was?—I established the St. George's Company. I was one of the managing Directors for the first four years.

Was that company largely concerned in vessels between Liverpool and Dublin?—They had only two vessels at that time; they carried passengers, no cargoes. I afterwards established a new company for the purpose of carrying cargoes, and after managing that company for eighteen months we united with the City of Dublin Company, who had established vessels of the same description for the purpose of carrying cargoes; then the two became united, and for three years I was a Director of the City of Dublin Company, and took an active part in the management.

This company has been, I think, largely concerned in the steam trade between Dublin and Liverpool?—The City of Dublin Company is largely concerned in the carrying trade. In the month of July last they landed 77 cargoes at Liverpool, and 65 in Dublin. The vessels occasionally went back in ballast. The Post-office vessels pay no dues. The City of Dublin Company in July last, from the first to the 31st inclusive, paid £1267 for tonnage dues, exclusive of pilotage.

Examinations.

No. 13.
William Laird, Esq.
27th Aug., 1835.

Are you well acquainted with the Post-office packets between Liverpool and Dublin?—Yes, I know the character of all the Post-office vessels; more efficient vessels do not exist than they are.

Do you believe that the service would be performed equally satisfactorily, and more economically to the public, by means of contract with any private company?—It could not be performed more satisfactorily; as to the economy of the thing, I am not able to speak to that point. I could state at what rate it could be done. If a company were formed for the purpose of carrying the mails and passengers, it must be an exclusive company for that purpose; it would never do to unite the shipping of cargoes by those vessels. People would not ship by them at times. The Post-office packets go to sea during gales of wind when no private vessels go to sea, and an insurance could not easily be effected on the cargo. When I say no private vessels go to sea in heavy gales of wind, I probably say too much, but it would not be prudent for the proprietors of private vessels to send them to sea in the weather that Post-office vessels put to sea and accomplish their voyages.

You were going to state at what rate a private company could do it.—I think it might be done for £10,000 a year, independent of the passage money. My impression is, that it cannot be done so efficiently as it is done at present for less.

Do you believe that if this contract were proposed to public competition there would be any want of offers from the great companies in Liverpool?—I think the great companies in Liverpool would not take it up, but that a company might be formed for the purpose; all shippers of goods who are proprietors of the City of Dublin Company have a per-centage allowed them off the freight of them that amounts to a profit, besides the dividend they get. Those people would not wish to enter into a new business by which there would be a very bare profit, and considerable risk of loss. I conceive there would be great risk of loss if they were to undertake it at £10,000. The calculation I made for a new company formed to have vessels of 400 tons with 240-horse power engines to enable them to make the average passage in 12 hours, would cost £20,000 each. The four vessels would cost £80,000; the weekly expenses would be £50 for each vessel, or £200 a week for the four. The coals would amount for the 12 months, being 10,950 tons at 10s. a ton, to £5425, that is £15,825. In order to perpetuate this property, suppose a contract was taken for 21 years or a long period of time, it would take 20 per cent. on the first cost to replace boilers and engines, and pay for the insurances, interest, &c., so that a proprietor could run no risk of loss from shipwreck, which would amount to £16,000, and that makes £31,825. I calculate the receipts from passengers would be about £24,000, but I have not attended much to that lately, and that would leave a loss of £7825 to any party undertaking the thing separately. If an opposition came, and though there has always been a good understanding between the Post-office packets and the private companies' packets, yet if a private company undertook to carry the mails they would be opposed, and that would increase the risk of loss considerably beyond the £7800.

There is some agreement at this moment between the Post-office packets and the private companies?—There is. I recommended strongly that Mr. G. H. Freeling should enter into that agreement, and it has prevented much opposition and loss to both the Post-office and companies' vessels.

What is the nature of that agreement?—All the proprietors of the City of Dublin Company's vessels go free in their own vessels, and I recommended to Mr. G. H. Freeling that he should give a free passage to all those proprietors. Each proprietor signs his name when he goes, and produces a certificate of his being a proprietor of the City of Dublin Company, and then he gets a free ticket. That is the arrangement that exists at present.

What is the equivalent given by those companies?—They agree not to take cabin passengers; in short, they have done away with their cabins, and do not take cabin passengers; they have not the accommodation, and they cannot compete with the Post-office packets in that.

That is because they do not choose to compete; they do not fit up their vessels?—They take more freight, and their cabins are less, and in the new vessels they have very little cabin at all.

Do they take many deck passengers?—Yes, they take deck passengers; that is another part of the arrangement: the Post-office packets do not take deck passengers.

In short, it is understood that the Post-office packets take all the cabin passengers and the private companies all the deck passengers?—That is the object.

Is it also part of the arrangement that the Post-office packets shall take no goods?—It was agreed that they should take small parcels, but nothing beyond.

No freight?—No goods on freight.

Are the Post-office packets more powerful than those of the private companies?—They have increased the power lately of two of the Post-office vessels, and they are two of the most powerful for their tonnage out of the port.

Are they more powerful than the vessels used by the company?—Yes.

They are not larger vessels but have more power?—They have more power for the tonnage; all the new vessels building for cargoes will have greater power in proportion to the tonnage than the Post-office vessels have at present.

Are the vessels used by the companies frequently prevented from going to sea by the weather?—In winter, when it blows a gale of wind, they do not go to sea.

And do the Post-office packets go to sea at that time?—They always go.

And do you think it would be dangerous for a vessel carrying freight to go to sea at those times?—Yes, I think there would be considerable risk. No prudent man would send a vessel to sea at the times they go.

Do you think yourself that a vessel that carried freight could not take the mails?—People would not ship goods with a vessel that went out in all weathers; they could not combine the two objects. It may be done, but I always have kept in view to do it as efficiently as it is done at present.

Have the private Companies at Liverpool strictly adhered to that part of the arrangement which prohibits them from taking cabin passengers?—I think not so strictly as it might have been done; they do take them, but they take them at the same rate as the Post-office packets I believe; but no man would go in a common vessel when he could get a Post-office vessel to go in. It is like going in an omnibus and a mail coach.

We observe that in the report of the Select Committee of the House of Commons who sat upon the Post-office communication between Great Britain and Ireland in 1832, it is stated that the City of Dublin Company had not only infringed that part of the agreement which forbade them to take cabin passengers, but had charged only 12s. 6d. for the passage of a cabin passenger at the time when the Post-office packets were charging £1 7s. 6d. Are you aware whether this is a correct statement of what then took place, and whether any alteration has taken place since?—I think it was understood by both parties, the Post-office and the City of Dublin Company, that if any opposition or a third party came in, that each should do the best they could to drive a third party off. Now at present they take passengers for 5s. I understand.

Who?—The Company. There is a third party come in to oppose the Post-office packets, and the city of Dublin packets.

What Company is that third party?—It is a vessel from Scotland called the Fingal, a single vessel.

But the Post-office packets, notwithstanding any infringement that has taken place on the part of the private Companies, have always taken the proprietors of those private Companies over?—They have.

Are those proprietors very numerous?—I am not aware of the number: there are I should think 30 or 40 weekly.

It is stated in this report that 5766 passengers have been taken over free of charge in their quality of proprietors of the City of Dublin Company by the Post-office packets from the year 1827 up to the 5th of April, 1832; does not that imply that they are a very numerous body?—They are a very numerous body, but I had no idea that so many crossed as that.

And that the expense of this to the public has been £7928?—I am not aware that it had been to that extent.

It is stated also in this report that in 1832 the gentleman who was agent for the Post-office Liverpool packets to Dublin was also the agent for the St. George, Dublin and Liverpool Steam-Packet Company, and a director and proprietor of the City of Dublin Company?—Yes, that is Mr. Pim.

It is correct, then, that that gentleman fills these different situations?—It is, I believe.

Is that so still?—I am not aware that it is. I have not been connected since 1831 with either of the Companies.

Do you know whether it is so, or is it not?—No, I do not. The reason I withdrew from the management of the Company was that I established a boiler manufactory, and I could not as a Director of the Company pass my own accounts. I resigned the salary, which was £400 a year, on purpose that I might be at liberty to tender for work to the Company. A great many cattle dealers are owners of this Company, people who come to market generally once a week. They come over in the Company's vessels, and go back in the Post-office vessels. Before this arrangement was entered into, whenever a Post-office packet started, the private Company had one to go along with it, and if they lowered their rates to 10s. the private Company lowered theirs to 5s., and the consequence was that the Post-office packet could not get a single passenger.

You said that the Post-office packets are superior to the Company's?—For passengers their accommodations are superior.

What then has the Post-office packets to fear from a competition with the Company's packets?—A man would put up with inferior accommodation, if he were to pay only 1s. instead of £1. All opposition to the Post-office packets was withdrawn; the Post-office packets were put on this station after it had been occupied by the private Company, and then the Company entered into this agreement with the Post-office. It was a very profitable agreement for both parties. It makes a difference of £10,000 a-year in the receipts from passengers.

When the Post-office packets were first established at Liverpool, do you know whether any attempt was made to get the service done by contract before they were established?—I think the Companies were applied to.

Did the Companies make any offer?—They did offer through Sir Henry Parnell.

Do you know what Company made that offer?—The St. George's Company.

Do you know what that offer was?—I do not know. At that time the St. George's Company had vessels quite equal in point of accommodation to the Post-office packets; two of the commanders of the packets of the St. George's Company are now commanders of the Post-office packets. Those vessels are done away with now, and the other vessels are built purposely for carrying cargoes.

Are the Post-office packets better manned than those of the private Companies?—I think not; they have not a greater number of men. Private vessels require more men to take in and put out the cargo.

Do you remember what the St. George's Company paid to the captains of that large class of steam-boats you speak of which were equally good with the present Post-office packets?—

Examinations.

No. 13.

William Laird, Esq.
27th Aug., 1835.

I think they paid 200 guineas a-year, and they had perquisites besides, and all the benefit arising from the cabin.

What do you consider the situation then to be worth, including everything?—About £400 a-year. My own impression is the Company's captains were nearly as well paid as the Post-office.

From what you have stated, the situation of the commander of one of these vessels under the St. George's Company was not £500 a-year?—No, I think not.

Is it not a great deal more than that under the Post-office system?—They have an allowance for each passenger, I believe.

Will you have the goodness to look at that return? If that return is correct, would it not prove that what is received at present by the captains of the Post-office packets is about double the sum which they would have had when they commanded packets of the same description for the Dublin Company?—I should think so; I had no idea of such a return as this. I do not know what they find, or what expenses they are at.

I suppose you are well acquainted with the system of management which was pursued by those private Companies to their steam-vessels?—Yes, I was well acquainted with it.

When a steam-boat required any considerable repairs, what was the way in which it was done?—The two great Companies in Liverpool have establishments of their own.

Private yards?—Private yards, and their repairs are all done there.

When they built their steam-boats, were they done in their own yards, or built by contract?—Built by contract.

Were the boilers supplied by contract?—The boilers and engines were supplied by contract.

Can you state at what rate those vessels were built, at how much per ton?—I can state what the present price is, and what the price at that time was. I think a vessel complete, including hull, spars, rigging, and cabin completely fitted, would cost £22 per ton, independent of the boilers and engines; not per registered ton, but the entire tonnage of the vessel. While I was in the City of Dublin Company, the cost of all new vessels averaged £45 per ton, including machinery and every thing complete.

How do you procure the machinery; is that by contract?—By contract. I consider there are about five first-rate manufactories; we have had most from Fawcett and Company, of Liverpool. We have had from Boulton and Watt, from Maudslay, and lately we have had from Forrester, which is a new concern, but they make very good engines; and Robert Napier, of Glasgow. I consider these are the first engineers in the kingdom for marine engines.

Do I understand you to state that the Dublin Steam Company is at this moment taking cabin passengers?—They are taking cabin passengers at this time.

Do you know at what rate?—I think they are taking them at 5s. each since this opposition came in, that was about three or four months ago.

The Post-office packets, I suppose, continue to take their passengers at £1 7s. 6d.?—I think a guinea now; it is reduced.

Do many passengers prefer to go by the Post-office packets, paying the guinea, instead of going by the private Companies' packets where they go for 5s.?—The Companies' vessels take very few cabin passengers at present, even at that low rate.

How do you account for that? Because the vessels are crowded with the harvest-men going over, and they bring over a cargo of pigs, and before the pigs are well out, and the decks washed, the passengers are on board.

Notwithstanding this difference of price, you believe, practically, the Post-office packets take the greatest number of passengers still?—At that low rate they still take five-sixths of all the passengers.

How do the private Companies procure their stores at Liverpool; is that done by contract?—All by contract.

Their coals and their stores?—Yes.

Do you remember what was the price per horse-power that you have generally paid for your engines?—From £40 to £50, but Boulton and Watt have charged rather higher than others. No good engines are to be got under £40, and I think the best may be had now for £50.

When the engines are put in the vessel, has it ever been your practice to contract for keeping in repair?—We have never done so, but if I were allowed to recommend to the Post-office, or to Government, I should certainly recommend to contract with parties who would undertake to build vessels when required, and those vessels to be kept in complete repair, with new boilers, and all repairs done to the engines, for about ten per cent., excluding accidents and the sea risk.

The ordinary wear and tear of the engines would be kept in repair for about ten per cent.?—On the prime cost. The City of Dublin Company do everything on the most economical plan, and their repairs are about that; they may exceed it a little, but very little more than 10 per cent. on the first cost of the vessel and engines; that would keep the whole in repair. On one station I would undertake to find a party who would complete the vessels in the most efficient manner, and keep them in repair, including engines and boilers, for 12½ per cent. on the first cost per annum, and that would be the most economical plan, I presume.

Do you think a contract could be made to keep a steam-boat generally in repair?—I include every thing connected with the vessel and engines, taking out and putting in new boilers when required; the only difficulty I see in it would be, the person undertaking to do this must have his own engineers and his own firemen on board, and then they are accountable to him for the care they take of the engines and boilers.

Have the Companies any contract to keep their steam-boats in repair?—No, they have not: a great part of the work is now done at Holyhead for the Post-office packets, but we have made

several boilers for them, and kept some of them in repair for twelve months; we guaranteed them for twelve months without any charge. We sometimes undertake to keep our work in repair, exclusive of accidents or carelessness, for twelve months.

In the event of any arrangement being made of the kind you recommend, the course you would propose is, that there should be an establishment at Liverpool to repair the Liverpool vessels; they would not have to be sent to any distant point?—It would be done at Liverpool. We have a manufactory, where the vessels come alongside and lay there; we make boilers only, but when repairs are doing Boulton and Watt's men come down, and we give them the use of our tools, and they repair them at our manufactory.

Do you conceive that in such a contract there would be a security that good materials and good work would be employed, that the public might be secured?—The very best of every thing; it would be the interest of the contractor to put the best.

Did not the St. George's Company take a contract for carrying the mails between London, Hamburgh, and Rotterdam by steam, in 1832?—I have understood so.

And subsequently gave up that contract to the General Steam Navigation Company?—Yes.

Are you acquainted, or do you like to state, the circumstances which led to their giving up that contract?—They were very well paid for it.

By the General Steam Navigation Company?—They paid them a sum of money.

The contract was considered a very advantageous contract?—I think I may give a reason which will explain the case. The General Steam Navigation Company were very much alarmed at the idea of the St. George's Company sending their spare vessels over to occupy one of their best lines, and they were induced to pay them a handsome sum to give up the contract.

Did you ever hear that a great rise in the value of the shares of the General Steam Navigation Company took place immediately after their taking this contract from Government for conveying the mail to Hamburgh, and Rotterdam?—I am not aware of that; I have had very little communication with the General Steam Navigation Company; their shares are selling very well at present I believe.

Do you believe any of the Liverpool Companies would be disposed to offer for the contract for conveying the mails between Liverpool, Hamburgh, and Rotterdam, which expires this year?—None, except the St. George's Company; they have vessels now from Hull to Hamburgh.

No. 14.

Saturday, August 29, 1835.

Mr. George Duncan, Dean of Guild of Dundee, was called, in, and examined as follows:—

You are connected with one of the principal steam companies of Dundee?—Yes.

What is the name of your company?—The Dundee, Perth, and London Steam Company.

Are the vessels employed by your company very large?—The largest upon the east coast, with the exception of the Monarch.

They go from London to Dundee?—Yes, and from Dundee to London.

Do they do that at all times of the year?—At all times of the year.

What is the size of your vessels?—620 tons.

Are you acquainted with the steam communication between London and Rotterdam and Hamburgh?—I have gone to Rotterdam by steam from London.

Where have you been in the habit of building your ships?—In the Clyde.

Are you able to state at what rate per ton they are built?—We contract for the vessel out and out, completely furnished with everything. The vessels cost us about £20,000 each when put to sea quite complete.

Were they built in a first-rate manner?—A first-rate manner, I should think superior to any other vessels, so much so, that were the company to build any other vessel I think we should adopt the same method and employ the same contractor.

Who was your builder?—Mr. Robert Napier, of Glasgow, was the contractor.

How long has the company been established?—Upwards of sixty years; but we adopted steam about two years ago. Those vessels have now run since April, 1834, and they have never been an hour off the passage since that time.

Have your company ever made an offer for the Post-office contract, to convey the mails to Hamburgh and Rotterdam?—Never; we build our vessels solely for this trade.

Do you think there would be any disinclination on the part of the company to engage in any such contract?—We could not possibly take our vessels out of the trade we are embarked in now.

Is yours the only steam company to Dundee?—Yes.

How many men have you on board one of those large vessels?—Altogether, including the stewards, we have about twenty-eight men.

What do you give the captain?—£180 a-year.

Has he any perquisites besides?—No perquisites.

What description of person is the captain?—He is a thorough seaman, a man who has been brought up as the master of our sailing smacks. He served his apprenticeship with our vessels, he has been in the company's employ about forty years, and the other master has been about twenty-five years. The company had sailing smacks before they adopted steam, and they now have sailing smacks in conjunction with the steamers.

Examinations.

No. 14.

Mr. Geo. Duncan,
29th Aug., 1835.

How do you manage the supply of coals?—We have all our coals brought from the Firth of Forth to Dundee.

Do you make a contract for the supply of coals?—We do, at so much a ton.

How do you manage for the repair of the engines or the vessels?—Those vessels have run now seventeen months, and I believe they have never cost £10 of expense for repairs of the engines since we have had them.

Of course as time goes on they will require more repairs. On what system do you propose to conduct those repairs?—We have a graving-dock in Dundee of sufficient magnitude to take those vessels into, and we shall employ our own carpenters in Dundee to repair them in our own dock.

You prefer that plan to repairing them by contract?—Most assuredly. When I was appointed by the company to report on steam, I was deputed by the directors of our company to get information respecting the expense of keeping up steam-vessels, and the idea now suggested, I thought of at one time, and made inquiry of several engineers what they would take to keep up the engines, and I could not get an offer under £800 a-year, to keep up our engines. We have now run seventeen months, and they have not cost us so many pounds for repairs.

What is the power of your engines?—Our cylinders are 59 inches, equal to about 130-horse power each, the two engines about 260-horse power.

Have you ever turned your attention to the subject of the manner in which the steam service of the Post-office is conducted?—I have often thought of it.

Are there any points connected with that service upon which you are desirous of making any observations to the Commissioners?—Properly speaking, I can have no interest in the thing. I should suppose that a contract might be got by the Government from efficient individuals to carry on the Post-office department.

You have no doubt that companies composed of persons of character and capital would be ready to undertake the conduct of the Post-office service?—I have not a doubt of it.

Do you think your company would be willing?—Were it at all in our line to do so, if it were to carry the mails from London to Dundee, we would be happy to take it, at a low price, but we could not put our vessels out of that trade to take up a different route; but I am perfectly convinced that there are many individuals that would be extremely happy to offer for it.

The disinclination which you express to have anything to do with the Post-office service mainly depends upon the circumstance of Dundee being out of the way of any Post-office station?—Nothing else. We shall be happy to go a great deal out of our way to have a connexion with the Post-office; for instance, we shall be happy to take the mail to Dundee, which we could do all the year round upon an average of about forty hours, and the mail now takes fifty-two hours. In twenty consecutive voyages which have been made with our vessel, we have done it at eleven miles and a third an hour, or rather under forty hours for a distance of about 470 miles, summer and winter.

You have occasionally crossed the water to Rotterdam in the Post-office steam-packets?—Yes, I have gone by steam.

Do you conceive that those packets are a proper description of vessels for the purpose?—I should not say that they are vessels of the same class as our vessels to Dundee by any means, they are very inferior. I have not gone in the vessels that belong to the Steam Navigation Company just now, it was before the establishment of the present arrangement of the Post-office. The Queen of the Netherlands was at that time upon the station.

No. 15.

Wednesday, September 2, 1835.

Mr. Robert Napier was examined as follows:

No. 15.

Mr. Robert Napier,
2nd Sept. 1835.

You are an engineer at Glasgow?—At the Vulcan Foundry, Glasgow.

In that capacity have you been extensively concerned in the construction and repairs of steam vessels?—Yes.

Have you been engaged in this business for many of the companies on the Clyde?—Yes.

Have you had an opportunity of observing the vessels that are employed by the Post-office?—Not particularly. I once crossed at Holyhead, and twice at Port Patrick.

What opinion did you form of those vessels?—I thought the Holyhead vessels very good. The Port Patrick ones I did not like so well.

In what respect did you consider the Port Patrick ones insufficient?—They appeared to me to be short of power.

As compared with the size of the vessels?—Yes.

Of late years the practice has been to increase the power in steam-vessels compared to the size of the vessel?—Yes; the practice of late years has been to increase the power. It is probably the greatest improvement that has taken place, experience having shown that steam-vessels with ample power, according to their tonnage, are not only more profitable in a mercantile point of view, but are in every other respect much better and safer vessels than those having little power compared to their tonnage.

What would you say is the proper proportion between the power of the engines and the tonnage of the vessel?—It is hardly possible to give a correct or fixed data; the proportion of power ought to vary according to circumstances, depending on the nature of the trade, form of the hull of the vessel, and kind of navigation in which she is to be employed. I would, however, as a general rule say, the power should very seldom (if ever) be less than one-

third of the total tonnage, and probably never should exceed one-half, unless for some special purpose.

In what manner do these steam companies by whom you have been employed manage—do they contract with you for engines?—In some cases they contract with me for the engines only, but in general they contract with me to furnish the vessels and engines finished and ready for sea. In this manner I have contracted and furnished companies with the following vessels, viz., the Dundee and Perth steam-ships, from Dundee to London; the John Wood, Vulcan, and (New) City of Glasgow, from Glasgow to Liverpool; the Queen Adelaide, Isabella Napier, and Robert Napier, from Londonderry to Liverpool; the Coleraine from Port Rath to Liverpool; the Mona, Monas Isle, and Queen of the Isle, from Isle of Man to Liverpool; the Menai, from London to Newcastle; the Elbe, from Hamburg down the Elbe; the Tamar, Van Diemen's Land; the Sovereign, from Aberdeen to Leith; and the Duchess of Sutherland, from Inverness to London: these and many more for various other places were entirely completed by me.

Do they also contract with you for keeping those engines in repair?—In general I recommend the parties for whom I make engines, not to contract to keep them in repair.

Why do you think it would not be an economical and good system for any company to keep their vessels in repair by contract?—My opinion is, that if engines are properly made at first, they will in general require very little repair for some years, provided they are managed with proper care and attention on the part of those having charge of them. If an engineer was to contract to uphold and keep in good and sufficient repair engines and boilers, say for five years, he would require to get such a sum annually as would cover the extreme risks he might run, from having the engines and boilers injured by carelessness or neglect, on the part of those having charge of them; and on the other hand, if the engineer was more anxious about making money than of keeping the machinery in an efficient and complete state of repair, he might manage to keep the vessels moving at comparatively little expense to himself; but at the end of five years the machinery might be left in a very bad state, and would probably require a large sum of money to put it into a complete and efficient state of repair again.

Do not you think if the contract was formed with persons of established character, that that would be a sufficient security against anything of that kind?—I have no doubt it would; and for Government and other large public bodies, who are obliged to leave the management to persons who have no personal interest in the vessels; it might be a very beneficial thing for them to contract for the repairs, and with a person of character they would be quite safe, but for private individuals or companies, who attend to their own interests, I am convinced it is cheaper to take the risk themselves; for instance, the Dundee and Perth steam ships have plied regularly from Dundee to London for about eighteen months, and I am informed they have not cost the company eighteen pounds for repairs to the engines or boilers during that period. If they had contracted with any engineer to have kept them in repair, they would not have got it done probably for less than £1000 per annum for each vessel; and any neutral person taking the risk would, I think, be entitled to that sum.

Do these vessels run summer and winter?—Yes, summer and winter; and sail regularly on fixed days from Dundee to London, generally with heavy cargoes, and they have never lost a passage from the time they first started. The average rate of their steaming for ten weeks previous to December, 1834, was at the rate of $11\frac{1}{2}$ miles per hour, having sailed 19,200 miles in 1683 hours, as taken from their log-book; and they still continue to keep up their character for speed, and good sea-vessels.

What is their power?—About 240-horse power.

What is their tonnage?—About 620 tons.

What was the whole cost of each of those vessels when completed?—They were done very cheaply, much lower than they can be done for now, viz., about £20,000.

At what rate could you offer to do them again?—From £24,000 to £25,000.

Did you put Morgan's paddles?—No; common paddles.

Do you recommend them in preference?—Yes, I recommend common paddles in preference to any other I have yet seen—at the same time I think the action of Mr. Morgan's paddles very good. But I am of opinion that from the number and complication of their parts, they are easier injured, and more difficult and expensive to repair than the common wheels. On that account I do not think them so well suited for vessels on foreign stations that are often coming into rivers, or alongside of quays, &c., as the common wheel, which is simple, and easily repaired.

The difficulty of repair is the great objection?—That is my principal objection.

Is there anything peculiar in the construction of your engines?—Nothing particular.

Are the engines you construct what are called expanding engines?—In general they are more or less so.

What advantage do the engines constructed on that principle possess over others?—A saving of fuel and steam is effected, varying in quantity according to the extent the expanding principle is carried to.

Do you know at what rate per ton steam-vessels are usually built at in the Clyde?—That varies very much according to the size and quality of vessels wanted.

What is the general rate per ton of vessels constructed in the best manner and for the roughest passages?—The ship-carpenter's work, exclusive of joiner's work and cabins, will average about £14 per ton, for merchant steamers.

That is of course exclusive of the engines?—Yes; exclusive of the engines, and all furnishings for the vessel of every kind.

If you add the engines what would be about the cost per ton?—A good merchant vessel complete with masts, sails, rigging, anchors, and cables, cabins, and the engines, may cost about £40 per ton.

Examinations.

No. 15.

Mr. Robert Napier,
2nd Sept., 1835.

Examinations.

No. 15.
Mr. Robert Napier,
2nd Sept. 1835.

Do you include cabin furniture?—All fixed furniture; but no moveables or steward's furnishings.

You make all the cabin part very splendid, do you not?—Yes; in general I do.

Do you think any of the steam companies in Glasgow would be inclined to undertake a contract for the conveyance of the mails?—I think they would.

Do you apprehend it would be necessary for them to have a separate set of vessels for that purpose, different from those they employ in the carriage of goods?—I feel perfectly satisfied the mails could be conveyed with equal speed, and certainly by vessels carrying a moderate cargo. In proof of this I may instance the Liverpool and Glasgow and Dundee and London steamers: some of these vessels perform their passage without reference to the state of the weather, as regularly as it is done by the Liverpool and Dublin mail-steamers; and though carrying cargo, are not beaten by the fastest of those vessels in the worst weather; but on such a station as Liverpool and Dublin, I would suggest that it might be for the public good if the present mail-steamers were hired out to any company contracting for this mail, for a period of perhaps twelve or eighteen months, so as to give the contractors time to construct vessels, that would assuredly keep up the communication as regularly as at present.

Do you think merchants would be disposed to entrust their goods in vessels that sailed in all weathers, in the manner the Post-office packets do?—Yes; they always prefer vessels that sail regularly, whatever the weather may be. The steamers between Glasgow and Liverpool and those on many other stations sail always on fixed days, summer and winter; and are as regular in departure and arrivals as it is possible for any of the mail-packets to be.

Do you not think the price of insurance would be higher?—No; not one farthing.

Do you conceive that the merchants would prefer vessels for freight that are obliged to sail whatever may be the state of the weather?—Yes; I am certain they would.

Do you think the mail could be conveyed in a regular manner by steam-boats from Glasgow to Belfast?—Yes.

And Londonderry the same?—Yes.

From your knowledge of the steam communication between Glasgow and Belfast, would there be any difficulty in contracting for carrying the mails?—No; I think there would be no difficulty.

Would the same company undertake the Liverpool mail also?—If they did not, another company could be got to do it. I however do not think it would be a prudent plan to carry the mail between Liverpool and Glasgow by steam-boats, unless it was by a separate bag to Greenock; the time taken by steam to Glasgow being nearly the same as by the road.

If it were the wish of Government or the Post-office to contract anywhere, do you think that a company could be got that would contract for carrying the mails from other places?—Yes; I am of opinion there would be no difficulty.

Would they contract between Liverpool and Dublin?—I think parties might be got who would be willing to contract for these stations, or for any other station.

What length of time would it be necessary for a company to prepare boats for the execution of any such contract?—That would depend on the number of vessels required; twelve or at any rate eighteen months' notice would give ample time to make preparation. The Belfast and some other stations might be taken up immediately by the vessels now on the stations.

What length of time do you suppose it would take for the Clyde Company, for instance, to undertake the contract for the conveyance of the mails from London to Hamburgh and Rotterdam?—It would depend on what time proper vessels could be picked up, and the number of vessels required.

Suppose there were four vessels required for each, how long would it take to have eight good vessels ready?—It would take from twelve to eighteen months to get proper new vessels prepared; but if the Post-office was to charter their present vessels for a time, till other vessels were built and got ready, the contract could be entered upon in a very short time, and commenced upon most of the stations.

Is the profit of steam companies considerable?—Some of them are very low—others pay a fair per-centage.

In case a contract were entered into by the Post-office with any of those companies for the conveyance of the mails, what do you conceive would be the terms for which it might be advantageous to the public that the contract should run?—I do not think you could get companies to go into it except for a contract of some duration, probably five or seven years.

Do you think five years would be long enough?—I think you might get contracts undertaken for that time.

No. 16.

September 2, 1835.

Mr. Charles Wood was examined as follows:—

No. 16.
Mr. Chas. Wood,
2nd Sept. 1835.

You are a ship-builder on the Clyde, are you not?—Yes.

Have you been extensively concerned in the construction of steam-boats?—Yes.

Of the hulls or the whole?—Of the hulls of steam-vessels. My practice has been confined to that.

Do you build for any of the great companies on the Clyde?—Yes; the principal large vessels I built were the James Watt, for the London and Edinburgh Company, and the Duchess of Sutherland, for the Inverness Company.

Did you build those vessels by contract for the companies?—Yes.

At what rate are the contracts generally made?—About £13 a ton, that is fir plank; oak would be £2 or £3 a ton more.

Does that include the fitting up of the cabins?—No; exclusive entirely of the cabins, and cordage, and sails, and of internal fittings, entirely exclusive.

Do you put them in?—No. We sometimes do, but very seldom. There are several other vessels besides those I have named which I have built.

Are the vessels on the Clyde oak, or fir?—Generally fir; at present we have built them planked with oak, but of late only with fir; partly for economy, and partly for lightness.

In what way are the vessels built that go between Glasgow and Belfast, are those constructed of oak or fir?—Oak frames and fir plank.

Do you think that the best construction of steam-vessels?—I would not say the best, but equally good with the oak, and probably a little better from lightness. Fir cannot be quite so strong as oak, but it is sufficiently strong.

What difference does it make in the price whether it is built wholly of oak, or partly of oak, or wholly of fir?—If I understand the question, from £2 to £3 a ton additional to make that part of the planking, which is generally of fir, of oak.

When you talk of £13 a ton being the usual price at which the hull of a steam-boat can be built, are you speaking of a steam-boat built wholly of oak, or partly of oak, or wholly of fir?—The frame wholly of oak, the upper part of the planking of fir, the internal planking of fir.

Do you repair the steam-boats for any of the companies?—At present I am not concerned with any repairing business; my brother does repair them; I have been frequently engaged in repairing them.

Do the companies on the Clyde repair them in their own yards, or do they have them done by the builders?—They generally send them to the builders' yards to repair.

That is paid for by the job, is it not?—They seldom contract for the repairs by a specific sum of money, but they pay by the quantity of materials, and the quantity of labour on them.

What is the whole present price at which a steam-vessel can be completed on the Clyde, engines, and fittings, and everything?—I do not know, indeed.

Do you know by the ton?—No.

Does the shape which is required for the hull materially affect the price per ton which is paid for that?—Very materially. I can name three instances in the last year. Three vessels, I contracted for them at a certain breadth; but in anticipation of the improvement of the law for measuring, I gave one three feet, another three feet, and another a foot and a half additional beam, I may say almost for nothing, for a trifling consideration. From their model these vessels were increased considerably in tonnage without a corresponding increase of price. For example, one of 500 tons I could give very nearly for the price of a 400 ton ship. A still more striking instance than that, the *Monarch*, I gave the design and made the bargain with the builders as the surveyor of that ship; we contracted for a ship of 600 tons, and for an advance of £500, the tonnage was changed to 900 tons. That is the nominal tonnage, and that sum would more than repay the builder.

Have you built any vessel going from Glasgow to Belfast?—One, the *Arab*.

Are those vessels regular in the times they make their voyages at all periods of the year?—The best class of them are very regular, they go almost against any weather.

Are you aware in those Belfast vessels what is the power of the engine as compared with the tonnage of the vessel?—About a horse power to two tons.

Do you believe that proportion to be what is generally considered the best for sea-going vessels?—Very good; if a vessel is going to carry a great quantity of coals, she is not the worse for having less power to her size or capacity so as to let her skim the water; in other words, if a vessel is to be heavily laden, it is better she should have good length and breadth.

In addition to my evidence given, when examined by the Commissioners, a few remarks have occurred to me. The price per ton of ships is the most vague thing in the world. About two months ago, I had made an offer for building a steamer of 700 tons, a very long, broad, low, light vessel, to go in little water, the price £6 10s. per ton; this is a good paying price, and I expect to build her: another steamer, about the same nominal tonnage, was proposed to me, for this I declined giving a decided offer until I had first seen that all points were right and agreeable. But I stated that on finding this, and among other things on condition that the clause with regard to an overseer should be expunged, and the duty of overseer entrusted entirely to myself without appeal, that I was ready to make them an offer at £20 per ton. The vessel has been taken at £14 per ton by another, and I am glad I am quit of her. The Clyde builders I consider are well deserving of the encouragement of a trial on the ground of superior model and work, but I do not think any saving can be offered by them in price below the Thames builders as they have been working.

No. 17.

Wednesday, March 16, 1836.

Charles Wye Williams, Esq. was called in, and examined as follows:—

You are connected with one of the largest steam-packet establishments in England, are you not?—I am.

What is the name of it?—The Dublin Steam-Packet Company; it is the first that was established for the conveyance of merchandise across the channel, and the first that undertook winter service for that purpose.

No. 17.

C.W. Williams, Esq.
16th March, 1836.

Examinations.

No. 17.
C.W. Williams, Esq.
16th March, 1836.

You are acquainted with the Steam-packet establishment in Liverpool, are you not?—
I am.

Do you suppose that if the Post-office were inclined to contract for the carrying of the mails from Liverpool to Dublin, that tenders would be made by Companies that at present exist for that purpose?—I have no doubt that tenders would be made for carrying the mails.

What is the class of vessels that the City of Dublin Company have now?—The City of Dublin Company have vessels of all descriptions, those that they are at present constructing are of a much larger class than they have hitherto had; they have just built two of near 200-horse power each, and the four additional ones they are at present constructing, are to have engines of 250-horse power each; two of which have been directed to be constructed in a way peculiarly applicable to the Post-office service, in the event of any change in that service taking place.

Are they considerably larger than the packets at present employed by the Post-office?—
Considerably larger.

What is the size of the Post-office packets at present?—The largest power of the mail-packets: the Dolphin is 160-horse, or 180; they have added latterly to the power, and I believe now it is 180.

On what sort of conditions would a company be willing to contract for the carrying of the mail?—That would in a great degree depend on the conditions to be imposed by the Post-office. The persons undertaking the contracts must bind themselves to place at the disposition of the Post-office agent, daily, an approved-of vessel for the service, that would be a main condition.

And at a specified hour?—Yes.

But you conceive that even binding the companies to give them a particular hour, that tenders would be offered for carrying the mail?—I do.

Do you consider it desirable that vessels of a superior size should be put upon that station?—Certainly; two of the present mail-packets would answer, but the remaining two are conceived generally by the public now to be inadequate, though at first they were not so; and that impression has arisen out of the change of public feeling as to the size and power.

You have stated that public opinion has changed with regard to the increase of power of steam-vessels, will you have the goodness to explain to what it is you ascribe that change in public opinion?—The public impression now is so much in favour of saving time, particularly in case of adverse weather, that the owners of steam-vessels, even for trading purposes, think it better to fall in with the public feeling, and therefore, though more expensive, increased the power of their engines considerably, and all the new steam-vessels that are now building are contemplated to have a much larger power than even twelve or eighteen months ago was thought advisable.

Do you mean that the power is greater than it used to be in proportion to the tonnage of the vessels?—I do; but still the tonnage of the vessels is increased in a relative proportion.

Is that increase of the power in proportion to the tonnage found to be more economical?—It is more economical on the whole; it may not be more economical upon a particular voyage; but, the greater efficiency of the vessels, the saving of time, and being enabled to make a greater number of voyages: these circumstances I conceive make it more economical on the whole.

Is that saving to be attributed chiefly to its attracting passengers more, or is it a saving in point of time?—It is not alone the attracting of passengers, it is a saving in point of time and tides; because the saving a single hour may be very important with respect to tide.

In the consumption of fuel, in what way is that affected upon that point?—In the consumption of fuel I rather think there is no difference; if any, perhaps it is in favour of large engines, because although there may be a larger quantity of coal consumed per hour, yet upon the whole, considering the saving of time, I think it is more economical to have a large power; besides, we have improved our boilers in such a way that less fuel is now used in large steamers than we before contemplated.

How does the principle of increased power apply to the general wear and tear of the vessel?—If the vessel remains afloat at low water I do not consider that there is any increase in the wear and tear upon the vessel from the additional power, provided that the vessel be built originally with a view to that increase of power: but if the vessel has to take ground each tide, as is the case in Dublin river, the increase of power and the increase of the size of the vessel, are materially injurious, and that was perhaps one of the reasons why steam companies were so long before they thought of coming to the increase of power.

You stated, in the year 1834, that the proprietors of steam-packets would not, in your opinion, be disposed to perform the Post-office service between Liverpool and Dublin as well as it was done by the public establishment; how do you reconcile what you said then with what you say now?—I do not think I said that; I said if they were to be obliged to have separate vessels, vessels built specially for the purpose, they would not be disposed to do so. I said we had not the same control over our commanders, because they are not under the same control as gentlemen belonging to the military and naval service; we cannot get that degree of discipline on board private-owned steam-vessels. I have not said anything in my examination in 1834 that is not applicable now.

You are then of opinion that it would be indispensable to the proper performance of that service, that even if the vessels were taken by contract they should be put under the command of naval officers appointed by the government?—I do think so: upon the mere ground of having the service done in the most efficient way, I would prefer naval officers being employed for the command.

No. 18.

16th March 1836.

George Louis, Esq., was called in, and examined as follows:

How many hours is the mail in going from London to Milford?—It leaves London on the Monday at night and gets to Milford, I think, about three or four o'clock on the Wednesday morning, that will make the journey about thirty-one or thirty-two hours; it reaches Milford in about thirty-one hours and a half.

At what hour does the mail get to Carmarthen?—It gets into Carmarthen somewhere about eight o'clock on the following night making the journey about twenty-four hours. This mail has been expedited very considerably of late.

That leaves about eight hours to go to Milford?—Yes.

Have you turned your attention at all to what the improvements will be when the new road is made to Hobbs' Point?—The great difficulty I have always considered about that road is the bringing up of the southern correspondence, because that gets to Bristol in the morning; it has been a difficulty which we have always been endeavouring to remedy if we could: the correspondence is very considerable that comes from the Portsmouth line.

Does that line join at Carmarthen?—Yes.

But the London mail has a mail for Bristol as well?—Yes.

Is there no way of bringing the Bristol mail in time for the London mail?—There is no way of doing that except you cut off the correspondence between London and Bristol for the South of Ireland, and also for the towns between Bristol and Milford; and the same would be the result with the letters brought up by the Portsmouth mail. I am not quite prepared to say that some improvement might not be made in the Portsmouth mail.

The letters from London to Cork go round by Holyhead, do they not?—Yes.

Why is that?—Because it is the quickest mode of conveyance.

Why is it the quickest? Is it the quickest on account of the certainty as regards the correspondence?—It is on account of the greater certainty.

You have stated that there is a mail at Carmarthen; is there any mail at Milford? When the mail arrives there, do the packets start immediately?—There is no delay there, it starts at four.

Is there any delay at Waterford when the mail arrives there?—I have got the care here of the Waterford and Limerick mail; it is dispatched for Limerick at a quarter past nine o'clock in the evening, and the correspondence falls in with the Dublin and Cork mails at Clonmell and Caher.

The Commissioners are desirous to call your attention to the following paragraph in the Report of the Select Committee of the House of Commons, on the Post-office communication with Ireland, which sat in the year 1832, and is in these words: "The Committee, therefore, recommend that the direct Milford Haven mail from London should not be detained at Carmarthen, in future, for the arrival of the Bristol mail. The letters brought by the Fal-mouth, Portsmouth, Liverpool, Birmingham, and Bath mails, to Bristol, as well as the Bristol letters, to be dispatched from Bristol at an early hour in the morning so as to meet the Milford mail at Ragland or the most convenient point of the main road. The Portsmouth mail would probably require to be brought into Bristol one hour earlier than at present; this mail alone would require acceleration in order to carry the proposed alteration into effect." Will you state to the Commissioners any observations you have to make upon that recommendation; or what have been the difficulties that have been found to prevent its being carried into effect?—The difficulties, I think I may state, that have operated to prevent its being carried into effect, or one of them at least, is that of getting the contractors out of Bristol to work a mail-coach independent of the London one,—that is one of the difficulties, though I do not know it of my own knowledge.

That resolves itself into a question of expense, does it not?—It resolves itself into a question of expense, because I dare say that for a large sum they would do it.

Do you conceive that the expense would be very considerable?—I think it would.

Can you state any other difficulties to the Commissioners?—The other difficulties are the cutting off the communication of the towns between London and Bristol, and those between Bristol and Milford, including Milford; also the communication of those towns between London and Bristol and the South of Ireland. Then there is the question of how the towns between Bristol and Carmarthen, including Swansea, are to be served with their London letters: another mail must follow to effect this object.

Could they not get them by the Gloucester mail?—It must be a special mail to follow the other.

Why could they not go by the other?—Because that would have started from Bristol before the London mail had arrived.

No. 19.

Thursday, 14th April 1836.

George Louis, Esq., was further examined as follows:

Since you were before the Commissioners before, have you been through South Wales, and are you prepared to give an answer respecting the facility of expediting the mail?—After I was here the former day I was commanded by Lord Lichfield to proceed to South Wales, and

2 N

No. 19.

Examinations.

No. 19.
George Louis, Esq.
14th April 1836.

on to Hobbs' Point, to do the utmost which could be done for bringing up the correspondence from Bristol, including the South of England and the Portsmouth line, and also including that from the towns intermediate London and Bristol, so as to reach Carmarthen, if possible, as early as the mail *viâ* Gloucester now reaches it. I cannot speak positively, but I do not despair of bringing up that correspondence to Carmarthen by half-past eight, or from half-past eight to nine, when there is a fair passage over the Severn, which sometimes a little exceeds the half hour allowed; and when the road gets finished to Hobbs' Point I think the packets might start from Hobbs' Point at twelve at night, and get to Waterford at ten or eleven next morning, assuming the average passage to be ten hours: then we leave undisturbed all the present relations, and do no mischief to any place.

Would there not still be a necessity for a delay of two hours at Carmarthen?—No, I hope not much more than is necessary for refreshment at Carmarthen for the Gloucester mail passengers; we do not propose staying above five minutes with the mail from Bristol, merely to transfer the passengers; we shall have no sorting at the Post-office, but go with all speed to Hobbs' Point. If Hobbs' Point be the point we are to go to, we could not get to Milford till one or two o'clock, for the road is very bad and it is considerably farther round.

If such an arrangement as that you allude to could be effected, do you anticipate a great increase in the correspondence by way of Milford to the South of Ireland?—Considerable. All the correspondence to the South of Ireland would go by that route from London, &c.

What saving of time would there be by this arrangement?—Four or five hours to Waterford. This is an extreme statement; we might fail in the contract, but I think not. Lord Lichfield desires every exertion to be made to accomplish it. There was one proposition when I left town that I should go *viâ* Marshfield to Bristol instead of through Bath. It is represented in Cary's Itinerary, and by general report, to be five or six miles nearer to Bristol than by Bath. I went over the Marshfield road and found it not a bad bottomed road, but very hilly. There is one fearful hill, Togg Hill. I ordered the road to be measured by a regular surveyor, and it turns out to be only three miles and a furlong nearer than by Bath, if the admeasurement be correct. We have now ordered Carey to measure the whole way to Bristol, for it may affect the Revenue in respect to the rate of postage from London to Bristol. There are many improvements made out of the town of Bath to cut off an angle, and I consider the difference of distance between the Bath and Marshfield route would be reduced to two miles in point of time, for we must allow, for going over Togg Hill, the period it would occupy to travel a mile. Roads are continually made to go round to save hills. By adopting the Marshfield route we should be leaving Bath which would be an injury to the contractors, and they have promised they will make up the difference, in point of time, of two miles between London and Bristol, so that instead of getting to Bristol at twenty minutes before nine we should be there at twenty minutes before eight, and instead of waiting at Bristol, as now, for sorting and for what we term the short letters for villages between Bristol and the next post town, we might leave Bristol without waiting to sort the London bag, and get off from thence in twenty minutes, taking the cross-road correspondence. We have to bring up the Portsmouth mail. I have had meetings of some of the contractors, and they are under a sort of promise to accelerate that mail, it being important that point should be attained.

You think that can be done?—Yes; it is a question of expense. We may, perhaps, have to give them money, but I hope we may do it without. If we retain Bath in the route from London I think we shall not have to give the contractor much money, but if Bath be left out it will cost much more than at present.

Does the principal part of the correspondence to the South of Ireland from Bristol go by Holyhead now?—No; the Cork and Cove and Enniscorthy I used to send in the morning by Dunmore, and in the evening by Holyhead, thus saving a little time for some places, but all the correspondence of the West of England is considered to go by Dunmore.

Has that long been the case?—Yes; for many years I had the control of that part of England: it will be necessary to state regarding the return of the mail to Bristol that we need not leave Hobbs' Point till about two o'clock in the morning; we now leave Milford at twenty minutes past ten o'clock at night. This later departure will give greater space for the packets and for the arrangement of the mails in Ireland. If we were to get over to Waterford at eleven, we could then get on to Cork that evening.

Do you know at what time the Cork mail from Dublin comes in?—There are two mails from Dublin to Cork; one leaves Dublin at one in the day, which carries the English correspondence, and gets into Cork at nine the next morning; the other leaves Dublin at seven at night and gets in at half-past one the next day.

So that in fact you would save the night?—The mail from Waterford might get there at night, but not very early; it would be late; I should fear all this, depending on the arrival at Dunmore, but great exertion must be made on that side as well as on this. If the arrangement be as proposed we should leave all the present relations undisturbed, but if we quit Carmarthen without waiting for the Bristol line there will be mischief done; correspondence will be left behind. On the Holyhead line the correspondence dovetails so well at Birmingham, there were none of those difficulties regarding accelerating the mails to that place. I should wish to say a word regarding the estuary bridges. Since Mr. Telford's report on the Severn passages these bridges have been invented by Mr. Rendell, of Plymouth; our mails pass over these bridges at three places. They are called floating steam-bridges; they are not expensive. The mail-coach to Dartmouth goes in such an one. If such a bridge as that could be established across the Severn it would make the passage sure. It might be used again at Bretton Ferry. There is a proposition to cut off six miles at Bretton Ferry; the distance then would not be so much greater by Bristol as is imagined, for Gloucester is as much out of the direct line to Carmarthen to the north as Bristol is to the south; but the river in the

Bristol route is an interruption. There is one of the bridges in question at Saltash, one at Devonport, and one as I have said across the Dart.

Have you in your report to Lord Lichfield suggested those improvements which you conceive may be effected by adopting a better mode of crossing the ferries?—I have simply mentioned them to Lord Lichfield, for I believe it has never been the province of the Post-office to act in these matters, but to avail themselves of any improvements which are made, or pay tolls for the bridges I have named. I should conceive it rather a subject in which the Commissioners should make inquiry.

Are you not of opinion that if those bridges possessed the advantages which you have conceived over the ordinary modes of crossing the ferry they will be adopted on private speculation, and that it will be open to the Post-office to avail themselves of them?—They certainly are a great improvement on the other modes adopted for crossing estuaries or wide rivers, and they make the passage pretty sure in the cases I have known. That over the Dart was the first I have known; that was not so sure, but great improvements have been made since.

But it has never been the practice of the Post-office themselves to establish ferries for the transmission of mails?—No; it should be remarked that the ferry at the Severn is private property.

What is the state of the road in South Wales?—It is very indifferent on the Swansea line, and I have written to the Commissioners and Clerks of the trust on the subject, and told them the mail would be given up unless something is done.

No. 20.

21st March 1836.

Lord Viscount Lowther was examined as follows :

Your Lordship has directed your attention a good deal to the subject of the propriety of transmitting Prices current through the Post-office at a cheaper rate than is now the case?—Last year my attention was directed to that subject from the applications of several merchants of the City of London, when I acted as a Commissioner to inquire into the Post-office, and my colleagues and myself instituted an inquiry into it. I was impressed with the necessity of, or, rather, the advantage to commercial men and to the country generally, from the increase of trade, and from the facility it would give to retail dealers in laying in their stores if such a measure could be carried into effect. The subject was new to me when I commenced the inquiry, but upon the investigation I was impressed with the conviction that it would be highly beneficial to the trade of the country generally; and subsequent consideration has confirmed me in that view, as I have since been upon the Continent, and I find that the government of France encourage the circulation of Price currents at a low charge, I think it is at the low charge of one penny, divided into a halfpenny charged for the stamp, and a halfpenny for the postage, which makes one penny altogether; these are allowed to be circulated in France, [*handing in a paper* ;] it is merely a commercial announcement, and it shows the difference of charge on Prices current coming here from the Continent to that on the same thing coming from one part of the Continent to another. From Paris to Calais it is charged only one penny, and from Calais to London it would 2s. 4d.

Now, confining yourself in the first instance to the question of the transmission of Prices current in Great Britain and Ireland, will you have the goodness to state what scheme you conceive it would be advisable to adopt?—I believe I held a different opinion from my two colleagues, which I think I expressed in the Report I presented to the Treasury from myself, and, at that time, I should have thought that the Revenue would have gained, as well as that it would be a great convenience and benefit to the trade if a stamp duty had been fixed at one penny, but circumstances have altered since, and newspaper stamps are proposed to be reduced to a penny. I stated in my Report that I would only propose a penny on Prices current in the first instance. But I thought afterwards it was capable of still further reduction; I think it would certainly be necessary for the protection of the Revenue to limit Prices current to a certain weight, and I regret that the double sheet frequently used for newspapers was not foreseen when the Stamp Act was made.

That is with regard to newspapers only?—Yes, with regard to newspapers.

Will you have the goodness to state what weight you think it would be expedient to fix?—I think for the actual purposes of trade I should propose one halfpenny stamp, the paper not to exceed half an ounce; if it exceeded half an ounce then a penny, and if it exceeded an ounce and a half then three-halfpence, and so I would go upon a graduated scale. This is the practice at the Post-office in France.

Now with reference to the question of the transmission of Prices current between this country and foreign countries, will you state to the Commission any suggestions that have occurred to you on that subject?—I think it should be as low as would defray the expense of its transmission; I think not more than a penny for a long postage, such as to Rotterdam or Hamburg; I think that both here and in the continental market there is an appetite for Prices current; for instance, the prices of wine at Bordeaux are very desirable at this market; a considerable number of those lists would be sent from Bordeaux to this country if they could be sent at a small postage.

In point of fact, at present, does an English Price current pay no more in going through France for postage than a Price current printed in France?—I am not aware whether it does or not; I never saw an English Price current in France. I saw the French Prices current in various places in my visit all through the south of France. Upon the subject of foreign

No. 20.

Lord Visc. Lowther.
21st March 1836.

Prices current last year I had the greatest number of complaints as to Prices current coming from Canton in China for the tea-merchants here; I think that is one [*handing in a paper,*] it is charged 1s. 7d., coming as a ship-letter from Canton. There is another sent as a newspaper, [*producing another paper,*] that is charged 4s. 9d. I believe the Postmaster-General diminished the rate of postage afterwards upon several complaints being made.

Would you suggest that the Prices current should be put on a different footing from ship-letters, or would you reduce ship-letters equally with Prices current?—It is a different branch totally; it is of importance the greatest facility should be given for the transmission of information upon matters of trade where there is no private communication. There are five or six places in different parts of the world, great commercial cities, such as New York, and Petersburg, and Canton, where merchants and extensive retail dealers wish to be informed of the prices of the articles in those cities from whence the produce comes. I think it is very probable the transmission of Prices current would swell the amount of the delivery from the Post-office very much. The Post-office objected last year; at least, Mr. Johnson, when he was examined here, and Mr. Crutchett objected to it on account of the labour it would cast upon the office; but when I look at the quantity of letters and papers that go through the Post-office in Paris as compared with those through the Post-office in London, it is comparatively small. Mr. Piron told me there were 100,000 printed papers of different descriptions went out of Paris every day, and they worked seven days in the week; he has published a book upon Post-office regulations, which has confirmed the statement he made to me. There are between forty and fifty thousand letters, which makes the business of the French Post-office very great.

Would you let the Prices current go free of postage, having a stamp, or would you propose to make them pay a slight postage going out to the West Indies and other parts?—I would have them have a stamp and go free?

Those that go out you propose to let go with a stamp, and those that come in by paying a slight sum for postage?—Yes; the limitation I should recommend upon the transmission of Prices current would be to guard against their being made the vehicle for advertisements. Strict rules should be laid down that they should contain nothing but the names of the articles to be sold and their prices, and that the names and residences of the sellers should be strictly excluded. I only make this suggestion as the commencement of a new system, and which might be extended afterwards. I conceive that Prices current coming within the limits of half an ounce, they being constantly in the habit of printing the same heading with merely the alteration of price, might be sold for a penny, even with a halfpenny stamp.

During your residence in France did any other point connected with the service of the Post-office in that country come under your observation, which you think it would be advantageous for the Commission to be acquainted with?—Yes; and, in the first place, I would mention, on the subject of fees, that there is no fee or gratuity of any sort allowed in the service of the Post-office in France. I had an opportunity when I travelled through the interior of France from Calais to the Pyrenees along cross country roads; when I had occasion to correspond with the interior of France, I always found the greatest regularity in the delivery of the letters to and fro. In every village I saw a letter box which was for persons to put in letters, which (if it was at a distance from a town) were collected twice a-week, and even in the hamlets and villages of the marshes of La Vendée, and the little hamlets in the valleys of the Pyrenees, I found that all the letters were delivered in every hamlet or village twice a-week, with a charge, according to the distance from the post town, an additional charge of one or two sous which is carried to the public account; there is no officer of the Post-office who is interested in any farthing that is collected, it is all carried to the public account. I wish to compare the service in France with the service of the Post-office in England? Where fees exist for the early delivery and the late transmission of letters. All persons are upon an equality in France as regards the receipt and delivery of letters; because here, when there is a village distant from a town, the only access the inhabitants have to the benefits of the post is by the casual attendance of one of their neighbours at the market town, who may or may not bring the letters to the persons they are addressed to in that village. In France, notwithstanding this additional service, the revenue of the Post-office has annually been increased from the year 1821.

Are you not of opinion that the comparative increase of the Post-office revenue in France with that which has taken place in the Post-office revenue in England, is very much to be attributed to the fact of the great improvement in all private communications in England which permits the illicit carriage of letters in a manner which it is impossible for the Post-office to compete with or to prevent?—I think that persons in England are deterred very much from correspondence by the high rate of postage; it is pitched at a much higher price than it ought to be.

Allowing that much may be attributed to that circumstance, is it not true that the great facility of intercourse by coaches and the excellence of the roads in England does render it a far more difficult matter to protect the Post-office here than it is in France, where the roads are bad and the means of conveyance few?—I should think from the tendency of English people to correspond and to write, from the superior education of the middle and the lower classes, and the activity in trade and business throughout the country generally, as compared with France, that many more letters would be written and communications made than in France, if it were not for the almost prohibitory high charge in England. I think it has come within my observation that a great many people do not write letters, and particularly from abroad, on account of the very high prohibitory duty here.

In the course of your inquiries as a Post-office Commissioner, did you form any opinion of the merits of the present system of conducting that department under a Postmaster-General, or of the propriety of substituting any other form of management for it?—I was not long enough

in the office of Commissioner to have been able to consider that subject with my colleagues ; but my observation of the Post-office has led me to this conclusion,—I think the present system has proved that it is not at all adapted to the active circumstances of the times, and I should feel disposed to new-model and reconstruct the Post-office Department altogether. I think one sees, in the present state of the Post-office, that it remains just what it was ever since the improvement it underwent in 1797 and 1798 ; there has hardly been any alteration since in its details except what has actually been forced upon it by the public : its duties are becoming now so great, notwithstanding its inconvenient and almost prohibitory arrangements, and so general, and, from the present state of the world, and our constant communication with the East and with America, I should look to England as being, in a great degree, the Post-office of the world, if facilities were offered ; and, however capable or industrious one man might be, I should conceive he could hardly be qualified to look into the number of details that that office would embrace in all its ramifications. I should think the better way would be to have a Board as in France (there it is called a Council), with a head and two assistants, one to superintend the Home department of the Post-office, and the other the Foreign department, and Colonies ; and the head would have a general view over the arrangements of the whole office. The different subjects would be discussed and considered at the Board. I would confine the patronage of the department to the chief of the Board and to the Treasury, being of opinion, that it operates to the prejudice of a department, when the junior Commissioners have any share in the patronage.

Is it not desirable that, in case of a Board being constituted, one of the members of the Board should occasionally visit and be absent from town for the purpose of inspection?—I have not a very great idea of that. It is contrary to the law at present, but I think if one of the members were in Parliament, perhaps he would hear more there than he would see if he visited the country.

You think it would be desirable that some member of the Board should be in the House of Commons?—Yes.

Should that one be the head?—Any one of the three.

But the other commissioners should be permanent?—Yes ; it is contrary to the law that a Revenue Commissioner should be in Parliament, but this office is distinct from all others : it has been a principle laid down from the time of William III., that a member of a Revenue Board should not sit in the House of Commons, yet the Act as regards the Post-office only passed in the beginning of this century.

Have you directed your attention to the system of the steam-packet service belonging to the Post-office?—Upon entering into the Commission I looked upon the steam-packet establishment as a very important branch of the Inquiry. Some time previous to my being named a Commissioner, I had carefully read and considered the evidence and returns on that subject to be found in the Reports of the Commissioners of Revenue Inquiry. After I became a Commissioner, I commenced taking measures to possess myself of all the fresh information which could be obtained on the subject. The Commission examined Mr. Lawrence on the subject generally : his evidence is in your hands. That Commission had obtained several returns, and others were in course of preparation when it was dissolved.

Had you examined the subject sufficiently to form an opinion of the manner in which the accounts are kept at the steam-packet stations?—I went through the account books, which were well kept, in a book-keeper's sense ; but it appeared there was no proper check at the different stations upon the receipt and expenditure of stores.

Did you look particularly into the Holyhead station?—No : the one I looked into was the Dovor station.

Did you turn your attention at all to the point, as to whether it would be convenient to put the packet stations under any other than the present management?—My disposition was to lay the service open to contract, though I was aware that that was liable to some objections ; but whether the system was changed to that degree or not, it seemed to me quite clear that some change was imperiously necessary. Looking to the very great expense, both of the vessels and the establishments connected with them, and to the loose system of management relative to their stores and repairs which seemed to prevail, I could have no doubt that a great alteration was necessary. It was natural to suppose that the manager of a civil department in London, without the assistance of some naval man, was not likely to be a very efficient director of the affairs of a fleet such as the Post-office employs : and experience has verified that theory. Without expressing a decided opinion upon the question of transferring the packet duty to the Admiralty, I feel quite justified in stating that that service ought no longer to be left in its present condition.

Every Commission that has inquired into the affairs of the Post-office from 1787 to 1835, has observed and enlarged upon the abuses which have been found to prevail in the packet system. A variety of details upon the subject will be found in the Reports of the Commissioners of Revenue Inquiry.

I made a calculation, at the time I acted as a Commissioner, from the papers furnished by the Post-office, of the expense of the packets. I took one year, which was at that time the last, the year ending January 1835. This, I think, shows that, upon a comparison of the expense of performing the same work by contract, the difference in favour of the contract mode was near 100 per cent. This was a calculation upon the materials I then possessed. I cannot pretend to accuracy ; but it shows, I think, that the contract work is done much cheaper. If the service was done by contract, which has been frequently recommended, it would not include the large item for superannuation for the packet service. I have a memorandum of an offer made to do the work of the Post-office between Dovor and Calais and Ostend for nearly a half of what I consider the present cost, and I believe that at Liverpool, even more favourable terms might be made with contractors.

Examinations.
No. 20.
Lord Visc. Lowther.
21st March 1836.

In estimating the deterioration in value of the packets by wear and tear, I have taken the very lowest scale, namely, 5 per cent. If I was disposed to swell this account of this expense, I might put it down at 7½ per cent., and be nearer a fair mercantile estimate.

In the calculation of the miles travelled by the steam-boats, for the sake of uniformity, I take the distances marked from Mogg's map of the United Kingdom, with the tracts of the steam-boats upon it. I think I am near enough the mark to afford a just general idea upon the subject.

It is to be observed, that in the Post-office returns of expenses upon matters which have occasioned an outlay of capital at their commencement, no notice is taken of the interest upon that capital. It is evident, in this way, a clear view is not obtained of the real expense. It is evident we only see the current additions to the capital first laid out, whilst not only the interest of the capital, but the gradual diminution of it by wear and tear is lost sight of.

With regard to the greater punctuality of dispatch, and the determination to cross the water under difficult circumstances, which have been attributed to the Post-office packets, I think that might be fully secured by contract. In my own experience I have never known any unwillingness on the part of commanders of vessels to encounter apparent danger in going out to sea. The desire to postpone, and the remonstrances against setting out, are frequent enough with passengers, but not, in my opinion, with captains of vessels.

There are three ways in which the business of the Post-office may be effected, namely, by an establishment of vessels belonging to the Post-office, by contract with private individuals, and by the employment of vessels under the jurisdiction of the Admiralty. Of these three, it seems that, through want of management, or exclusive attention to quick conveyances of letters, without any consideration of economy, the Post-office establishment of packets, so far as can be judged, is the most expensive.

I wish, in conclusion, to guard myself against assuming the complete accuracy of my calculations; but I should have formed this principle, had I remained as a Commissioner, in the conviction of its general truth.

ACCOUNT referred to by Lord Lowther, shewing the comparative Expense of conveying the Mails by Contract and by Packets, the property of the Post-office, from Returns furnished by the Post-office Department.

CONTRACT.

3,092 miles per week performed by contract for £17,850 per annum, equal to 2s. 2½d. per mile.

6,436 miles per week performed by Post-office packets, at an annual expense of £68,671, equal to 4s. 1½d. per mile.

No. 21.

21st March 1836.

Wolverly Attwood, Esq., and a *Deputation of the General Steam Navigation Company*, were called in and examined as follows :

Examinations.
 No. 21.
W. Attwood, Esq.
 and a Deputation
 of the General
 Steam Navigation
 Company,
 21st March 1836.

You are connected with the General Steam Navigation Company are you not?—I am.

Is that the Company which carries the mail to Hamburg?—Between London and Hamburg, and London and Rotterdam.

Are your vessels built in Scotland?—Our vessels are almost exclusively river built vessels, with the exception, I think now, of perhaps two steam-boats that were purchased.

What power are the vessels you now use to go to Rotterdam and Hamburg?—The power stated in the contract is, that a vessel shall not be less than from 80 to 100-horse power to Rotterdam, and not less than 100-horse power to Hamburg; but the vessels, generally speaking, are beyond that power, they vary from 100 to 160-horse power on the Hamburg station, and from 80 to 140-horse power on the Rotterdam station.

Do you find that power sufficient for the duties of the Post-office?—We find it what we consider the best proportion of power, according to the size of the vessel.

You do not think there would be any advantage or service in increasing the power?—I do not in the present vessels.

Do you know anything of the way in which Prices current are transmitted abroad?—It is a subject upon which I have incidentally had the opportunity of collecting a good deal of information, and also of ascertaining what the opinions of merchants generally are upon the subject.

Will you state to the Commission any opinion you have formed upon that subject?—As far as my own opinion goes, which is formed from the result of information I have obtained, it is this, that it would be decidedly advantageous to have the opportunity of transmitting Prices current not in the shape of letters, but in some mode assimilating to the mode in which newspapers are now sent, and that may be done either by a low stamp or a low rate of postage.

When you state a low stamp, should you think a penny would be low enough?—I should apprehend it could be low enough for all practical purposes, that is to say, it would be low enough to counterbalance, and people would sooner pay a penny to send the Prices current in an open and legitimate manner, than send them in the underhand mode in which they now send them, because there are scarcely any Prices current that now pay the postage, or at least a very small proportion of those that are sent abroad go through the Post-office.

Do you think there would be gain to the Revenue by allowing them to be sent by the Post-office?—I should imagine there would be a very considerable gain, for this reason—I would state, as a positive fact, that a very small proportion of the Prices current which are sent abroad do go through the Post-office,—they are sent by private hands; and that being the case, it is rather a singular thing that if you were to ask the merchants generally, whether having foreign correspondents, they would wish to have this facility of sending these Prices current at one penny postage, they would generally say “No;” for this reason,—that all those who now send Prices current abroad have so extensive a connexion among the persons who are constantly going abroad, that they can prevail upon them to take them; they have, in point of fact, the means of securing the transmission of Prices current through private hands without paying any postage, and therefore they consider if you were to adopt a general measure for allowing Prices current to be sent at a low rate of postage, that you would only enable parties who have not so extensive a connexion as themselves to send Prices current on equally favourable terms with themselves, which at present they cannot do. I believe the most practical and perfect information respecting Prices current was given in the evidence of Mr. Van Dadelzen, a gentleman who was examined before the Commission upon a former occasion.

Are there any observations that you wish to address to the Commission upon the subject of the steam-packet service?—My object in attending here was this, that I understood certain statements had been made to the Commissioners on the subject of the performance of the mail service between London and Hamburg, and London and Rotterdam, which is performed by the General Steam Navigation Company; and knowing it was a point which would attract a certain portion of attention, I was anxious to make a statement upon that subject, and also to answer any inquiries which the Commissioners might put to me.

What statement are you desirous of making to the Commission upon that subject?—That the Commissioners have had certain details laid before them, and from information which I have received, I conclude that they have had complaints made as to the manner in which the mail service was performed; and I was desirous to have the opportunity of making my own statement upon the same subject, or rather of explaining to the Commissioners the circumstances under which the service has been performed, and the manner in which it has been performed, referring for the proof of that to the registers of the Post-office, which, I should imagine, would confirm what I shall state.

Will you make your statement?—There have been statements made to the Commissioners, and to the Post-office, that the mail service has not been performed in an efficient manner, and that it has been performed at a much greater cost than that which ought to have been paid for the duty. Now, in the first place, I am desirous to say that it has been performed efficiently; that the vessels which have been employed in the service are of the most effective class and character which could have been employed in the service, that is to say, that they are equal to any equal number of vessels which you will find at the present time in the port of London or in any port, and better adapted to the service; and unless you were to construct a set of vessels

Examinations.

No. 21.

W. Attwood, Esq.
and a Deputation
of the General
Steam Navigation
Company,
21st March 1836.

expressly for the Post-office service, I do not believe you could find any vessels better than those which are regularly employed in the mail service.

Are these vessels as large, and are the engines as powerful, as the engines in the vessels employed between Liverpool and Dublin for instance?—They are very fast vessels; I am not particularly acquainted with those vessels, but, as far as I have had any opportunity of ascertaining the character of the vessels generally of London and Liverpool, the vessels carrying cargoes, I should consider that our vessels would be found fully equal to them in speed and in effectiveness.

What horse power are your vessels?—The vessels usually employed on the Hamburg station are 160-horse power, 130, 120, and 100,—those have been the vessels which have been usually employed.

What is the tonnage?—The largest tonnage is 600; they vary from 600 down to 400, and there never has been any complaint addressed to the Company from the Post-office of the manner in which the service has been performed. We have had occasionally, and the Post-office has sometimes communicated to us letters which have been addressed to it, containing complaints; those complaints have been invariably answered in a manner which we considered satisfactory, because we have never had any communication from the Post-office to induce us to think it was not satisfactory also to them.

What is the average passage to Hamburg?—Between fifty and sixty hours.

And what to Rotterdam?—About twenty-four hours; from twenty-four to twenty-six hours.

Have you put any new vessels on that station lately?—Not within the last year; but, in the years 1834 and 1835, we put four new vessels on that station.

Do you mean newly built vessels?—Three newly built, and one purchased, which was also newly built; and we should undoubtedly have put more new vessels on the station, and should have built vessels more repeatedly for the Post-office service but for this circumstance, that our contract was a contract for twelve months only, subject to be terminated after that period; and therefore, if we had built any number of vessels fitted peculiarly for these stations, which are stations that require vessels to be built expressly for them, we should have been in an awkward position, if, at the end of twelve months, we had found our contract put an end to.

Now, do you consider the vessels that you employ are sufficiently good sea-boats for the stations on which they are used?—Unquestionably they are.

If, for instance, you had a contract for five or seven years, should you have kept the same vessels; or would you have had a superior class of vessels?—We should have put on at once, instead of four vessels in two years,—we should have supplied the station with entirely new vessels; because, in that case, it would have answered our purpose to do so.

Are you prepared to say that you consider your vessels as equal to those that trade between Edinburgh and London, or that trade between Glasgow and London?—Taking the trade between Edinburgh and London, unquestionably they are; those are all vessels which I know very well; and, taking our steam-boats, they are, generally speaking, as good as theirs. We are now building five new steam-vessels.

What is the proportion of power to tonnage which you consider to be the best?—That is a point upon which there is more difference of opinion than any point connected with steam navigation. I do not profess to speak practically upon it, but the result I have arrived at from information I have obtained is, that you cannot lay down any absolute rule, for you will find that you may take a steam-boat of one construction, and put one proportion of power into her; and take another steam-boat of a different construction, and put a much less proportion of power into her; and the steam-boat with the less proportion of power will be found to be better than the one with the larger proportion of power.

But, generally speaking, has it not been found by experience that it is necessary to increase the power in proportion to the tonnage, more than has been practised until quite lately in the building of steam-boats?—It has been increased, generally speaking, but not universally; and there is an instance of it in the river at the present moment, which is a steam-boat belonging to the St. George's Company; it has not been found an effective steam-boat, and she is now put into the builder's dock for the purpose of increasing her tonnage, that is to say, to alter her shape by making her longer.

What is the general proportion of horse power to the tonnage of your vessels?—It varies very much indeed. I cannot give the average proportion off hand, but in the largest steam-boat we have it is about three tons and a quarter to a horse power.

Is not that a lower proportion of power to tonnage than is now generally adopted in the steam trade?—Why the steam-boat in which it is adopted, namely, the Monarch, which is a steam-boat following the Perth and Dundee in speed,—her proportion of power to tonnage is four tons to one horse power; she, after the Dundee and Perth, is the fastest; and the steam-boat immediately after the Monarch is the one I am now speaking of, that is, the John Bull. She is above 800 tons, and she is only 200-horse power. The steam-boats which are employed regularly on the Hamburg station I consider to be as effective steam-boats as any others.

You carry merchandise do you not?—Yes.

Are your boats very much loaded?—It is very seldom that they carry their full cargoes; if you mean that they are overloaded, that is to say, to such an extent as to impede their speed, I believe not. There have been many complaints made to the Post-office on the subject by parties who are interested in having the mail packets precluded from carrying any merchandise.

Is there any restriction put upon your lading?—Yes, it is this: the mail master, who takes charge of the mail, may, if he pleases, order any goods which are intended to go by the ship

not to be taken by the ship; and he may even, if he pleases, seize any goods that are in the ship in order to be taken by her, and prevent our taking them: that is the restriction. Upon that point of the overloading of steam-boats, and steam-boats carrying goods, I wish to make a short statement to the Commissioners, which is this: we have now many complaints made upon the subject; now the fact is, that there always will be complaints made so long as the mail-packets carry goods, because there are parties who are concerned in the trade who are directly interested in the goods not being taken by the mail steam-packets. I do not mean, of course, the higher class of merchants, generally speaking, but there are many parties who have that interest.

Can you inform the Commissioners the way in which the stores are supplied and the accounts kept by the Steam Navigation Company?—The stores are always obtained upon an order issued from the office or from the factory of the Company, signed either by the cashier or the accountant. If the stores are issued from the office the order is signed by the engineer or one of the managing parties at the factory. When the goods arrive, they arrive always with a bill of parcels, made in a peculiar form; and a certificate of the delivery is always required to be signed by the party who receives them at the factory, and then the bill of parcels is sent up for examination to the office: that is the system on which the stores are ordered and received. As regards the delivery of stores, no stores are delivered out without an order from the party who requires them. If they are required for the service of the ship, an order comes from the ship, which is signed by either the mate or the captain, or some responsible person on board, and upon that order the goods are delivered.

If you were not allowed to take freight, would not the expense of conveying the mails be very greatly increased?—I should imagine very greatly so.

What is the sum paid, according to the terms of your present contract?—£17,000 a-year; that includes the conveyance of the mails twice in each week throughout the winter. When the present contract was tendered for, that was a new condition; before, they were to be carried only once a-week to Hamburg during the two or three worst winter months. And we applied to the Post-office, when this last contract was tendered for, to know whether, under the peculiar circumstances of adverse weather, we might not obtain a remission of the twice a-week duty; because that would have enabled us to reduce something in the terms. But we were told there was no possibility of making any alteration in the original terms proposed, and therefore we were obliged to consent to it. We should have no objection to tender for conveying the mails without merchandise.

How long has your contract lasted?—It began in the year 1832, and I think since that time there have been two tenders.

Have the terms varied?—Yes, they have a little: I think there was a reduction after the first year; I believe a reduction of £1,000 was made: that was a contract at so much a voyage, and not running twice during the winter season to Hamburg, so that the actual amount has varied from fourteen to the present amount.

There was an account in the newspapers, some weeks ago, of a steam-packet being detained at Rotterdam from having goods on board not entered in the ship's manifest; are you aware what were the facts of that case?—I remember a circumstance somewhat of the kind alluded to, but it was not for having goods not entered in the ship's manifest; but the goods are all sealed at Rotterdam, and when the ship comes down to Helvoetsluys the custom-house officer examines her to see if the seals are all perfect, and when she came down to Helvoetsluys it was found that one of the seals had been broken or knocked off, and it was understood to have been knocked off by a passenger in walking about the deck. There was no idea of making any alteration in the cargo. She was detained about twelve hours.

Was she not sent back?—No.

Is it not a fact that one of your boats was lost very lately?—Undoubtedly.

What were the circumstances under which that happened?—They were these: the steam-boat called the "Queen of the Netherlands" was going over to Rotterdam with a Dutch pilot on board, and when she came off Goree it was about eight o'clock in the evening; the pilot had the control over her. She had a fair wind, and was going at the rate of seven knots an hour, when he ran her on shore, and there she lay till about two o'clock in the morning, when the passengers and crew left her, and she was lost. It was simply the circumstance of the ship being run ashore by the pilot.

Have any other vessels been lost since you have had the contract?—We lost the "Superb." She was lost in the autumn of 1834, when there was one of the heaviest gales ever known. She was totally lost off the north coast of Holland.

Have you any other instances of loss?—No other. We have always considered, with regard to the effectiveness of the packet, and the way in which the mail service has been performed, that unless you were to build at once a set of vessels expressly for the mail service that it could not be performed more effectively than it is now, and that even then it could not be performed with so much regularity as it has been; because you could not have the command of so many ships as the Company have the command of, and as they have devoted to the mail service when the mail service required it. We sent in in our tender a list of fifteen ships, every one of which could be made available for the service when required.

Did any other Company tender at the same time?—Of that I have no knowledge. I know that we expected there would be, and we lowered our terms in consequence. I was asked a question as to a contract for five or seven years, whether upon such a contract we should have an additional number of ships. When we made our tender a few years ago we sent in a letter representing that, under the circumstances, we hardly liked to undertake it, and to build more ships for the service, unless with the expectation of a continuing contract; because, for the

reasons mentioned before, we should have all these ships thrown upon our hands without any possible means of employing them; and we were also under this disadvantage, that, by taking the contract from twelve months to twelve months only, if the winter should be severe, we should, from the circumstance of the navigation to Rotterdam and the navigation of the Elbe being closed, be subjected to an immense loss throughout the winter; and being obliged to take the risk of that, we thought it was fairer to give rather more than twelve months for a contract, in order to give us a chance of having a better winter than the present one, if the present should be severe. But the footing on which it occurred to me, at the time we made the representation to the Post-office, it would be most desirable the mail should be carried, was that of making it a twelvemonths' contract; but on the understanding that it should be a running contract, subject to modifications, if there were any required. The footing on which we have been executing the work, and on which we are now acting, is this, that all the new vessels which we have built we have appropriated to the mail service; we have taken one by one all the smaller vessels from the mail station, and we have put on that station all the new vessels we have built or become possessed of, and that is the system on which we are now continuing, so that there will be two more new boats put upon that station this year; and, in point of fact, the whole of the boats will be new boats. The objection to a seven years' contract is this:—that, supposing you make a seven years' contract at once, and put on a certain set of new vessels, in the course of about three or four years those vessels are no longer the first class of vessels which they were when they were first put on, and by the end of the seven years you have a class of vessels which are third rate instead of first rate. Now, the most desirable mode of conducting such a business is this: you should be constantly improving the vessels; as, for example,—at the end of this year the vessels on that station will be new vessels, in another two years we consider that those vessels which then would be inferior out of these new vessels should be changed, and others more effective put on, so that you should constantly keep up a supply of new vessels. And by that system of action, the facilities we possess of doing that, by having opportunities of employing the vessels which we draw from the Post-office station on other stations, that we consider we have, and always shall have, a greater advantage in the conveyance of the mails, and be able to perform it more effectively for a series of years than any other parties can have without those advantages.

Do you find the passengers unwilling to go in bad weather, to leave Hamburg or elsewhere?—We find them very frequently unwilling to go from Hamburg.

After you have built a vessel, what do you consider to be the annual expense of keeping it up?—I think the usual calculation is about 15 per cent., but it depends on this, whether you mean the expense of keeping up the repairs as well as replacing her, that is, forming a fund for that purpose; or, do you mean the expense merely of keeping the ship in perfect repair?

Excluding the expense of replacing her, what do you calculate to be the expense of keeping her in repair annually?—I cannot give an exact statement upon that point, because it is a view which I have not taken upon that subject; and, therefore, I cannot give any calculation upon what the average expenses would be.

What do you consider to be the actual cost of working steam-ships of a size and power equal to those generally employed in the conveyance of the Holland and Hamburg vessels—say 120 to 140-horse power?—Upon a practical point of this nature, relating to a question in speaking of which we might be supposed to speak with some degree of bias, we prefer to lay before you information proceeding from, and recorded in, the evidence of other parties connected with steam navigation, as the result of their experience when examined upon a subject not at all connected with the present inquiry, and when there could be no possible object in overstating, but would rather be a disposition to underrate the cost of navigating ships of this description. Before the Committee upon Steam Navigation to India, much evidence was given as to the expenses of steam-vessels by parties possessing the requisite practical information to enable them to speak with confidence and as authorities on the subject; and who, being desirous to encourage the establishment of steam communication to India, would not certainly be inclined to estimate the expense at too extravagant a rate.

It is stated by Mr. Macgregor Laird, who is a gentleman of much intelligence, that, on reference to the actual accounts of a large Company at Liverpool for the last three years, he has ascertained that the average expense of the repairs upon fifteen vessels was £1,000 per ship; and, as several of these were new, this may be regarded as a low estimate. The expenses of wages, oil, and tallow, not including wear and tear, repairs, or coal, were £40 per week.

The expense of maintaining and renewing he takes at 15 per cent., and insurance at 5 per cent., which is low; the first cost of a steam-ship of 600 tons, complete for sea, built at Liverpool, he takes at £37 per ton; for a smaller ship the expense would be somewhat more.

The cost of a London built ship would be rather above £40 per ton for ships above 600 tons; below that, say something more.

Consequently, taking a ship of 500 tons, the cost say £20,000, the actual expense of working her from the port of London would be:

	£.
Wages, oil, and tallow, £40. 10s. per week	2,100
Coal, say 23s. per ton, 60 tons per week	3,580
Lights, harbour dues, and other dues at home and abroad, £30 per week	1,560
15 per cent. as maintaining rate	3,000
Repairs	1,000
	£11,240

In this account, nothing it will be seen is allowed for interest of capital.

With respect to the cost of coal, this, of course, is stated at the London price, and at the rate which it actually costs in foreign ports to the ships employed in trading to them. The General Steam Navigation Company export coals for their own ships, and are compelled to have very large stocks lying abroad for their winter's consumption. At Hamburg, Cuxhaven, and Heligoland, at each of which places a supply must be provided, the stock of coals at the commencement of the last winter was to the extent of more than £3,000.

As to the general expenses Mr. Laird's statement is followed, and our experience would lead us to consider them moderate, particularly as regards the allowance for repairing and maintaining. We have statements founded upon the actual workings of other steam-packets in the country, and these agree very closely with Mr. Laird's.

The dues and expenses in foreign ports are very heavy as compared with English ports. Representations, we understand, have been made as to the largeness of the sum paid for the conveyance of the Hamburg and Rotterdam mails. We are satisfied that if a calculation of the number of steam-boats required for the service were made, and if, from any quarters competent to afford accurate information, the expense of working those vessels were ascertained, it would be found that the whole sums received for passengers, goods, and from the conveyance of the mails, are not adequate to meet those expenses, without making any allowance for expense of management and interest of capital. We speak with confidence now, having actually considered and investigated the subject with reference to this particular view of it. Our inducement to undertake the conveyance of the mails at the rates we have done has been to prevent, if we could, the interference of an opposition in trades which were originally established by us, and made at a considerable expense, and with a large outlay of capital. From the extent of our operations and establishment, and the rigid economy practised in every department, we consider we are enabled to work, perhaps, lower than any other parties. Our engineering repairs are entirely done by our own workmen, the Company having a factory in which a considerable capital is invested, and above 100 men are constantly employed; and from our being our own insurers, and taking the risk ourselves of loss by fire or sea, we can certainly afford to perform our work at as moderate a rate as any person can possibly do; and had we not been in this practice we must have lost considerably by the Post-office contract. As it is, we certainly consider the sum paid to be very inadequate to the duty performed, accompanied as it is with a very great degree of risk, and requiring certainly on an average not less than eight vessels, and occasionally considerably more.

A question was asked as to the time in which the Rotterdam and Hamburg passages are generally performed by the ships employed in the conveyance of the mails. The fact is, that these passages never can be performed on the average in so short a time as the passages to ports the approach to which is not attended with so many difficulties as those to the ports of Hamburg and Rotterdam are. The entrances to the Elbe and Rotterdam river are very intricate, and ships can only go in at certain times of tide, nor can they venture to attempt the entrance in the dark; consequently, the Hamburg and Rotterdam ships are frequently obliged to lay off the port five or six hours during the night, that they may be prepared to go in with the first tide in the morning. If the Hamburg ship, which now leaves London at one, two, three, or four o'clock in the morning, were to leave at ten or twelve, she would in all cases of fair weather arrive at Hamburg as early as she now does, that is, on the morning of the third day, as during the second night she is, as has been stated, frequently obliged to be off the port. The advantage, however, of this system to the Post-office is, that in case of bad weather the ships have some hours to spare, and can still generally arrive in time to go in with the first tide in the morning of the third day. To us it is a disadvantage, inasmuch as the ships very frequently have to burn unnecessarily six or seven hours' supply of coal while lying still, and the effect is to make the average passages appear longer than they otherwise would. The same statement applies to Rotterdam, except that the Rotterdam steamer goes in on the morning of the second day instead of the morning of the third.

In answer to questions asked on a former examination, we stated our conviction that the vessels employed in the conveyance of the Holland and Hamburg mails were as efficient as any equal number of trading vessels which could have been brought by any parties into the service, and that the duty has been properly and effectively performed. We take this opportunity of repeating this expression of our conviction, and we are satisfied that the more inquiry is made into the subject the more firmly this will be established. On various occasions complaints have been made to the Post-office, proceeding from, or instigated by, parties interested in procuring, if possible, a change in the present system. Explanations have always been required from us in the most positive manner by the Post-office whenever any such complaints have been made, and we have the strongest reason to conclude that the answers given have been perfectly satisfactory; inasmuch as no remonstrance has ever been addressed to us, nor has it ever been found necessary to address to us any remark upon the character of the ships employed, or to express even a wish that any change in our arrangements might be made. We have exerted ourselves to perform the duty in the most efficient manner, and to the satisfaction of the Post-office, and from our never having had any intimation to the contrary we presume that we have been successful in these endeavours to conduct the conveyance of the mails in such a manner as they would consider proper and adequate. The Commissioners have before them testimonials which have been given by Mr. Canning, His Majesty's Consul-general at Hamburg, and the most eminent merchants of Hamburg, of the *admirable manner* (to use their expression) in which the conveyance of the mails at all seasons has been effected. There will at all times, and under whatever arrangements may be made, be found parties interested in making charges and complaints, and others disposed to do so; but hitherto the Post-office have, on inquiry, found the complaints made against us

without foundation. In fact, the powers vested in the authorities of the Post-office by the contract with us are of so extremely extensive and arbitrary a nature, that we have been, and are, entirely under their control, and must have made any alterations in our ships and arrangements which they had desired, had there been any occasion to require such alterations; and, having their own officers always on board the ships, in charge of the mails, they have always had the fullest means of obtaining information. It was stated by Mr. Williams, of Dublin, on a former Commission of Post-office Inquiry, that he had a strong objection to undertake the conveyance of the mails between Liverpool and Dublin on account of the feeling that would be excited against his Company, and the cry of *monopoly* that would be raised. We have had sufficient reason to know the justice of Mr. Williams's remark. To show the manner in which complaints are made we may state an instance which has recently occurred. We have been required by the Post-office to answer a serious complaint, couched in the strongest terms, of the irregular arrival of a mail from Rotterdam. On inquiry, it appears that the packet complained of actually arrived at her regular time, and that there was not the slightest foundation for the complaint. The parties who made the complaint are those who have been most conspicuous, and are the most interested, in endeavouring to excite a feeling against the Company.

Another question asked has been as to the proportion of power to tonnage which is considered the most effective in steam-ships. It should be explained, in the first place, that it is not the proportion of power to tonnage by which the speed of a steam-ship will be regulated, but the proportion of power to displacement and resistance; that is to say, one ship of 500 tons may not have more displacement and resistance from her construction than another ship of 400 tons, and would go equally fast with the same power; and by increasing the power in the ship of 500 tons you necessarily increase also the size and weight of her engines, and the weight of her coal and water; consequently, you increase very much both her displacement and resistance; and in many ships it would be a question whether the additional power would do more than overcome the additional displacement which it occasioned. According to the ordinary rule the square of resistance increases as the square of the velocity; that is to say, if to drive a given ship ten miles an hour you require 100-horse power, you would require 144-horse power to drive her twelve miles an hour. In this calculation, however, it is to be observed, that the ship and her displacement and resistance are supposed to remain the same, whereas, by the additional 44-horse power, you would sink her much deeper in the water, and instead of driving her twelve miles an hour would not obtain more than eleven, and it is questionable whether you would in very many ships obtain so much improvement. This is a question which has for a considerable time attracted a large share of our attention, with a view to ascertain the most desirable proportion of power to apply to our steam-ships, and we find that it depends very much on the particular character of each ship, and no invariable rule can be adopted. The opinions of the practical authorities differ very much. Sir Pulteney Malcolm, in his evidence before the India Steam Committee, states, that he considers 100-horse power to 450 tons a very good proportion, founding his opinion on this—that while Admiral on the Malta station he found, from the steam-packets which came out with the mails, that those with this proportion of power made upon the average better passages than those with a larger proportion. Mr. Morgan gives a similar opinion. We have ourselves found that the speed and effectiveness of steam-packets can by no means be estimated by the proportion of their power to their tonnage; nor do we entertain the opinion that there is any economy in the application of an extraordinarily large power to steam-packets. Indeed the calculation which we have already referred to proves this. Say that you drive a ship, having a given displacement and resistance, ten miles an hour with 100-horse power, and giving her 144-horse power without increasing the displacement and resistance, you drive her twelve miles per hour. The increase in speed is only one-fifth the increase in power, and in consumption of coal nearly one-half. And when it is considered that from the additional displacement and resistance consequent on applying the 44-horse power you diminish the speed from twelve miles per hour to eleven miles per hour, and thus gain only one-tenth in speed, while you increase the consumption of fuel one-half, it appears impossible that there should be upon the average of passages any economy in the application of the larger power. This is particularly the case when, as with us, coal is very expensive, and forms so large a proportion of the expenditure. The ships which have hitherto been found to possess the greatest speed are those with great buoyancy in proportion to their size, built very slightly, and which, from having in them a less proportion of timber, could carry the weight of larger engines than ships built with the strength of timber which sea-going steam-ships ought to have to render them permanently desirable and secure. The ships for the river trade are built in this manner, and possess great speed. If these ships were built with the ordinary quantity of timber which London ship-builders consider it necessary to put in sea-going steamers (the proportions of which were given by Mr. Fearnall, one of the most experienced and successful builders of steam-ships, in evidence before a Committee of the House of Commons in 1831), they could not actually carry engines of the size which have been put in some ships. The effect of building with a less quantity of timber is to give buoyancy and speed, but after the lapse of a few years sea-going ships so constructed cannot maintain the same character which if otherwise built they would do. Upon this point we speak without prejudice, for, of course, all we have to consider is the building of our ships in the most effectual manner. At present we are rather increasing the proportion of power in our ships, and the five which are now building, and will be ready in about three months, have as large engines in proportion to their size as they can properly carry, being of the best construction as regards form, and strongly built. In some of our present ships we have increased, and are about increasing generally, the proportion of power; but in doing this we are obliged to be cautious, and to take care

that we do not increase the displacement in an equal proportion to the additional power. If a ship is properly constructed in form, and with sufficiently strong timbers, she ought to work to the greatest advantage with, speaking roughly, one-horse power to three or three and a half, or even to four tons; much depends on the size of the steamer, as a smaller proportion of power is required for the larger sized ships. Mr. Field, who is one of the most experienced and best informed engineers, considers one to three a very good proportion. The Malta steam-packets, which are very effective ships, and have performed their voyages upon an average of nearly two years at the rate of seven miles and a half per hour, notwithstanding the quantity of coal they are obliged to carry on account of the length of the voyage, have on an average one-horse power to three tons and a half. We perceive from a statement of the performance of the Dublin packets before the India Steam Committee, that they averaged for twelve months seven miles and a half from Liverpool to Dublin. These vessels have a very large proportion of power, one to two and a quarter and two and a half. We perceive it is stated in that Report, that they carry no goods, nor, of course, any quantity of coals at all to be compared with that taken by the Malta steam-packets. We believe from Dublin to Liverpool the average performance is greater, the wind generally being more favourable; but the statement of their performance quoted is the only one given in the Report of the East India Steam Committee.

The "Monarch," which is one of the fastest ships now running, has 200-horse power to 850 tons. Of course, in speaking of the proportion of power, much depends on the efficiency of the engines. An effective engine of 100-horse power would do as much work as another of 120, or even 140-horse power. Bolton and Watt's engines work very much above their nominal power. We consider those in our ships equal to any that are made, and being under the management of our own engineers every possible attention is given to keeping them in the most effective order and condition, and they are maintained in a most perfect and efficient state. Whenever we have purchased ships from other parties we have almost immediately laid out considerable sums on the engines, and have always succeeded by care in making them work more efficiently than they had before done.

A ship which is to carry engines of the proportion of one-horse power to two or two and a half, must either be built more slightly than a sea-going steam-ship ought to be, or she must, if her timbers are of a proper strength, be made of a form which is not the best adapted to speed and efficiency. If a ship is made very full bodied she may then carry very large engines, although built of a proper strength; but then her form is not calculated for speed, and her engines cannot drive her so fast as smaller engines would drive a ship of the same size, but of a proper construction. Of course, the most desirable plan is, to build a ship of the most perfect construction as regards form, with her timbers of a sufficient strength, and then to put in her engines as large as she can properly take without being sunk too low in the water. This is the principle on which we have acted, considering that it would be a great mistake to diminish the strength of a ship or spoil her shape, in order to put large engines in her.

If the conveyance of the French and Belgian mails were thrown open to competition, would the General Steam Navigation Company be disposed to tender for the performance of this duty?—In all probability they would; we should consider, certainly; but we may be allowed to say, that we should not be at all disposed to undertake the duty upon so low a scale of remuneration as that for which we perform the Holland and Hamburg mail service. We do not, of course, speak as to the amount paid for that service as being any guide as to the amount to be paid for the French and Belgian service, because they are entirely distinct and different; but that unless a more profitable contract could be obtained, we should be sorry to undertake it. Our inducement to tender for and take the Rotterdam and Hamburg contract for a sum which we considered, and which has proved, inadequate, was to prevent any interference with the stations; but with regard to the mails from Dover to France and Belgium, the case would be different. If we undertake it, of course we should perform it efficiently, and, as we have done hitherto with our present contract, prevent any disappointment from the occasional detention of the packets by bad weather by providing extra ships.

Should you have any objection to purchase the present Dover packets in the event of your contracting for these mails?—We should not object to do so upon a fair arrangement.

No. 22.

25th March 1836.

Sir John Rennie was called in, and further examined as follows:

Have you seen Portpatrick since the gale of wind of the 27th or 28th of January?—I have not seen the harbour myself, but I have received detailed plans and sections of that portion of the harbour which was supposed to be injured by the gale, or stated to be injured; I have also subsequently seen Mr. Luin, who is the resident engineer under me; I have also seen the Report which the Commissioners sent lately to the Treasury, containing an estimate of the expense of the damage occasioned by the storm above mentioned; and I am clearly of opinion, that the sum stated in that Report, namely, £353. 3s. 8d., is an ample sum for the damage done; and I am further of opinion, that the damage never would have occurred, had the harbour been finished, which it was not when the gale occurred. Subsequently to that gale another very severe gale has taken place, which I think was on the 17th or the 18th instant, and I have had a report from Mr. Luin, the resident engineer, and I also saw him last Monday, and he stated to me, both in his letter and personally, that no further damage has

Sir John Rennie. 25th March 1836.

Examinations.

No. 22.
Sir John Rennie,
25th March 1836.

occurred, and that they are now going on repairing that which happened before; and he is firmly convinced that the former estimate which he made, namely £353. 3s. 8d., is an ample sum to make it better than it was before.

The damage was chiefly done to the south piers, was it not?—That is to the rubble glacis, at the back of the south pier head.

Had the pier ever before been damaged in a similar way?—It very frequently happens in making piers of that kind that damage occurs; the rubble is frequently displaced, and, indeed, it is almost impossible to form a rubble glacis in a pier of that description without storms or similar effective agents; because as the stone is loosely thrown together the storms consolidate it much better than it could be done by manual labour.

Do you apprehend that the harbour of Portpatrick will be liable to fill up, independently of the effect of storms upon it?—No, I do not.

And you do not think that any annual expenses will be necessary for dredging, or in any other way keeping the harbour clear?—All artificial harbours are more or less subject to a certain degree of annual expense in this way, but I believe that the harbour of Portpatrick will be subject to as little expense as any artificial harbour in the country.

Can you state to the Commissioners what you suppose the annual expense is likely to be?—That is a point to which I have not at the present moment turned my attention.

Without expecting much accuracy about a point to which you have not turned your attention particularly, can you state at all what the expense is likely to be in keeping up the harbour of Portpatrick?—I cannot, at the present moment, but I will make the calculation and let the Commissioners know.

You are of opinion there is nothing in the peculiar situation and circumstances of Portpatrick which renders it peculiarly liable to fill up?—Certainly not.

Does any actual expense take place annually for dredging?—At the present moment there is at a certain part of the harbour. But it must be observed, that that part of the harbour is now maintained at a greater depth than it ever was before the harbour was made; in consequence of the Government having determined to establish steam-boats several years before the harbour was fitted to receive them, it became necessary to make a sort of temporary provision by means of a basin on the north side of the harbour, which has been done, and the entrance to that basin has been maintained several feet deeper than it was previous to making the harbour at all; during the operation of the harbour a little siltage and sand has collected there, but that has nothing at all to do with the general principle of the harbour; because it is deeper now than it was.

In fact if the basin had not been made, it would not have been fitted for the steam-boats at all?—Certainly not so well at that period.

Are you quite satisfied that the harbour is deeper now than it ever was?—I am quite satisfied that that part of the basin is deeper than ever it was.

Is that from recent surveys?—Yes.

Who were those surveys made by?—By the engineers on the spot.

What is the depth of the entrance to the basin at low water?—From about three feet six inches to about four feet.

What depth of water is requisite for packets of the present size to enter, do you know?—I do not know what these packets draw, but I think it is six feet six inches.

Do you know at what state of the tide there is usually the requisite depth?—Soon after the first quarter of the flood.

When the harbour of Portpatrick is completed, will it admit larger packets than those which are now in use?—The packets of the present day appear to me not sufficiently powerful to carry on the duty at all times, and I am clearly of opinion, that when the harbour is completed, packets of sufficient power may be maintained there in perfect safety ready to perform their voyage whenever it is prudent to go to sea.

What sized packets, do you think?—I should think packets of 50 or 60-horse power.

Upon what ground do you expect that larger packets will be able to use this station than those which are at present there when the works are completed?—The harbour will be more protected.

Will there be a greater depth of water?—There certainly will, because a part of the harbour which is not now available, in consequence of the works not being completed, will then become available.

Do you mean to say there will be deeper water in the entrance?—No; they will be able to avail themselves of the deeper water which is at the entrance, which now they cannot.

When you use in your answer the term entrance, do you mean by that the entrance to the basin or the entrance to the harbour?—I mean the entrance to the outer harbour. The entrance to the basin is now maintained at an artificial depth. My idea was, when the harbour is completed there would not be so great a tendency to fill up as there now is, in consequence of there being no refuse of rubble or rubbish from the work to be carried into it.

In case of employing a larger class of packets, would not the depth of the water in the entrance to the basin, and the depth of the water and the capacity of the basin, be very inadequate for the accommodation of packets of an increased size?—The difference between the larger packets and those at present used would be so trifling, as scarcely, I think, to be beyond a foot or fifteen inches in the draught of water.

How would it be for the use of them in the basin?—There would be very little difference upon it.

What is the length of the present packets?—I really cannot answer that question.

Are you aware that complaints have been made, that in consequence of a want of depth of water in the basin all the packets of the present size are liable to sustain considerable injury

in rough weather when they lie there?—I have heard various rumours, but, considering the unfinished state this harbour has been in, and considering the gales of wind which have been witnessed there, I think you will find very few cases in which harbours under similar circumstances have not suffered more. But you will observe, that when this harbour is finished, then the state of things will be most materially changed, that is, the moment the outer harbour is finished.

In what way is it that the circumstance of the outer harbour being finished will materially affect the state of the inner basin with regard to the depth and size?—With regard to the depth and size it certainly cannot make much difference, but, as I formerly stated, packets will be able to lie outside where now they can only lie inside; moreover, the swell which now enters into the inner basin, and which, as observed by Captain Evans, produces considerable inconvenience, would be done away with, and then less depth of water would be necessary.

Do you conceive that when the harbour is finished to the extent you would wish to finish it, that then vessels could at all times, and under any circumstances, lie in the outer harbour?—Under any circumstances?—that, perhaps, is rather an extensive question, because there are at times very severe gales; but I think there will be very few circumstances in which they could not; I might almost say, under any circumstances.

The reason why you were asked whether you think they could lie there in all weathers, was because it must be clear to you that in coming from the opposite coast, the complaint made against the harbour is, that if they meet a heavy gale they have great danger from not being able to get into the bay?—I think, under all circumstances, they might lie in the harbour in safety.

What is the nature of the coast in the neighbourhood of Portpatrick?—The coast is of the primary formation, composed of schistose, and grey marble rocks, which rise to a considerable height perpendicularly from the shore, having deep and clear water close to them; there are no moving sands near, and consequently there will not be that tendency to fill up here that there is elsewhere; and, therefore, I am of opinion that the expense of maintenance will be very trifling.

Is the bottom clear, or is there much shingle and sand?—The bottom is sandy, but it moves very little, or scarcely at all, and the water is generally clear about it.

Are you acquainted with the harbour of Cairn Ryan?—I cannot say I am. I have passed by it several times, but I am not acquainted with it.

You are not able to speak to its comparative merits as a packet station?—Certainly not.

Are you acquainted with Donaghadee?—I am.

If there were large packets on that station, could they go in with safety at Donaghadee?—I think they might when the harbour is finished. The harbour is not quite finished at present; they have not removed the old pier and adjoining old works.

But you think that there would be a sufficient depth of water for packets of a much larger size than those used at present?—There would be sufficient for packets quite large enough to carry on the duty of the station.

When you first visited Portpatrick professionally, were you sent to Portpatrick exclusively, or were you asked to visit other points upon the coast, with a view to select that which should appear to be the best Post-office station?—The instructions from the Treasury at that time to the late Mr. Rennie were to examine the whole coast between the Mull of Galway and Cornfall Point on the Scotch side, and the Lough of Belfast and Bun Isle on the Irish side.

Your instructions did not, therefore, induce you to visit Loch Ryan?—No.

What was the date of your first visit to Portpatrick?—My first visit was in 1815.

That was of course before the times of steam-packets?—Quite so. After the late Mr. Rennie had prepared the whole of the documents ordered by the Treasury they were submitted to the Trinity Board to decide upon the place; and they, after hearing a great variety of evidence on all sides, and having examined the plans and Reports of Captain M'Kerlie and the late Mr. Telford, finally decided upon Donaghadee and Portpatrick, as being the best places they could adopt for a station. Subsequently there was the evidence also of Captain Smithett, who was one of the ablest captains on this station; and his evidence was decidedly in favour of Donaghadee and Portpatrick.

This was taken in 1815, was it?—No; that of Captain Smithett was subsequent to that, and to the establishing of steam-packets on this station, one of which was commanded by Captain Smithett.

Do you consider that the question of choosing a packet station for steam-boats is an essentially different one from that which is essential to sailing packets?—In a degree, but it is very small; because there can be no doubt whatever that steam-packets will be affected by a gale of wind as well as sailing vessels.

What is the rate of speed you calculate a steam-boat to go?—It is well known that the ordinary speed, or what is called the ordinary speed, of mail-coach travelling, now, is generally reckoned as the maximum speed of steam-boats at sea. Now you can always command ten miles an hour on land, but with steam-packets, at times, you can hardly make two.

Were you directed by the Treasury to make any alteration in the harbour after the establishment of steam-packets?—Not in the least; nor do I think it requires any alteration at all.

Do you conceive that in case it were thought advisable to suspend the works that are now going on at Portpatrick, that such suspension would be dangerous to the safety of the harbour?—I think it would. I think it would be a very imprudent measure to leave the harbour in its present unfinished state; and I certainly would neither take upon myself the responsibility of so doing, nor would I pledge myself hereafter that the same sum of money

Examinations.

No. 22.
Sir John Rennie,
25th March 1836.

would be anything like sufficient to complete it. You would have to break up the whole establishment, and to get rid of all the different tools and apparatus now in use on the works; and there would be considerable extra expense incurred in replacing them.

What is the estimated sum that remains to be expended at Portpatrick?—I believe the sum of £22,000 or £23,000 is stated in my Report, which was given in two or three years ago; and more than half of that has been granted.

Do you still think it will be finished within that sum?—I think so, notwithstanding all this delay and doubt about it.

Has there been any delay?—I mean this kind of doubt, as to whether the works should go on or not,—that is by no means doing justice to the estimate. I believe that no two works have ever come nearer to the estimate than those two works of Donaghadee and Portpatrick have done.

No. 23.

William Bald,
25th March 1836.

No. 23.

25th March 1836.

Mr. *Wm. Bald* was called in, and examined as follows :

You are a civil engineer, are you not?—I am.

And you are at present employed by the Irish Board of Public Works to construct a road from Lough Larne to Ballycastle?—I am.

Are you well acquainted with Lough Larne and Donaghadee?—I am very well acquainted with Lough Larne, and have been frequently at Donaghadee.

Are you acquainted with Loch Ryan and Portpatrick?—I have been at Portpatrick, and I have also been at Loch Ryan; but it is several years ago.

What do you think of Portpatrick and Donaghadee as packet stations?—I think the present harbour constructed at Donaghadee is not a good harbour for a ship to run into in a gale of wind from the east and south-east. It is of small capacity within, and consequently there is a considerable run of sea.

What is your opinion of Lough Larne as a harbour?—Lough Larne is one of the best natural harbours that I know of on the whole north coast of Ireland; it is deep water, capable of admitting ships at all times of the tide, and in all weathers. I was applied to early last season, to construct a timber wharf within the harbour of Lough Larne: this wharf was to be of rather a cheap and temporary nature, for the purpose of accommodating a steamer that was to call regularly there, coming from Campbeltown in Scotland; and also for the reception of a steamer which now usually calls there on her way between Londonderry and Liverpool.

How long have you been acquainted with the harbours of Donaghadee and Portpatrick?—I have been acquainted with Donaghadee and Portpatrick since 1811.

Have you known many accidents happen during that period?—Since that period I have not resided at or near to those places; I have merely occasionally passed through them.

Do you know, of your knowledge, of any accidents that have happened there?—Of my own knowledge I do not; but I have heard, when at Donaghadee, purchasing some machinery for the execution of the Antrim coast-road, that there was considerable danger and difficulty in a ship running for the harbour of Donaghadee in east and south-easterly winds, and at that period I examined this harbour with considerable care and attention.

You were asked if you could state at what amount of expense Lough Larne could be fitted up as a packet station; is there any pier to which the packet could go?—There is nothing except the timber wharf, which was constructed last summer; but I beg to mention, that, at a considerable distance within the harbour, there are two small piers built, which are dry at low water.

Is there any place to which a packet could come at all times? could it come up to this timber wharf you have built?—Yes; at all times of the tide, and in all weathers; there is perfect facility for a steam-boat of any size to enter into the harbour at all times.

What depth of water is there close to this timber wharf?—A steamer of 500 tons can lie along side of it in perfect safety, and I think a ship of 1,200 tons might lie along side of it by its being a little further extended.

Could that now be used for a packet to come up there?—No doubt it could.

It is the property of the Steam Company, is it not?—The timber wharf which was constructed was done at the expense of the few individuals engaged in the trade and commerce of the town of Larne. I did myself speak to Colonel Burgoyne, at the commencement of the work, to know if he could aid or assist them by any small loan, or even make an advance; but, if I rightly remember, there was some difficulty to get any aid or assistance; they consequently made the timber wharf at their own expense, which now answers every purpose that can be desired in the shipment of goods on board of the steamer or steamers that call there.

Was that made at any great expense?—To the best of my recollection I think from about £300 to £400. It consists of rough pieces of country-grown timber driven down into the mud in a simple plain manner.

Have you ever considered the question of a change of the packet station from the present place to those of Loch Ryan and Lough Larne, with reference to the effect it would have upon accelerating or retarding the transmission of the principal part of the correspondence between Scotland and Ireland?—I have.

Will you state your opinion upon that?—I am of opinion that packets, I mean steamers, established in Loch Ryan on the Scotch side, and Lough Larne on the other, would afford at all times a ready transmission of mails from the one country to the other. The British mails,

when landed at the harbour of Larne, might be sent in two directions, the portion for the north and western parts of Ireland by Coleraine, Londonderry, Donegal, and on to Sligo, and they could have a quick and rapid transmission by means of the new road now in progress, and extending along the north coast of Antrim; while the other portion of the mails destined for Belfast, and the whole of the centre and south of Ireland, would find a ready transmission through Belfast. It would, in this point of view, be divided into two branches, one, as before mentioned, along the north coast, embracing the whole of the north, and a considerable portion of the west of Ireland; and the other through Belfast, extending to the whole of the central and southern districts of the kingdom.

Do you mean that the transmission of letters from Lough Larne would be more speedy than that which now takes place through Donaghadee?—I am of opinion that steam-boats could make their passage more rapidly and regularly into Loch Ryan and Lough Larne than into Portpatrick and Donaghadee.

How many miles is Lough Larne from Belfast?—It is about 23 English miles; and a road on a perfect level could be made between those places—indeed, the country, in point of level, is extremely suitable to the construction of a railway.

How many miles is Donaghadee from Belfast?—I presume, about 21½ miles.

The letters for the north of Ireland are sorted at Belfast, are they not?—I understand the whole of the mails go to Belfast from Donaghadee at present.

Do any of them go through Larne at present after they leave Belfast?—When they arrive in Belfast, I should imagine, they are sorted; and those destined for Larne take down the coast, while another division takes an inland direction by the towns of Antrim, Ballymena, &c.

Your observations apply principally to being able to get larger sized packets, do they not?—I certainly should think that larger sized packets would be desirable; although, on the other hand, I am of opinion that in no part of the North Channel is there a greater or more dangerous run of sea than between Portpatrick and Donaghadee. The fine, safe, and secure harbours of Lough Larne in Ireland and Loch Ryan in Scotland would enable steamers at all times to keep up a regular communication between the respective countries.

WM. BALD.

Examinations.

No. 23.
Mr. William Bald,
March 25, 1836.

No. 24.

14th April, 1836.

Heigham Rogers, Esq., was examined as follows:

What situation do you hold at the Admiralty Office, Somerset House?—Chief clerk in the store department.

Will you have the goodness to state to the Commissioners what is the nature of the check exercised on the part of the store department at Somerset House over the purchase, receipt, and issue of stores at the several dock-yards?—Stores are generally engaged for by contract, and received according to the conditions of the contract; and what are not provided for by contract are provided by the storekeeper on the spot, after being sanctioned by an order from Somerset House to make the purchase according to the proposal for so doing.

Is any officer at the dock-yard allowed to purchase stores without the previous sanction of the department at Somerset House?—Not a single article.

You mean not an article, however trifling?—However trifling.

Can any stores be received at any of the dock-yards without the sanction of the store department in London?—None whatever; there must be an authority for stores being sent into the yard, either under a special contract, or under a demand from the yard, or a proposal to purchase. If it is a proposal to purchase, then the terms on which the stores can be obtained on the spot are ascertained by an advertisement, or bills put up at the yard gates, inviting tenders to provide them; and according to the lowest tender the purchase is made, provided there is no objection to the party, or no difficulty anticipated in providing the stores; but generally the lowest tender is received.

The officers at the yards are not allowed to engage in any dealings with tradesmen, of any sort or kind?—Not in any way whatever, excepting under authority; and in any proposal to purchase stores, the name of the party is mentioned, and the terms on which he proposes to send them in; and at the same time, the proposition to make the purchase contains the price at which the last purchase of the same article was made, so as to admit of comparison.

Those documents are then returned to the yard?—They are lodged in Somerset House, and an order given to make the purchase according to the proposal, provided there is no objection, or we cannot provide the stores from any other source: we may, perhaps, be able to supply them from some other yard.

Have you always at your department in Somerset House the means of knowing exactly what is the quantity of stores in any of the dock-yards?—We know that from the periodical return at the end of the quarter; but owing to the multifarious receipts and issues going on at all times, we cannot know it till after the day up to which the account is balanced, and which account, containing all the receipts and all the issues, is then transmitted; but it generally requires two or three weeks to complete it.

What is the nature of the control you exercise over the store accounts at the dock-yards?—The store accounts, under the late arrangement made by the Admiralty, are examined at the respective dock-yards, in the superintendent's office.

Does no further examination take place at Somerset House?—Not any. Till within the last two or three years all the vouchers for the receipts and issues were sent up to Somerset House, and the ledger examined by those vouchers; and when the ledger was so examined,

No. 24.

Examinations.

No. 24.
H. Rogers, Esq.
April 14, 1836.

and the remains, and, consequently, the first charge for the ensuing period, ascertained, the accounts were returned to the yard, retaining in the office a copy of the remains of that account, so as to check the first charge of the ensuing account.

Does no occasional re-examination of any of these accounts take place at Somerset House?—Not now. The alteration was made at the beginning of the year 1834.

When stores are supplied to ships in commission, you examine all the accounts, and check them in London?—Those are all examined at Somerset House. When stores are wanted in the yards for carrying on works in the yards, and for supplies to ships, the accounts of supplies to ships undergo a complete examination in Somerset House, viz., the boatswain's accounts and the carpenter's accounts, but the gunner's accounts are examined at the Ordnance Office.

The several officers of the yards are held responsible for their accounts?—The stores are supplied to ships according to certain fixed establishments; no ship can get more than a certain fixed quantity of each article. As they are supplied from time to time, the vouchers for those supplies are sent up to Somerset House monthly, the officers of the ship being furnished with copies of those vouchers, that they may be enabled to regulate and make up their own accounts. At the end of the year the accounts are delivered in to the office, and strictly examined as to the receipts and issues; and one most important document as to the issues is the account of the stores expended on board ship, which requires, of course, much practical knowledge as to its proper examination, and for that purpose we have a professional officer attached to the department, who goes through such examination so as to determine whether the expenditure appears reasonable.

The receipt is vouched for by some person on board the ship?—The receipt on board is vouched by the supply-note sent up from the yard, but the expenditure is vouched by the Master's examination, and by the Captain's approval.

What is the nature of the professional experience of the officer to whom you allude as attached to the Store Department in London?—He is a Master in the navy, and can judge of the reasonableness of the expenditure, having been selected for the duty in consequence of his superior knowledge and experience in such matters; and if he has any doubt as to the propriety of allowing expenditure in regard to any extraordinary losses, he refers to the ship's log, to see whether there is any thing noted therein in justification of it.

In the case of expenditure upon the steam-vessels attached to the navy, what officer is there in London who examines into and answers for the reasonableness of the charges incurred with respect to those steam-vessels?—The Master in the navy above alluded to examines the account of stores expended in steam-vessels.

In the case of the repairs of boilers and of engines, do you consider a Master in the navy a competent judge of the reasonableness of the expense incurred under that head?—His knowledge is more particularly confined to the boatswain's and carpenter's stores. Anything relating to steam-engines is rather new to him; at the same time the stores expended undergo his examination the same as the others.

Are those accounts referred to anybody else besides him?—No, they are not; but there is nothing of any importance that can take place on board a steam vessel. All repairs are generally done when the vessel comes into port, and then they are done in the dock-yard, and not accounted for by the officer on board the ship.

With respect to the issue of tallow and other things required peculiarly for steam-vessels, who inquires into the reasonableness of accounts of that nature sent from on board ship?—The officer I spoke of.

Do you know whether he has ever served on board a steam-vessel?—I do not know that he has. This examination into the expenditure of oil, tallow, and other articles on board steam-vessels, I am well aware, has engaged his particular attention, so as to be enabled to make a comparison of the expenditure on board one vessel with that of another, and so that any excess may become a matter of inquiry on his part, in case it should appear necessary.

Are there periodical inspections of the state of the accounts and of the stores in the different yards, and the result, reported to the office in London?—There are not, excepting the Lords of the Admiralty visit the yards occasionally, and go through the store-houses. The accounts are not inspected, that I know of.

Does not the Storekeeper-General occasionally visit the yards for the purpose of inspection?—Not at regular fixed periods, but he has visited the yards on some particular and specific services by the directions of the Board.

In your experience, has any defalcation in stores taken place?—No, except six or seven years since, an embezzlement of copper was found to have taken place. It was not discovered in the dock-yard, but information was given from Birmingham that there was a large quantity of King's copper, known by the King's mark upon it, having been obtained from the neighbourhood of Chatham; and it was found on inquiry that an embezzlement had taken place.

That was not discovered, in the first instance, in the yard?—It was not, but through the information of a manufacturer at Birmingham.

Could that at present occur without its being known?—Just in the same manner, but not to the same extent. I am fully of opinion it was copper not taken from the storekeeper, but embezzled after it had been issued to the workmen employed in carrying on the works, by their taking every opportunity of putting copper in their pockets, such as copper nails, or secreting it in places where other persons might have an opportunity of getting possession of it. It is believed that all the embezzlement at Chatham took place in this way. It is, however, right to mention that, in addition to the regulations that previously existed for guarding against the embezzlement of copper articles, the strictest regulations that could be devised were issued to the several yards on that occasion.

Are the storekeepers in the different yards ever allowed to sell any of the stores on private account?—They are not; there are public sales, now and then, of stores if worn out or decayed, and not fit for the use of the public service; they are sold from time to time by public auction.

They are not allowed, on any consideration, to supply private individuals with public stores?—They are not.

In case of a ship coming in in distress, are they not, under those circumstances, allowed to supply?—Yes, the superintendent, on application being made to him, is authorized to grant assistance not only in supply of stores, but even in the use of a vessel.

Are those occasions strictly limited to ships in distress?—I believe so far as the superintendent has authority upon the spot; but if he supplies any article, through any particular circumstance, to any individual, he makes a report to the Admiralty for the purpose of its being allowed or disallowed.

Do you think that the Commissioner would think himself authorized to supply, habitually, a private tradesman with Government stores?—Certainly not, on no account whatever, unless under some very peculiar circumstances, such as a vessel being in distress, or perhaps a merchant upon the spot wanting a particular article of very great importance, which he could not procure in any other way; and any case of the kind would be reported immediately.

Is it the case in the Royal Navy that the captains of vessels are held responsible for any defalcation that takes place in the stores?—Yes, unless satisfactorily explained.

If any loss takes place, are they forced to account for it?—If, by accident, such as the blowing away of a sail, and so on, a proper explanation would be required; but if anything is deficient, and which cannot be accounted for, he is answerable for it, as well as in the case of any improvident or extravagant expenditure; for as the captain approves of the expenditure every month, he admits that it is, in his opinion, reasonable, and then, if, on examination afterwards, it is found unreasonable and extravagant, he is called upon to explain, and if he cannot explain, he is charged with the excess. In the same manner, the captain or commanding officer of a steam-ship approves of the expenditure; and, at this moment, we are making arrangements for placing the engineers' stores belonging to steam-vessels in charge of the engineer, and requiring accounts of their stores to be made up separately and delivered into office in the same manner as the accounts of boatswains' and carpenters' stores of ships in general.

Has not a department lately been established in the Admiralty for the purpose of attending especially to the steam service?—Mr. Ewart was appointed more particularly for that service about twelve months ago under, I believe, the title of engineer and inspector of steam machinery.

What do you understand to be his duties?—To attend to all matters relating to steam machinery. As he resides in Woolwich Yard, if the steam-vessels are built at other yards, they are brought round to Woolwich, and the steam-engines and machinery fixed on board them.

There is an establishment at Woolwich for that purpose?—I am not aware that there is any particular establishment under Mr. Ewart. The engines and boilers, &c., are prepared and sent in by the contractors, whose bills of charges are examined and approved by Mr. Ewart, and he joins in making demands for stores connected with the steam machinery before they are acted on; and when the articles are sent in, he examines them before they are received as fit for the service, and before the contractor can be paid. Engines are in hand at this moment by Messrs. Seeward, of Limehouse, for the "Volcano," building at Portsmouth, Government finding the copper for the boilers according to the arrangement made or approved by Mr. Ewart.

You conceive that the object of Mr. Ewart's appointment was in order that there should be some person thoroughly acquainted with the service of steam machinery, who might be the official adviser of the Admiralty, and responsible to them on everything connected with that machinery?—Yes.

No. 25.

Saturday, 16th April 1836.

The Right Honourable Sir *Henry Parnell*, Bart., M.P., was examined as follows:—

You have particularly turned your attention to the communication between this country and Ireland by Holyhead?—Yes; I have been for several years concerned in it as a Commissioner of the Holyhead road; and, as chairman of several Committees of the House of Commons, I have had occasion to enter into all the details on the subject.

Have you considered the subject of the expediency of retaining or discontinuing the morning packet?—Yes, I think it ought to be continued for the purpose of establishing a regular communication between London and Dublin every twelve hours, that is, by having a coach to leave London, carrying mail-bags every morning so as to arrive at Holyhead in time for those bags to be forwarded by the day packet; and that coach to return from Holyhead after the day packet arrives at Holyhead, so as to bring up to London the bags that packet brings over from Dublin.

Have you turned your attention to the expense the alteration you suggest would probably occasion?—Yes; my opinion is, that it should not be a regular mail-coach, but that an arrangement should be made with the proprietors of some post-coach, that they should have no advantage in regard to tolls; and, on the other side, should not be restricted with regard to carrying passengers. I believe, from the communications I have had with coach-proprietors,

that they would undertake to carry mail-bags on this plan for little or no remuneration in money, in consequence of the custom they would secure by being employed by Government. At present there is a day mail, from Dublin to Belfast, on this plan; the proprietor receives nothing. There are in summer three coaches from London, and two in winter, between London and Shrewsbury, which leave London in the morning, and arrive at Shrewsbury about ten or eleven o'clock in the evening. If they continued on to Holyhead at the same rate, they would arrive there at about ten o'clock the next morning, so that it would be only to change the hour of the departure of the packet from eight to ten, to have a regular day-mail communication. I have not the least doubt that an arrangement might be made with some of the proprietors on the Holyhead road, by Coventry and Shrewsbury, for carrying a guard and mail-bags at very little expense; such an expense as would be much more than compensated by the increased correspondence and postage duty which would take place. I proposed this plan in the evidence I gave before the Committee of the House of Commons in 1832; and I have since endeavoured to discover if any valid objections could be urged against it, but I never heard of any. I know from communications I have had with members of the Irish Government, at present and formerly, that it is considered that it would be a great advantage to the Government of Ireland. All letters and despatches that Government might find it necessary to write from London after the mail leaves the Post-office, and before six o'clock in the morning (the hour for despatching such a coach as that I have referred to), would get to Holyhead twelve hours sooner than at present. A communication every twelve hours must be an object of great advantage. With regard to public correspondence, it is evident that such an arrangement would be very useful. The whole of the letters from the interior of Ireland for England arrive now by the mails in Dublin, at six o'clock in the morning. If a coach left Holyhead, coming up through Shrewsbury and Birmingham, to London, after the day packet arrived at Holyhead, all those letters from the interior of Ireland would be carried forward, and spread throughout the whole of England, which would be of great importance; and again, all the letters collected together by the cross-mails on the Holyhead line might be forwarded by the day mail, and would of course arrive and be distributed in Dublin so much the sooner; and even when the letters brought by the day mail arrived in Dublin before the departure of the evening mails, they would all go on without stopping in Dublin, through the whole of the interior of Ireland. I think the advantage would not only be very great in a commercial and many other points of view, but also in regard to the Post-office revenue. Such a facility of extending correspondence must necessarily lead to an increased revenue, and in this way the day packet might be rendered exceedingly advantageous.

Is the day packet a matter of great convenience to passengers?—I consider it an exceedingly great convenience to the passengers, in the winter especially; the packets leaving Kingstown at seven o'clock in the evening, necessarily arrive on the Welch coast in the dead of the night; and in very bad weather, in heavy gales of wind, it cannot be very easy, or perfectly safe, to discover and enter the small port of Holyhead. The passengers in bad weather, in winter, would, many of them, sooner remain in Ireland several days together than cross the Channel; whereas, now such a thing is hardly ever heard of. The packet starting in the morning is almost certain of getting on the Welch coast before dark, so as to make sure of getting into port. I should imagine, from my communications on the subject with those who are in the habit of travelling between London and Dublin, that, if the day packet was not kept up, it would be exceedingly complained of. As to the expense to the public, if the fares were so regulated as (in my opinion) they ought to be, I am certain that the day packet might be turned into a source of very great profit. The number of passengers between Holyhead and Dublin has been kept very low in comparison to what they would have been, in consequence of the high fares; and though the fares have recently been lowered, they have not been lowered to the point they ought to be, to encourage the passing of the people of Dublin over to Wales, as a recreation and amusement. I should say in the summer months, from the 1st of May to the 1st of November, if the packet fare on the day packet was reduced to 5s., and the fares for horses and carriages reduced in the same proportion, and the fees to the stewards altogether abolished, there would be hundreds of persons crossing, in the place of the small number at present. The number would be increased so largely, that the Government would get the benefit every private owner of steam-vessels now does, by regulating his fares according to the best mode of fixing the fares for securing passengers.

Do you consider the accommodation on board the Holyhead packets as good?—The accommodation is something better now than it was formerly; nothing could be so bad; it was quite shameful at one time. I believe, in my former evidence, I explained what the state of it was, previous to my giving that evidence. There were no sheets provided; and a captain once told me, that the small quantity of bed-clothes, and want of change of beds, made it necessary for him to use great pains in getting them out in the air, to prevent their being quite unfit for use. Everything was totally neglected in that respect; there was nothing in the way of furniture.

How is it now?—It is something better; I do not exactly know whether those circumstances are altogether changed. The day-coach, I think, ought to leave London at six in the morning; and, by giving it an hour's more time to go over the ground than the present mail, it would arrive the following morning at Holyhead at ten o'clock, at which hour the packet might sail; the time now is eight: the packet should sail from Kingstown at eight in the morning instead of nine, as it now does, and the coach should leave Holyhead at four in the evening, so as to arrive in London the next evening at eight o'clock. I almost think it will be absolutely necessary to have a second coach to do the Post-office business, particularly when the duty on newspapers is lowered; for, at present, Ireland is mostly supplied with Irish news-

papers, in consequence of the stamp being, I believe, only twopence, and the price of the paper fourpence to the purchaser instead of sevenpence, as it is here. The proprietors of newspapers in Ireland are so well aware of the effect this reduction will have in leading the people of Ireland to take in English newspapers, that meetings have been held and deputations have been sent over to try to prevent the duty in Ireland being fixed at a penny a-paper. I never see the Holyhead mail on the road now but it is more loaded in appearance than any of those called heavy coaches. I think that must be provided for by a second night mail, or some substitute of the nature I have suggested.

Have you formed any opinion on the manner in which the Holyhead establishment has generally been managed by the Post-office department?—Yes, soon after the Post-office established steam-boats, a committee was appointed (in the year 1822) to inquire into the arrangements under which those packets were established at Holyhead, and in that committee, of which I was chairman, the whole subject was fully entered into: all the principal engineers, all the captains who had been concerned in the management of steam-vessels, and all the principal builders of steam-vessels were examined, and the general result of the inquiry was, that the plan adopted by the Post-office appeared a very imperfect one; the vessels were badly constructed; the engines were not sufficiently large; the whole arrangement for keeping them in repair and managing the business appeared to the committee to be exceedingly defective: the committee recommended various measures to be adopted,—more packets to be made use of, for the Post-office attempted to carry on the communication with two packets; they recommended four to be made use of, and recommended a stronger and better description of packets to be built, and of a better form, for quicker sailing; the first were very clumsy heavy vessels; they also recommended engines of larger power; two 50-horse engines instead of two 40, and not to increase the size of the vessels above 200 tons. According to the opinions of all the engineers and others, it appeared that that sized vessel with that power would probably make the most useful vessel for the purpose of despatch as well as safety; and they also particularly recommended that there should be a professional engineer employed at Holyhead to superintend the vessels, there being nobody of that character in the first instance, the business being left to the common engineers, who had the care of the engines in the vessels. None of those measures were adopted by the Post-office; the Treasury, at my request, called on the Post-office to give their reasons why they should not be adopted. I met Mr. George Freeling at the Treasury, and the matter was discussed; he advanced reasons to show they ought not to be adopted; the consequence was, the public were exposed to great inconvenience for several years under the old system, except in the establishment of an additional packet or two; but still the same defects of small engines and badly-constructed vessels continued. The proof that the decision of the Post-office in not adopting the measures of the committee was wrong, was, that they were ultimately driven by circumstances to adopt almost all of them; they increased the size of the engines nominally to two 50's, but, by the awkward manner in which they effected this, it did not produce anything like an additional 20-horse power. The Post-office did not put in new engines, but only increased the cylinders of the old ones. They also appointed a new engineer, of the name of Johnson, to superintend the whole of the packet establishment, he being originally the engineer sent down to take care of the engine on board a packet. Some new packets were put on the stations, in place of the two first that were built, which are the same packets, I believe, at present in use; but, from all the information I have ever obtained respecting these packets, they appear to have been badly built, and by no means sufficiently strong. This appears in the evidence before the Commissioners of Revenue Inquiry, so that, upon the whole, the public have, by the management of the Post-office, never had the advantage of proper steam-vessels on the Holyhead station, and the voyages must have been, upon an average, much longer than they ought to have been. Though no serious accidents have happened, the risks must have been considerable which have been run. I was told, by a captain, when in a bad packet in a gale of wind, that, in consequence of the engines not being of sufficient power, we were making no headway; whereas, with a proper vessel, that we should have gone four or five knots an-hour, and that we were making our passage only by getting a few knots a-head between the severity of the squalls. In other cases, from boilers being so very much worn, the captains were afraid to use the steam to its full power. I have understood that, on one occasion, the sailors refused to go to sea in consequence of the bad condition of the boiler. I stated in my evidence, when I was before examined, that I saw a boiler soon after it had been taken out of a packet, the bottom of which was so burnt, that there was a hole in it, and some of it was not so thick as a worn-out sixpence; in short, nothing could have been worse managed than the whole business has been. In consequence of the Inquiry made in 1832 the vessels have been strengthened—this is a proof that they were materially defective—the engines have been improved, and, on the whole, the packets have been in a better state, and the business has been tolerably well done, though all has not been effected, nor anything like it, which might and ought to have been done.

You think the Revenue would gain by lowering the fares?—I am quite certain of it; if the Post-office were away, and did not exclude the private companies from going to Holyhead, by the apprehension of their doing that which they did at Liverpool—namely, run down the fares to secure passengers—I am quite satisfied such companies would not have the fares above 10s., and I think it is probable it would be much lower; for there is nothing in the expense of managing the business to require a higher fare than is charged at other places.

Are there any fees paid now besides the fares?—3s. 6d. is given (2s. 6d. to the steward, and 1s. to the cabin-boy), which is the same which was given in the old sailing packets, when they had a great deal of trouble; but now, on a fine day, the passengers never see them. I think those fees ought to be done away, and it is odd why they should be continued in the Holyhead

packets when they have been put an end to in the Liverpool Post-office packets ; but it is a great drawback on that station, and the Revenue will suffer just in proportion as that fee is exacted. It has been the practice for the stewards to exact it in a manner as to make it almost impossible to resist paying it. I have heard of cases where they have interfered, and prevented gentlemen taking their luggage on shore ; and, in short, they have made gentlemen feel they had better pay it than squabble about it. In one of the Committees of the House of Commons I recommended that the Post-office packets should be allowed to carry parcels ; they had been before prohibited, and there was great difficulty in getting a coach parcel across the Channel. This plan was adopted by the Treasury, and has been of very great use. The present charges are the same as those originally introduced ; and, as I was concerned in regulating them, I am able to say they were proposed as an experiment, to see how they would work, and not as permanent charges. I always looked to their being reduced when it was found there was a considerable quantity of business doing. I am quite certain that if the charge for carrying parcels was considerably reduced, that business would extend greatly. I think half the present charge would be quite sufficient, which would be 6*d.* for small parcels, or $\frac{1}{2}$ *d.* a pound for heavy parcels. The fees charged at Holyhead and Dublin, shipping and landing the parcels, by the coach-proprietors and agents, are still a great deal too high, and ought to be reduced.

Can you give information respecting the means they have in Dublin of knowing the hours of departure of the Holyhead packets?—I do not know of any means. I do not think there is any office. There is an office advertised for gaining information respecting the Liverpool packets, but I never saw the Holyhead packet mentioned ; and I should say, at this moment, I do not know where information can be obtained : it was to be got formerly at the hotel in Dorset-street, from the owner of the coach which carried the passengers to the packets. There appears to me to have been a complete neglect of everything of that kind with regard to the Holyhead packets—something decidedly unfair ; because so much pains being taken in advertising and otherwise making known the departure of the Liverpool packets, must have an influence in leading passengers into that course of conveyance instead of the other.

No. 26.

To the Lords Commissioners of His Majesty's Treasury.

Board of Works, 16th Jan. 1836.

MY LORDS,—We beg to call the immediate attention of your Lordships to a special report which we have received from Captain Evans and Mr. Gardiner, on the subject of the establishment of the Post-office at Holyhead for the steam-packet service, which we transmit to you, together with the evidence on which it is founded.

We should not have done so until we were able to make a general report to your Lordships upon the system on which this branch of the business of the Post-office has been conducted, if it did not appear to us that the state of the establishment at Holyhead imperatively requires the immediate interference of your Lordships.

We have examined the evidence which accompanied the report of Captain Evans and Mr. Gardiner, and are satisfied that the charges of fraud and malversation brought against Mr. Roberts, the storekeeper, and Mr. Johnstone, the resident engineer, are fully made out; and we accordingly recommend that these officers be dismissed from the public service.

We also feel it to be our duty to say, that the agent, Mr. Goddard, appears to us to have neglected the duties of his office in the most culpable degree, and we are therefore of opinion that a more efficient and trustworthy person ought, without delay, to be substituted for him.

We believe that it would be most desirable that an agent for Holyhead should be immediately appointed to undertake the management of the dock-yard and the care of the stores, who has had practical experience of the manner in which these duties are performed in His Majesty's naval yards; and that great care should be taken to select proper persons to fill the subordinate situations of storekeeper and engineer which will become vacant.

We forbear to express our opinion upon any points but those which require your immediate attention, because we conceive that they will be more properly considered in the general report, which we hope shortly to be able to submit to your Lordships.

We have the honour to be,

Your most obedient servants,

(Signed)

DUNCANNON.
H. LABOUCHERE.
SEYMOUR.

Letter from Com. of Post-office Inq. with Report of Captain Evans and Mr. Gardiner.

No. 27.

To the Commissioners of Post-office Inquiry.

Holyhead, 6th Jan. 1836.

We consider it to be our duty to call the attention of the Commissioners to the state in which we have found the Post-office establishment here, before proceeding further with the investigation which we have been directed to make.

Holyhead being not only the most important station under the control of the Post-office for the conveyance of the mails, but also the place where the vessels from all the other stations (with the exception of Dovor) are generally sent for repairs, our inquiries have been more minute here than at any of the other stations. We were anxious to collect full and correct information, to enable the Commissioners to judge of the system adopted by the Post-office, in the control and management of what may be considered the head-quarters of the packet establishment. The Commissioners are aware that Mr. Freeling is the only person who examines the accounts, with a view to check the expenditure in London, and that he has hitherto exercised a general control over the packet establishments. Not being conversant with nautical matters himself, it appears he has generally acted upon the advice of Mr. Goddard, the agent at Holyhead. He has already informed the Commissioners, "that if the agent was good for anything there existed sufficient professional knowledge at the General Post-office to exercise a real and efficient control over the expenditure." "That if the agent should not pay proper attention to his duty, the principal and main object of which was to check improvident expenditure, he would of course be responsible to the Postmaster-General, and take the consequences." Mr. Lawrence, the chief clerk in the Secretary's office, says, "that the accounts are kept precisely in the same manner as in merchants' yards, the agent being discharged by the delivery of certain stores to certain vessels."

On examining the store accounts, our attention was, in the first place, directed to the manner in which the stores were supplied to the different vessels. We found that they were issued by the resident engineer or storekeeper to the mates and engineers of the packets, no demand being made for stores of ordinary consumption; but we were informed that the mates and engineers of the packets kept pass-books, in which every article supplied from the dock-yard for their respective vessels was inserted, and that their pass-books formed a check upon the issues of the resident engineer and storekeeper, as the quarterly returns made by the commanders were extracted from them. Mr. Goddard states that, in examining the storekeeper's accounts of the uses to which stores issued have been applied, he compares them to see if they "agree essentially with the quarterly returns made by the commanders, of all stores received on board the packets which they command, and, when applicable, with the monthly returns by the ship engineers of stores received for the use of this department."

We compared the accounts kept by the storekeeper of the stores issued to each packet during the present year, with the pass-books of the mates and engineers; and the six lists we have

Report of Captain Evans and Mr. Gardiner.

App. (H.) No. 7.

Ibid.

Ibid. 2.

App. to 22d Report of Com. of Rev. Inq. p. 292.

- No. 26. made out of stores charged to those vessels by the storekeeper, and not inserted in the pass books, will enable the Commissioners to judge of how far these accounts are to be depended upon. Stores to a considerable amount appear to have been issued to four colliers belonging to the Post-office during the same period. For these stores no receipt was given, nor any account of them kept, beyond the charge in the storekeeper's day-book. In this day-book of the storekeeper appears an expenditure headed "Spared Stores," which are stores supplied by the storekeeper and resident engineer, without any direct authority from the Postmaster-General.
- Report of Captain Evans and Mr. Gardiner. App. (E.) Nos. 80, 81, 82, 83, 84 & 85. Ibid. 60. Ibid. 22. Ibid.
- The agent justifies himself in permitting these sales by stating, that he has an implied understanding with Mr. G. H. Freeling sanctioning them, and that a regular account of such sales is transmitted quarterly to the General Post-office. Had Mr. Freeling ordered the agent to specify in this account, as is done in the day-book, to whom the "spared stores" had been sold, he would have perceived that officers or workmen in the dock-yard were frequently purchasers, a circumstance that might have induced him to put an immediate stop to these sales, and removed the impression, which it seems has been entertained, that stores were only disposed of to vessels arriving at Holyhead in distress. Although the "spared stores" sold and accounted for to the General Post-office are trifling in amount, the system gave a facility for fraud and peculation, which we have reason to believe, from several cases which we have investigated, and from the report made by Mr. M'Knight to the Postmaster-General, may have been carried to a very great extent. It is only surprising that, after it had become a matter of public notoriety and complaint on the part of the inhabitants of the town, the storekeeper and resident engineer should not have been prevented from selling stores, or appropriating them to their own purposes. As Mr. Freeling himself examines all the agents' accounts, it is extraordinary that he did not perceive there was no return made to the General Post-office of the receipt and expenditure of boiler-plate, or the materials for the construction of boilers, in the accounts of an establishment, the principal object of which is for the manufacture of boilers. The quality of the stores has been represented as very inferior, particularly the oil and tallow supplied for the engine-room, which is said to be often unfit for use, and offensive and disagreeable to passengers. On inquiring why the commanders had not made a representation of the bad quality of the stores, we found it was owing to the manner in which any suggestion of theirs is received by the heads of the department.
- Ibid. 96. Ibid 86.
- This is noticed in a letter from Captain Davis; but a much more striking illustration will be found in the evidence of the late Captain Skinner, before a Committee of the House of Commons.
- Ibid. 23, 34, and 37.
- Captain Skinner at that time particularly mentioned the weakness of the vessel which he then commanded (one of the steamers built by Grahame of Harwich). He stated also that none of the packets were supplied with any code of signals; and that they had not the means of extinguishing a fire on board, which can be so easily obtained, and at a trifling expense, by merely attaching a branch pipe with a hose to the force-pump in the engine-room. Unfortunately none of Captain Skinner's suggestions were attended to. After both he and his mate had been washed overboard, they found it necessary to strengthen the "Escape." Up to this time, however, they have not been supplied with the ordinary means of extinguishing fire, although two of the vessels have been on fire and nearly destroyed.
- Ibid. 61, 68, 69, 73, 74, 75, 76, 77, 87, 116.
- The manner in which the labourers and artificers were paid their wages appeared to us particularly objectionable. All the people under the orders of the storekeeper, and who are engaged by him, he paid weekly, at a public-house of his own in the town, countenancing at the same time certain deductions or subscriptions from their wages to be expended in a particular shop in the purchase of clothes, &c. &c. The engineers, boiler-makers, and smiths were paid by their foreman at other alehouses; these foremen being the persons who kept the account of the labour which they paid for. There was no regular muster in the dock-yard of the workmen, and we have reason to suppose that many have frequently been charged as employed in the dock-yard when they were absent.
- Ibid. 77 and 87.
- On making inquiry respecting a sale of nearly 12 tons of iron to one of the blacksmiths in June last, we found that he had been absent for several weeks in Scotland, although regularly entered in the engineer's books as employed in the yard. The contradictory statements of the storekeeper about the person to whom this iron was sold are worthy of attention.
- Ibid. 87.
- The resident engineer did not, in our opinion, possess the qualifications necessary for his situation. The scientific work was all performed by two of the workmen under him. He has been permitted by the agent to make some important alterations in the engine of the packets, the nature of which Mr. Goddard, by his own statement, appears to have been utterly ignorant of, and there was no authority from the Post-office to permit these alterations. The change he made was by placing a double load on the valves, and altering the slides, so as to produce highly elastic steam on the expansive or high pressure principle, which would have been dangerous with old boilers. The storekeeper appeared totally unfit for his duty; but the frauds which we have investigated affecting both him and the resident engineer, makes it unnecessary for us to say more of these two officers, further than to express our conviction, that had there been any proper control exercised either by the agent or Mr. Freeling, they would have been both removed from their situations long before our arrival at Holyhead.
- App. to Rep. of Select Com. on Post communication with Ireland, p. 60.
- App. (E.) No. 54.
- The Commissioners will observe the anxiety evinced by Mr. Goddard to disclaim all responsibility with respect to the receipts, issues, and quality and prices of the stores, and the accuracy of the accounts kept in the dock-yard. We cannot, however, imagine that it was intended to intrust the entire control of the store department to the storekeeper and resident engineer, when we refer to the evidence of Mr. Freeling and the minute specification of Mr. Goddard's duties in his letter to the Commissioners of Revenue Inquiry.
- App. (H.) No. 24.
- App. (E.) No. 28
- App. (H.) Ibid. Nos. 5, 8. App. to 22d Report of Com. of Revenue Inq., p. 292.

Mr. Goddard admits having sanctioned the sale of stores by the resident engineer and storekeeper to private individuals; he also says, that he permitted the resident engineer to work up articles in the dock-yard for his own emolument; to take smith's coals from the store and repay them in kind, without any account or check being kept of the quantity taken out, or returned into store. Mr. Goddard was also not only aware that the resident engineer and storekeeper were both engaged in trade, but has employed the vessels belonging to Mr. Johnstone, for the conveyance of Post-office stores from Liverpool, to the entire exclusion of the other vessels trading between Holyhead and Liverpool, the owners of which had offered to convey the stores for a much less freight than was charged by Johnstone, the resident engineer. The person employed as gatekeeper of the dock-yard, and who had to examine the passes, we found, could neither read nor write English. After our arrival at Holyhead, Mr. Goddard became aware, for the first time, that this gatekeeper had a key of the dock-yard, and that one of the labourers had a key of the coal-store.

When we have the honour of laying before the Commissioners the information which we have collected at the different stations, it will be necessary to call the attention more particularly to the manner in which the packet establishments have been managed by Mr. Freeling. From the opportunity afforded him, not only by the examinations of the accounts in London, but by his personal inspection of the stations, it appears extraordinary that the malpractices which have been permitted to exist should have escaped his attention so long.

We now beg to submit to the Commissioners the urgent necessity which, in our opinion, exists for taking immediate steps to place the control of this station in the hands of some trustworthy and experienced naval officer, who, with the assistance of Mr. M'Knight, may take the entire charge of the establishment until the Commissioners have made their general report on the packet establishments, and some final decision has been come to by the Lords of the Treasury, as to the footing upon which this important branch of the Post-office establishment is to be permanently placed.

Copy of Treasury Minute of 19th January 1836, upon the foregoing Report.

Read letters from the Commissioners of Post-office Inquiry, dated 16th inst., transmitting a special report from Captain Evans and Mr. Gardiner on the subject of the establishment of the post-office at Holyhead for the steam-packet service, together with the evidence on which it is founded, and recommending the dismissal of Mr. Roberts, the storekeeper, and Mr. Johnstone, the resident engineer, from the public service; and that a more efficient and trustworthy person should be appointed agent to the packet establishment there, in the room of Mr. Goddard.

Write to the Postmaster-General, and transmit to him the several reports and papers. Inform him that upon a full consideration of the report and evidence, my Lords concur entirely with the Commissioners respecting the conduct of the storekeeper and engineer, and consider it their imperative duty to direct that they be forthwith dismissed from the public service. Express to the Postmaster-General the desire of my Lords that he will take the necessary measures to carry these directions of my Lords into effect without delay.

With respect to Mr. Goddard, my Lords understand that he has already tendered his resignation, and that such resignation has been accepted. However much my Lords would object, as a general course, that any public servant should be permitted to resign while an inquiry upon his conduct is pending, my Lords, in the present case, do not regret Mr. Goddard's retirement. His neglect and misconduct rendered it impossible that he should continue in his situation; but my Lords are glad to have it in their power thus to mark the distinction between the case of this gentleman and that of the other two officers who have been guilty of misconduct of a still more serious character.

State further to the Postmaster-General that, taking into consideration the circumstances which have come to light, and the inquiry now in progress, my Lords are of opinion that it is absolutely necessary that proper persons acquainted with the course pursued in the naval service should be appointed to fill the situations of agent and engineer. That my Lords will communicate with the Lords of the Admiralty for the purpose of obtaining from their Lordships parties adapted to the service, and will, upon receiving the recommendation of the Board of Admiralty, furnish, without delay, the names of the individuals to the Postmaster-General, in order that he may take the necessary measures for their appointment.

My Lords wish distinctly to be understood that such arrangements must be only considered as temporary, and dependent upon the result of the inquiry which is now in progress. But, in the mean time, they consider it necessary that the most rigorous exertions should be immediately used to put an end to the peculation which my Lords have too much reason to fear has prevailed in the yard at Holyhead to a considerable extent. In furtherance of this object, my Lords consider that the gatekeeper, Owen Thomas, should be immediately removed, and any other party in the yard who may be found to have been guilty of peculation should be at once dismissed; and my Lords rely upon the zeal and firmness of the Postmaster-General to invest the officers who may be selected to perform the duty, together with Mr. M'Knight, with ample powers to investigate and put an end to a system which appears to my Lords a disgrace to the public service.

My Lords reserve any opinion upon the general question respecting these packet establish-

Letter from Mr.
Freeling.
13th March 1836.*Letter from Mr. Freeling to the Postmaster-General.**Paris, 13th March 1836.*

MY LORD,—It has not been without some hesitation that I have decided upon addressing your Lordship with reference to the report upon the Holyhead station, made to the Commissioners of Post-office Inquiry by Captain Evans and Mr. Gardiner, dated 6th January last, as I feel assured that the Lords of the Treasury have too strong a sense of the most ordinary principles of justice to consider me as in any degree answerable for frauds or irregularities committed at a distant packet station, in charge of a responsible officer on the spot, simply because the performance of this, one of the numerous branches of the Post-office service, happens to fall within my general superintendence in London. With equal propriety a secretary of the Admiralty might be deemed accountable for any irregularities in the dock-yard at Plymouth.

There is, however, such a laboured attempt throughout that report to attach some degree of blame to me, personally, that, coupled as it is with the periodical statements in a newspaper, proceeding evidently *from authority* of some sort or other, tending to identify me with what has occurred at Holyhead (a coincidence far too peculiar to be accidental) that I must entreat your Lordship's permission to offer some observations on the subject. Your Lordship will be good enough to understand that it is far from my intention to palliate the malpractices or irregularities that have taken place at Holyhead, whether confined to the small amount that has been proved, or carried to the greater extent that has been anticipated; my object is simply to place in its proper light what I humbly conceive to be a most unfair and uncalled for attack upon me by Captain Evans and Mr. Gardiner.

It is stated that, not being acquainted with nautical matters, I have exercised a general control over the packet establishment: this is correct. On the first introduction of steam packets, there was not any quarter to which the Post-office could turn for the advantages to be derived from experience; the system was wholly novel; the Post-office had to feel its own way. Every step connected with the employment of steam vessels upon the various packet stations successively, and their building and outfit, was taken with the full concurrence and approbation of the Government from time to time; the detail rested naturally with the Post-office, and, from my situation in the department, the general superintendence of the new system devolved upon me, as many other things have done, simply because there was no other person in whose hands they could be placed. The management of the packet service was by no means an object to be coveted by me. I received no increased pay for the additional labour that was thrown upon me; the patronage was wholly with the Postmaster-General and the Government; not one of all the officers has been appointed through any interest of mine, nor has any tradesman been employed through any favour or affection on my part. I might state that to the Post-office alone belongs the merit of having first shown that steam packets could make the passage of the Irish Channel all the year round, and could go to sea when no other description of vessel could get out. I might appeal, also, to the manner in which the steam packet service of the Post-office is performed—to the precision and certainty with which the numerous daily communications with Ireland are maintained, and to the security and efficiency of the packets under all their manifest disadvantages of fixed hours of despatch under all circumstances of tides and weather, compared with the best of the private vessels, as proof that it has worked well and most advantageously for the public. My task, however, is self-defence. Holyhead being the steam-packet station the first established, and forming the main link in the communication between England and Ireland, the then Postmaster-General felt it of so much importance to secure the personal superintendence of an agent in all respects calculated to maintain the efficiency of the service, that he wholly abandoned all idea of patronage in the appointment, and selected Captain Goddard for the purpose.

His qualifications were of the highest order; he had been the senior captain upon the station, and no man could be better acquainted with the Irish Channel; he was a thorough seaman, and in other respects of superior abilities and acquirements; his position in the county for which he was an active magistrate, was a guarantee, if any could be required, for his integrity and respectability; his long and faithful service, unblemished character as an officer and a gentleman, and his undoubted ability, all tended to designate him as the individual the best qualified for the duty. Lord Chichester accordingly appointed him agent at Holyhead unsolicited, and, by so doing, saved, in addition, the charge upon the Revenue for Captain Goddard's retirement allowance, of which he was in the receipt on the abolition of the sailing packets. At this period there were two steam-packets only, and the depôt of stores consisted of a small building, containing a few duplicates of those parts of the machinery the most exposed to wear, a small quantity of oil, and tallow, and coals, the stock being in proportion to the number of vessels employed. As Holyhead did not possess the means of meeting the demands for the most ordinary contingencies, it was soon found that a gang of workmen from one of the engineering establishments was constantly necessary; and, independent of the great expense of such a course, the delay in procuring every article, however trifling, either from Liverpool or Birmingham, added considerably to the cost, and occasioned much interruption and injury to the public service; so far was the Post-office from desiring to set up any works of its own, that engineers were requested to set up a branch of their establishment at

No. 29.

Letter from Mr.
Freeling.

Holyhead, but in vain. A ship-builder was induced to form a small yard, but it was abandoned from the want of business. The Post-office being thus thrown upon its own resources, Captain Goddard, with the full concurrence and approbation of the Postmaster-General, gradually enlarged the establishment on shore in proportion to the wants of the service, until it assumed its present shape; and as it was necessary to have a corps of artisans on the spot for the immediate repair of any casualty to the machinery, especially the boilers, in order to prevent the detention of the mails and passengers, he employed them, when not otherwise engaged, in manufacturing new boilers, to which business most of them had been brought up: these new boilers cost little more than half as much as those supplied by the manufacturers, and lasted at least as long; and the best proof that the plan was good is to be found in the fact that the principal steam companies, who are sufficiently alive to their own interests, have adopted the course pursued by the Post-office.

Such are the circumstances attending the appointment of Captain Goddard, and the formation of the establishment at Holyhead. He was the responsible professional officer of the Postmaster-General at the station, for the purpose of comptrolling and superintending the performance of the public service, and the means for carrying it on; and I cannot do better than refer to the extract from my evidence before the Commissioners, which Captain Evans and Mr. Gardiner have had the fairness to quote,—an evidence, be it recollected, given before there was the slightest suspicion that anything wrong was going on at Holyhead.

But I beg leave to ask broadly, whether it is possible that *any person*, whether conversant with nautical affairs or not, could have checked in London an account of the expenditure of stores at Holyhead, for the maintenance and repair of the steam-packets? If the responsibility could attach to *any officer* in London, where was the use of an agent at all at Holyhead? If the duty consisted merely in reporting the arrival and departure of the packets, the postmaster would have been sufficient. It is only upon the spot that anything like a check can be maintained; and even then it must only be superficial, unless the agent should, in person, superintend the application of every sheet of boiler-plate, and every pound of tallow, or store of other description issued. The accounts of the receipt and expenditure of stores were transmitted every month to London, signed by the storekeeper, and certified by the agent, the Postmaster-General's officer on the spot, upon his responsibility, to be correct. But perhaps the meaning of Captain Evans and Mr. Gardiner may be, that the whole system was wrong, and that the packets being under my "general control," I ought to have placed it on a different footing.

These gentlemen, however, must be ignorant that there is such a person as the Postmaster-General; and their censure, though levelled at me, applies more properly to my superior officers for permitting the continuance of a system, of the existence of which, with all its real or alleged defects, they must have been thoroughly conversant; for I presume they will scarcely pretend to say that the office is a sinecure; and your Lordship and your predecessors can best inform the Lords of the Treasury whether anything relating to the packet service, is, or can be, done without your knowledge, concurrence, and approbation. But the Postmaster-General is no more to blame in this respect than his subordinate officer. As far as regards myself, I have already shown that the "general control" of the packets was not of my seeking. I should most thankfully have been relieved from it, and have for years anxiously looked forward to the time, when, even if it did not occur to the Postmaster-General, I might with propriety request that the superintendence of the packets might be placed in other hands, from the moral and physical impossibility of any one person continuing to perform the duties that have devolved on the assistant secretary. That time, however, had not yet arrived. Ever since 1821, now 15 years, the Post-office has been, with scarcely any interval, subject to the continued investigations of Commissions of Inquiry (a proof, I may observe, that the arrangement of its complicated details is not quite so easy a matter as some persons have imagined); not to mention the occasional intervention of Committees of Parliament; and during the greater portion of this time, it has been an open question with the Government, whether, in the progress of steam navigation, the packets ought to continue the property of the Crown, or whether the service should be performed by contract. This question between contract and establishment has never yet been settled; and it would have been premature and improper in the Postmaster-General to have made any new appointment of inspector of packets, or any new arrangement of a branch of the service which might, in a few weeks or months have been abolished, pending the long and constantly expected decision of the Government. Captain Evans and Mr. Gardiner could scarcely have been unacquainted with this fact; and it might perhaps have been expected, that in fairness they should have adverted to it in their strictures upon me for exercising a general control over the packet service, not being acquainted with nautical affairs.

As for the course of proceedings in the mean time, the existing arrangement afforded the necessary provision for the exigencies of the service. Captain Goddard was responsible for the immediate control upon the storekeeper and resident engineer, and they, in their turn, formed the check upon any misapplication of the agent; the principle of check, therefore, was complete and satisfactory, if acted upon, pending the decision of the Government as to the continuance of the establishment at Holyhead, subject always to the possibility of inattention and collusion, from which no system, in a greater or less degree, can be exempt.

It cannot be necessary for me to enter into any detailed explanation as to the "spared stores." The Postmaster-General, in the knowledge that there were no private establishments at Holyhead from which stores might be procured by any vessel in need of them, had readily consented to spare what might be required, on payment of the cost and charges: it would have formed matter of just complaint against the department, if this accommodation had been withheld. A statement of the quantity and value accompanied the agent's accounts,

No. 29.
 Letter from Mr.
 Freeling.

and the Accountant-General took care that the proceeds were brought to account: they were so very trifling, a few pounds only in the course of each quarter, and the items appeared to come so completely within the spirit of the Postmaster-General's views, that no question was necessary, even if there had not been any agent at Holyhead. It appears that Captain Goddard did order the practice to be discontinued as soon as there was a complaint that it was carried to too great an extent; and I am not aware that the Postmaster-General himself could have done more.

It is deeply to be regretted that your Lordship's application, supported as it was by the wishes of the Commissioners of Inquiry, that one of the professional Lords of the Admiralty should be joined to the Commission in the investigation of the packet service, could not be complied with. The professional character and experience, the responsibility and impartiality of such an officer, would have been alike satisfactory to the Government, the Postmaster-General, and the public, and his opinions would have been entitled to a degree of weight and confidence which cannot attach to the mode in which the Inquiry has been conducted. His professional knowledge would have qualified him for the task; he would have ventured to do justice, and whilst he would have condemned what was wrong, and have pointed out what might be better done, he would not have hesitated to bear testimony to the endeavour, at least, to do what was right. The Inquiry, however, has been delegated to two individuals—the one, a gentleman studying the law, who must be at least as unacquainted with nautical affairs as myself; and the other, a junior commander in the navy, a candidate for promotion, who was recommended to the Commissioners of Inquiry from the Admiralty, because he happened to have been in the command of a steam vessel at Jamaica, which was employed chiefly as a tender, for the conveyance of officers and troops from one part of the island to another—a duty which could not afford him the opportunity of seeing as much real steam service in the whole course of his employment as the commander of one of the Post-office steam packets would encounter in the course of three months; and yet upon this very shallow qualification he does not hesitate, in conjunction with his associate, to set up his opinion in opposition to that of the first engineers of the day—to treat with contempt officers of longer standing, and infinitely greater experience and professional knowledge than himself, and to condemn a public department by wholesale.

Captain Evans and Mr. Gardiner have fallen into an error, too frequent amongst subordinates to whom an investigation has been entrusted: they conceive that the object of all inquiry must be crimination, and that the value of their services must be in the precise ratio in which they can contrive to find fault; they must have the *satisfaction* of meeting with rebels. This feeling perhaps may not be surprising, recollecting the professional course of education of one of the parties; but it was scarcely to have been expected that such a line would have been selected as the road to employment, or promotion, by an officer in His Majesty's navy.

I proceed, with very sincere reluctance, to that part of the report relative to the late Captain Skinner. Your Lordship and the Lords of the Treasury may not improbably have already asked yourselves the question, what his death can possibly have to do with the quality of the stores at Holyhead, or their misapplication? I believe that satisfactory evidence has already been tendered to the Commissioners, or the Lords of the Treasury, to disprove the assertion of their inferior quality: this, however, is comparatively a secondary consideration. The object of Captain Evans and Mr. Gardiner is evidently to convey the impression that the death of Captain Skinner and his mate is to be laid to the charge of the Post-office, because, "unfortunately, none of Captain Skinner's suggestions were attended to." But what are the facts? They were swept off the deck by a heavy sea breaking on board, Captain Skinner being less able to protect or secure himself from having but one arm, and the mate shared his fate in endeavouring to save him. Captain Evans, as a seaman, should not have been ignorant that this could have nothing to do with the strength or weakness of the vessel, but was the act of God. He might as well contend that the loss of Captain Birney and several of his crew, who a few months since were washed off the deck of the Admiralty packet, the "Star," was through the mismanagement of that Board. So gross a charge ought not to have been made without some inquiry and consideration; and if Captain Evans and Mr. Gardiner had made themselves acquainted with the facts, as it was their duty to have done, they might have learnt that this weak vessel, the "Escape," when under the command of Captain Skinner, was run upon the rocks in Holyhead Bay, where she lay for several hours not waterborne; and notwithstanding all the weight of her machinery, was found, upon examination, not to have strained in the slightest degree. I content myself with saying, that this part in particular of the report of Captain Evans and Mr. Gardiner is by no means creditable to them. It is, however, valuable, as shewing what degree of weight is to be attached to their statements, and to their impartiality, from this evident attempt to distort anything to the prejudice of the Post-office, even to the extent of loss of life.

The next charge is, that the resident engineer did not possess the qualifications necessary for his situation; that he had loaded the valves, which would have been dangerous with old boilers; that the storekeeper was totally unfit for his duty; and that if any proper control had been exercised, either by the agent or myself, they would have been both long since removed from their situations. The answer to all this is very simple: Johnstone, the resident engineer, whatever he may have proved himself in other respects latterly, is a man whose professional knowledge is now questioned for the first time, on the authority of Captain Evans and Mr. Gardiner. He was regularly bred a mechanic under Mr. Napier of Glasgow, who has the highest opinion of his ability; he was recommended to the Post-office by Messrs. Bolton and Watt, and during a service of many years he has shown that he was thoroughly acquainted with the principle of the steam-engine, and at the same time a complete practical engineer.

The alteration in the valves was made with the approbation of Messrs. Bolton and Watt, whose opinion on such matters will doubtless be considered as satisfactory as that of Captain Evans and Mr. Gardiner; but, be this as it may, I have only to refer to the plain fact, that with ten passages every day across the Irish Channel, performed by the Post-office packets, at all seasons and under all circumstances, for so many years in succession, there has never been any accident or danger from this alleged "high pressure" upon the valves of the boiler. With regard to the storekeeper, I am not in the recollection that there was ever a single complaint of neglect or irregularity against him during the many years he held the situation which was the best proof that he conducted himself to the satisfaction of his responsible superior officer upon the spot; and I must own that I do not see upon what grounds, under these circumstances, I could have been justified in proposing to the Postmaster-General to remove these persons from their situations.

The last charge preferred against me is, that from the opportunities afforded by my examination of the accounts in London, and by my personal inspection of the stations, it appears extraordinary that the malpractices which have been permitted to exist, should have escaped my attention so long. As I have already shown the utter impossibility of any person in London checking the accounts of the issue and application of stores supplied to the packets on a station nearly 300 miles distant, the last portion of the preceding paragraph is all that can be necessary to notice. I have elsewhere stated that the stores at Holyhead originally consisted of a small building for the deposit of a little oil and tallow for present use, duplicates of machinery, and the necessary quantity of coals; and that the works have gradually assumed their present shape under the hand of Captain Goddard.

It so happens, unfortunately for the justice and impartiality of this attempt to convict me of neglect of duty, that since the erection of the works, and the formation of the establishment, I have never been at Holyhead on the public service. I was there once only upon leave of absence on my route elsewhere, and availed myself of a detention occasioned by bad weather, to go through the works, which I then saw casually for the first time, and without the opportunity, even if I had had the desire, to examine, much less to investigate, the forms of account and the checks upon the receipt and issue and expenditure of the stores. Captain Evans and Mr. Gardiner might easily have learnt this by one single question;—at all events, it was their duty to have satisfied themselves as to the fact, before they ventured to attach blame to any one upon such a foundation.

I regret that I have been compelled to trouble your Lordship at so great length, and that in defending myself against a most unmerited and unfair attack, and pointed attempt at injury, I have been under the necessity of showing that the Report of Captain Evans and Mr. Gardiner is not characterised by that accuracy, impartiality, and judgment, which alone could entitle their opinions to any degree of weight or respect, and prove satisfactory to the Commissioners or the public. Captain Evans, as a seaman by profession, should have known better than to put his name to such a report: and Mr. Gardiner ought to have hesitated, as he could know little or nothing about the matter. The various Postmasters-General, under whom I have had the honour to serve now for nearly 30 years, can best bear testimony whether I have ever flinched from my duty, or shown any disposition to neglect it; and to them I fearlessly appeal for my official character. As to the management of the packet service, generally, if there has been anything wrong, the Postmasters-General must be parties to it; for, as your Lordship well knows, I have done nothing but with the full concurrence and approbation of my immediate superior officers. Why, then, am I to be singled out as the object of attack by Captain Evans and Mr. Gardiner, in the plenitude of their delegated authority and irresponsible powers? The Lords of the Treasury and the Commissioners of Inquiry are too just to attach any censure to me on account of malpractices of inferior officers at an outpost (which certainly have been made the most of), because Captain Goddard, the responsible agent on the spot, either through impaired personal activity after nearly 50 years of *good and faithful service*, or borne down by the pressure of a domestic affliction of far more than ordinary severity, may, within the last year or two, have been unequal to his former habits of active control, and have reposed too much confidence in a quarter in which it has, unfortunately, been abused.

I have the honour to be, my Lord,
Your faithful and obedient servant,
(Signed) G. H. FREELING.

No. 30.

MY LORD,—Having read a letter from Mr. Freeling to the Postmaster-General, dated Paris, March 13, 1836, animadverting on the special report which Mr. Gardiner and I were ordered to make by the Commissioners upon the evidence taken at Holyhead and transmitted by us to the Commissioners, I deem it my duty to call your Lordship's attention to those parts of Mr. Freeling's letter which charge me with the improper performance of my duty.

As in framing the report in question, we confined ourselves to evidence impartially taken, and as the representations which were then made to the Commissioners were directed against the system of management of the packet department at Holyhead, and were not conceived in the spirit of hostility to any individual, his character, or interests, so in now noticing Mr. Freeling's letter, I shall scrupulously confine myself to such a plain statement as must satisfy your Lordship that my report was the only one, which, as an officer in His Majesty's service, I could make consistently with the facts that were before me.

When I had the honour of being selected by the Admiralty to assist your Lordship, Mr.

No. 30.

Letter of Captain Evans to Lord Duncannon, in reply to Mr. Freeling's Letter.

No. 30.

Letter of Captain
Evans, in reply to
Mr. Freeling's Letter.

Freeling was pleased to inform the Commissioners that I was a particular friend of his, which I admit to be true, and I can conscientiously add, that I never entertained the slightest personal feeling against him, or any other individual whose name was mentioned in that report; and although Mr. Freeling now seeks to injure me in the most tender point,—namely, my professional character,—by denying my competency, I shall only observe that, whilst I am honoured with the good opinion of my professional superiors, and of my brother officers, the remarks of that gentleman on such a subject will not move me from the dispassionate discharge of my duty to the Commissioners and the public, nor induce me to follow the example of Mr. Freeling, who, in disclaiming all responsibility himself, renders it impossible, after the statement of Mr. Goddard, for your Lordship to find who is responsible to the public.

It seems strange, however, that Mr. Freeling, who states that the commanders of the Post-office packets “possess infinitely greater experience and professional knowledge than I do,” should never have attended to any of their suggestions, as shewn in their evidence, whether taken by us, or upon former inquiries.

From this inattention to the suggestions of experienced and efficient officers, the absence of a professional control in London, and the entire reliance placed on the agents, who, in some instances, were civilians, have sprung the whole of the irregularities which I observed in the maritime branch of the Post-office. This evil had grown to such magnitude, as your Lordship will perceive from Captain Duncan's case, and much more forcibly in the statement of that highly meritorious and intelligent officer, Captain Davis, of the “Gulnare,” that the captains were afraid to report, or even take official notice of anything that might occur to them for the benefit of the service. Both Mr. Gardiner and I found it absolutely necessary to allude to this circumstance in our Special Report on Holyhead.

The case of the “Escape” was mentioned, not from the motives imputed by Mr. Freeling, but to shew how little attention was paid even to the *senior* and most experienced officer in the service of the Post-office,—namely, the late deeply lamented Captain Skinner.

A reference to that excellent officer's evidence before a Committee of the House of Commons on Post Communication with Ireland in 1832, will prove this fact, and likewise shew that it was the weakness of the upper works and not of the bottom of the “Escape” that he complained; these are his words, confirmed by the evidence of the carpenter: “The bottom of the vessel appears very firm, and very well put together as far as the floor heads; the cabin-deck is not fastened at all; there is no shelf-piece for the beams, or anything to lodge them upon; they lodge upon the side; they are just fixed to the sides, and there is a spike on each end, and I believe that is all, and the fore-castle-deck is exactly the same.” And again, he says, as a proof of the weakness of the “Escape's” upper works, “My vessel was struck by a sea about two years ago, the deck was absolutely lifted or parted from the side forward, so that the water rushed down in torrents; all the beds were wet; my cabin and the mate's were filled; this would not have been the case if she had been properly fastened.” He also states, that after the above accident, three iron knees were put into the vessel *forward* to secure the deck to the sides, and that three or four of the *foremost* stanchions that were carried away when the anchor was washed in board had been replaced by stronger ones. It was the *after* bulwark and stanchions that were carried away when Captain Skinner and his mate were washed overboard, and the evidence of John Griffith, who was carpenter on board of the “Escape” at that time, and who now fills the situation of foreman of the shipwrights at Holyhead, will shew not only that the “Escape” was considerably strengthened after Captain Skinner's loss, but also disprove the assertion of Mr. Freeling, that I had not made any inquiry on the subject. The admitted firmness of the “Escape's” bottom will naturally account for her not straining much when run on the rocks in Holyhead Bay, whilst, on the other hand, the unfortunate weakness of her upper works, particularly *abaft*, where they had *not* been strengthened, may account for their being washed away, when the sea struck her upon the melancholy occasion of Captain Skinner's loss.

Mr. Freeling states, that no complaints were made of Mr. Roberts the storekeeper before my arrival at Holyhead, and that he could not have recommended the dismissal of that officer. Captain Skinner, in page 59 of his evidence, states, that “Mr. Roberts the storekeeper, who *superintended* the repairs of the hulls of the vessels, was only a common seaman, without any knowledge of a shipwright's work, and therefore incompetent to perform the duty imposed on him.” Mr. Goddard the agent acknowledges that Mr. Roberts the storekeeper was incapable of keeping accounts, and was allowed an efficient clerk in consequence; yet Mr. Roberts was suffered to remain at Holyhead, until Mr. Gardiner and I detected him in speculation.

Mr. Freeling observes, “Johnstone, the resident engineer, whatever he may have proved himself in other respects latterly, is a man whose professional knowledge is now questioned, for the first time, on the authority of Captain Evans,” &c. On this head, likewise, the evidence of Captain Skinner is important; that officer stated, “that the packets were *not* supplied with the means of extinguishing fire, and that, although Captain Stephens had made an *official representation* in writing on that subject, no notice was taken of it.” On my arrival at Holyhead, I not only found that there had not, up to that period, been any means adopted for extinguishing fire (except by scuttling the decks), but that even the coals were stowed against the boilers without any space between them; the boilers actually forming one side of the coal-boxes. To this highly dangerous and improper mode of fitting the steam vessels, and adopted by Mr. Johnstone, the resident engineer at Holyhead, are to be attributed the numerous accidents by fire which have occurred on board the Post-office packets, and particularly in the case of the “Aladdin,” on the Milford station, which vessel has been twice nearly destroyed by fire within the last month, as stated in the letter of Captain William Evans, of the “Vixen,” an officer who appears to have made steam navigation his peculiar

study, and who, I was happy to observe, had succeeded to an eminent degree. The attempted comparison between the situation of the "Escape" and "Star" packets, in the following extract from Mr. Freeling's letter, is, to put the best construction upon it, evidently suggested by a total ignorance of nautical affairs. Mr. Freeling states, "That I might as well contend that the loss of Captain Birney, and several of his crew, who a few months since were washed off the deck of the Admiralty packet, "Star," was through the mismanagement of that Board."

The "Escape" was perfectly under command, and after the accident occurred was instantly rounded to, steered back over the place where the sea struck her, and every endeavour made to save the unhappy sufferers, but in vain. The "Star," on the contrary, was thrown on her beam-ends, during a hurricane; her tops in the water, dead-lights stove in, her rudder-head split; the sea swept everything clear away from stem to stern-post; and when, after a lapse of three minutes, she righted, her masts and bowsprit were gone, and from five to six feet water in her hold. In reality, the question is not as to the similarity of the accidents, but whether the Board of Admiralty are answerable for neglecting representations *which were never made* to their Lordships by the Commander of the "Star," or any other person, as to the weakness of that vessel, in the same degree as the superintending authorities of the Post-office packet establishment are responsible for not instantly causing to be made good those defects complained of in Captain Skinner's evidence with respect to his vessel, the "Escape."

I can assure you, my Lord, that in thus troubling your Lordship with these details, I have been influenced solely by an anxiety to show that the Report, even in its most minute particulars, was founded on evidence and upon observations of the actual circumstances; and that, as in what I have before done I had no personal feeling against Mr. Freeling, so in now answering his attack, I have no other motive than that of vindicating myself in the eyes of your Lordship and the public.

I have the honour to be, my Lord,
Your Lordships' most obedient Servant,
GEORGE EVANS, Commander R.N.

No. 30.
Letter of Captain Evans in reply to Mr. Freeling's Letter.

No. 31.

Office of Woods, 19th May 1836.

MY LORD,—I have read with regret a letter addressed by Mr. Freeling to the Postmaster-General, in vindication, as he says, of his own conduct, but written, as it would appear, with the intention of invalidating the report submitted by Captain Evans and myself to the Commissioners of Post-office Inquiry. Captain Evans has made a reply to those observations of Mr. Freeling, which more immediately affect his professional character and conduct; and I should have been glad, with your Lordship's permission, to have had an opportunity of showing, by reference, in detail, to the evidence and other documents collected in the course of the Inquiry, that the report was fully borne out by the facts which were disclosed. In deference, however, to the opinion of your Lordship, and the assurance on the part of the Commissioners that Mr. Freeling's letter, and the other statements received from Holyhead, do not, in their opinion, invalidate the accuracy of the report in question, I forbear from trespassing at any length upon your Lordship's attention.

I should not, under any circumstances, have thought it necessary to notice the offensive and personal allusions of Mr. Freeling, being satisfied that my conduct, since I had the honour of being appointed to this most arduous and important inquiry, will bear the strictest scrutiny, and cannot be affected by the unjust and uncalled for aspersions which are attempted to be thrown upon it.

Mr. Freeling has taken exception to the terms in which he is mentioned in connexion with the management of the packet department, and assumes that we have unfairly represented him as having the control of that establishment. In reporting to your Lordship the state of the establishment at Holyhead, and in suggesting to the Commissioners the necessity which appeared to exist for placing it, at once, under some efficient superintendence, I confess it appeared to me necessary to show with whom the actual control might be presumed to exist, more especially as the agent on the spot disclaimed for himself all responsibility. On referring to the evidence in the hands of the Commissioners, I found it stated by Mr. Freeling and Mr. Lawrence, that the packet service was particularly under Mr. Freeling's superintendence, and had been almost since his first introduction to office; that he examined all the packet accounts, going through every item of them himself, and that these accounts were not supposed to be examined by the Postmaster-General, who invariably authorised the making out the warrant for payment as it passed to him from the Secretary's office.

It further appeared that Mr. Freeling was not only in the habit of examining the accounts in London, but had frequently visited the packet stations*; and the nature of the duties which

Mr. Gardiner's
Letter to
Viset. Duncannon,
in reply to Mr.
Freeling's observa-
tions.
Report of
Capt. Evans and
Mr. Gardiner,
App. (H.) p. 293.

he performed may be inferred from a declaration of his own, that on the appointment of a new agent at Liverpool, who was not quite ready at the duty, he went down there to put him to rights in a variety of small details in which he required instruction.

Mr. Freeling, in his letter, insinuates that I have been guilty of misrepresentation in stating that he personally visited the packet stations. The following is the paragraph to which he so strongly objects:—

“ From the opportunity afforded Mr. Freeling, not only by the examination of the accounts in London, but by his personal inspection of the stations, it appears extraordinary that the malpractices which have been permitted to exist should have escaped his attention so long.”

I had come, my Lord, to the conclusion, that Mr. Freeling personally inspected the packet establishments from observing in the Post-office incident bills, frequent charges made for his travelling expenses to the different stations. My only object, however, for introducing Mr. Freeling's name was, to show what a remarkable absence of proper control existed, and to prove the necessity of making some temporary provision for the more efficient superintendence of that branch of the service.

In the first letter I addressed to your Lordship after my arrival at Holyhead, I mentioned that a system was prevalent there of selling stores from the dock-yard, and permitting work to be done for the emolument of the officers, which seemed to afford great facility for the commission of frauds, and which was at variance with the regulations of every other Government department. It appeared that this practice of selling stores had been going on for the last twelve years*; and, on the examination of the agent, he admitted that he had no direct authority from the Postmaster-General or the Post-office, but added that he had *an understanding with Mr. Freeling which he considered justified him in issuing these supplies to private individuals.*

Coupling the facts of Mr. Freeling having frequently visited the Holyhead station, with this statement of Mr. Goddard, I did consider it most extraordinary that the sale of Government stores by officers of the dock-yard, and the direct personal interest which one or more of them had in the supply of these stores, should have been permitted.

Under the peculiar circumstances of Mr. Goddard's case, I decline making any observations upon the two letters which he has addressed to Mr. Freeling subsequent to the Treasury Minute of the 19th of January last.

I have the honour to be, my Lord,

Your obedient and faithful Servant,

J. R. GARDINER.

*The Viscount Duncannon,
&c. &c. &c.*

App. (E.) No. 22.

No. 32.

Contract for conveying the Mails between London, Hamburg, and Rotterdam, by Steam Boats.

No. 32.

THIS INDENTURE, made the twenty-ninth day of November, in the year of our Lord one thousand eight hundred and thirty-four, between the Most Noble Francis Nathaniel, Marquis of Conyngham, His Majesty's Postmaster-General, of the one part, and the General Steam Navigation Company (incorporated under an Act passed in the fourth year of the reign of His Majesty, King William the Fourth, intituled “ An Act to amend and enlarge the powers of an Act passed in the second year of the reign of His present Majesty, intituled an Act for granting certain powers to a company called the General Steam Navigation Company”) of the other part, witnesseth that in consideration of the covenants and agreements hereinafter contained on the part of the said Francis Nathaniel, Marquis of Conyngham, the said General Steam Navigation Company do hereby for themselves and their successors, covenant, promise, and agree with and to the said Francis Nathaniel, Marquis of Conyngham, his executors and administrators, in manner following: that is to say, that the said General Steam Navigation Company, and their successors, shall and will, for and during the term of twelve calendar months, to commence and be computed from the fifteenth day of December next, and for and during such further time as this present contract or agreement shall continue in force by virtue of the stipulation in that behalf hereinafter contained, faithfully and diligently convey, or cause to be faithfully and diligently conveyed His Majesty's mails or bags of letters from London to Hamburg, and from Hamburg to London, and from London to Rotterdam, and from Rotterdam to London, on such days in the week as the Postmaster-General for the time being may, from time to time, direct or appoint, not exceeding twice in each week from London to Hamburg, and twice in each week from Hamburg to London, and not exceeding twice in each week from London to Rotterdam, and twice in each week from Rotterdam to London, by means of good and substantial steam vessels, to be approved of by the Postmaster-General or his deputies or agents on his behalf, with engines of reputed 100-horse power at the least in each of the vessels employed between London and Hamburg, and of reputed 80-horse power at the least in each of the vessels employed between London and Rotterdam, with skilful and competent officers and engineers, and a sufficient crew of able seamen to be supplied and maintained in manner and under and subject to the regulations and agreements hereinafter mentioned and contained.

2. That it shall be lawful and competent for the Postmaster-General for the time being, or

* From the accounts of the Storekeeper at Holyhead, it appeared that in the quarter ending October 1824, the quantity of stores thus sold and accounted for to the General Post-office was five times as great as in the same quarter in 1835.

No. 32.

Contract for conveying the Mails between London, Hamburg, and Rotterdam, by Steam-boats.

his deputies or agents on his behalf, to direct the said steam vessels on their passage to and from Hamburg, to land and receive bags of letters and despatches at the island of Heligoland and the port of Cuxhaven, and any other port or ports in the Elbe, and to direct the said steam vessels on their passage to and from Rotterdam to land and receive bags of letters and despatches at Helvoetsluys and any other port or ports in Holland; and that the said Company, or their successors, nor any of their officers, seamen, or servants shall not, nor will, on any account whatever, cause, or procure, or permit, or suffer, the said steam vessels respectively to be detained at any such intermediate ports longer than may be necessary to deliver and receive such bags of letters and despatches; nor shall the said Company or their successors, or any of their officers, seamen, or servants, on any account whatever, cause or procure, or permit, or suffer, the said steam-vessels, or any of them, to touch or stop at any intermediate port or place other than such as shall from time to time be directed and required by the Postmaster-General for the time being, his deputies or agents.

3. That if at any time by reason of the accumulation of ice it shall be impracticable for the said steam vessels to proceed to and from the port of Hamburg, or to and from the port of Rotterdam, then instead of such vessels conveying the said mails or bags of letters to and from Hamburg, the said vessels shall land and receive the mails and despatches at Cuxhaven or any other more convenient place in the Elbe, but if the said steam vessels cannot enter the Elbe, then at the island of Heligoland, and instead of such vessels conveying the said mails or bags of letters to and from Rotterdam, the said vessels shall land and receive the mails and despatches at Katwyck or Schevening in Holland, or such other ports or places as the Postmaster-General for the time being, his deputies or agents shall from time to time require, or (in the absence of any instructions from him or them) at the nearest port or place to Rotterdam which the vessels can reach.

4. That the said steam vessels respectively shall proceed, direct, on their respective voyages outwards and homewards, immediately after the mails and despatches shall be received on board, and shall not carry or convey in, upon, or about any such vessels so much freight or cargo as will impede the conveyance of the mails with due expedition; and further, that they, the said Company and their successors, and the officers, seamen, servants, and others in their service, or employed by them in or about any such steam-boats or vessels, shall and will at all times, on being thereunto requested by the said Postmaster-General, or his deputies or agents on his behalf, refuse to receive on board any such boats or vessels such freight or cargo as the said Postmaster-General, his deputies or agents shall consider excessive or likely to impede or hinder the conveyance of the mails with due expedition as aforesaid, and also shall and will on such request cause to be relanded any such freight or cargo if already received on board.

5. That a separate and secure cabin shall be allotted, in each and every of the said steam-vessels, for the deposit of the said mails and bags, and for the person who for the time being shall have the care and custody of the same, which person shall be nominated by the Postmaster-General, his deputy or agent, and shall have his passage free of all expense.

6. That all the costs and charges of providing the said steam-vessels, and the furniture and tackle thereof, and the fuel for the same, and of keeping the said vessels constantly seaworthy and in repair, and all the wages and salaries of the officers, engineers, seamen, and servants employed in or about the management of such vessels, and all sea and other risks, port charges, duties, pilotage, and every other expense whatsoever relative to the same, shall be wholly paid and borne by the said General Steam Navigation Company and their successors.

7. That the said General Steam Navigation Company and their successors, and all officers, seamen, servants, and other persons in their service, or employed by them in or about any such steam-boats or vessels as aforesaid, shall and will at all times, during the continuance of this present contract, observe, fulfil, and obey the directions, orders, and regulations of the Postmaster-General for the time being, and his deputies and agents in all matters and things relative to the times of sailing of such boats or vessels, and the places of calling or ultimate destination or starting of the same, and to the conveyance, landing, and receiving of the mails and despatches, and to the fitness and seaworthiness of any steam-boats or vessels so to be employed as aforesaid, and providing of others in the place of those that shall be declared by the Postmaster-General, his deputies or agents, not fit or appropriate for the service aforesaid, and also relative to the repairs of any boats or vessels so to be employed, and the conduct of the officers and men employed in the same, and the removal of any of them for misconduct, and also relative to the mode of receipt and delivery of the said mails and bags of letters at the ports and places aforesaid, and all other matters and things whatsoever having reference or relation to this present contract or agreement, and the several stipulations herein contained.

8. That in case any steam vessel to be employed for the purposes aforesaid shall, from any cause whatever, become disabled, or shall be blocked up by ice while on her passage, or while in any foreign port, then, and in any such case, the said General Steam Navigation Company and their successors shall and will forthwith, and without any delay whatever, engage, hire, or provide some other proper and sufficient steam vessel; or if there should not be any steam vessel in port, then, and in such case only, some other sufficient boat or vessel for the conveyance of the said mails and despatches: And this Indenture also witnesseth, that, in consideration of the covenants and agreements hereinbefore contained on the part of the said General Steam Navigation Company, he, the said Francis Nathaniel, Marquis of Conyngham, doth hereby, for himself, his heirs, executors, and administrators, covenant, promise, and agree, with and to the said General Steam Navigation Company, and their successors, in manner following: that is to say, that he, the said Francis Nathaniel, Marquis of Conyngham,

or his successors, Postmaster-General for the time being, shall and will, during the continuance of this present contract or agreement, cause or procure to be paid unto the said General Steam Navigation Company and their successors, with and out of the revenue of the General Post-office, the clear yearly sum of £17,000 of lawful money of Great Britain, by four equal quarterly payments, the first quarterly payment thereof to be made on the 15th day of March next: And it is hereby mutually agreed and declared between and by the same parties to these presents, that these presents and the several covenants, stipulations, and agreements herein contained, shall remain and subsist in full force and virtue, and shall continue so to subsist until and unless one of the said contracting parties shall deliver, or cause to be delivered, unto the other of them, at or after the expiration of the said term of twelve calendar months, notice in writing of his or their desire to terminate the same; and from and immediately after the expiration of three calendar months from the date of any such notice this present contract, stipulation, or agreement shall absolutely cease and determine accordingly: And it is hereby also provided, agreed, and declared, that it shall not be lawful or competent to or for the said General Steam Navigation Company, or their successors, at any time or times during the continuance of this contract to give, grant, bargain, sell, assign, set, let, underlet, or otherwise part with or dispose of this present contract or undertaking, or the benefit, advantage, or profit thereof, or any part thereof, or of the several covenants, matters, and things herein contained, or any of them, to any person or persons whomsoever, for the whole or any part of the term or period hereinbefore mentioned, anything to the contrary thereof in any wise notwithstanding: And it is hereby further provided, agreed, and declared between and by the parties to these presents, that if at any time during the continuance of this present contract, any breach shall be made or committed by or on the part of the said General Steam Navigation Company, or their successors, in any of the covenants, agreements, matters, and things hereinbefore contained, and on the part of the said Company and their successors to be observed and performed, then and in any such case it shall and may be lawful to and for the said Francis Nathaniel, Marquis of Conyngham, and his successors, Postmaster-General for the time being, at any time thereafter, and without any previous notice to be given to the said General Steam Navigation Company or their successors by any writing under his hand, absolutely to revoke, determine, and make void this present contract and all and every the covenants, agreements, matters, and things herein contained, and thereupon the same shall absolutely cease and determine accordingly, anything to the contrary thereof in any wise notwithstanding: And it is hereby lastly provided, agreed, and declared, between and by the parties to these presents, that all and every the directions, orders, regulations, and notices of, from, or by the said Francis Nathaniel, Marquis of Conyngham, or his successors, Postmaster-General for the time being, or his deputies or agents, relative to this agreement, or any of the clauses, provisoes, and stipulations herein contained, shall, at the option of such Postmaster-General, his deputies, or agents, be either delivered to the Master, Commander, or any other officer or servant of the said General Steam Navigation Company, in charge of any steam-boat or vessel employed for the purposes aforesaid, or be delivered or left at the office for the time being of the said Company in London. In witness whereof the said Francis Nathaniel, Marquis of Conyngham, hath hereunto set his hand and seal, and the said General Steam Navigation Company have caused their common seal to be affixed hereunto, on the day and year first above written.

No. 33.

Contract for conveying the Mails between Liverpool and the Isle of Man.

No. 33.

Contract for conveying the Mails between Liverpool and the Isle of Man.

AGREEMENT made and entered into this 10th day of July, 1833, between the Most Noble Charles Duke of Richmond, His Majesty's Postmaster-General, of the one part, and Philip Garrett, of Douglas, in the Isle of Man, surgeon, Robert Banks, of the parish of Onchan, in the same island, gentleman, and William Duff, of Douglas aforesaid, merchant, Directors of the Mona Isle Steam-Boat Company, of the other part.

FIRST,—The said Philip Garrett, Robert Banks, and William Duff, for the considerations hereinafter mentioned, do hereby for themselves jointly, and severally, and their respective executors and administrators, promise and agree with and to the said Charles Duke of Richmond, his executors and administrators, in manner following, that is to say,

First,—That they, the said Philip Garrett, Robert Banks, and William Duff, their executors or administrators, shall, and will, from the 11th day of July instant, to the 11th day of July, 1834, convey in safety, from the Post-office in Liverpool to the Post-office in Douglas, Isle of Man, and from the Post-office in Douglas, Isle of Man, to the Post-office in Liverpool, all such of His Majesty's mails and bags of letters as the Postmaster-General for the time being, or the Deputy Postmasters, of Liverpool and Douglas aforesaid, or any or either of them shall from time to time require on such days in the week as the Postmaster-General for the time being shall, from time to time, direct or appoint, not exceeding twice in each week from Liverpool to the Isle of Man, and twice in each week from the Isle of Man to Liverpool, by a steam-boat of not less than 140 tons burthen, with skilful and competent officers, and a sufficient crew of able seamen, to be supplied and maintained in manner, and under and subject to the regulations and agreements, hereinafter mentioned and contained.

Second,—That the said steam-boat shall proceed on her voyage outwards and homewards immediately after the mails and despatches shall be received on board.

Third,—That all the costs and charges of providing the said steam-boat, and the furniture and tackle thereof, and of keeping the same constantly seaworthy and in repair, and all the

wages and salaries of the officers, seamen, and servants, employed in or about the management of such steam-boat, and all sea-risk, port charges, duties, and other expenses relative to the same, shall be wholly paid and borne by the said Philip Garrett, Robert Banks, and William Duff, their executors, or administrators.

Fourth,—That the said Philip Garrett, Robert Banks, and William Duff, their executors and administrators, shall and will, at all times during the continuance of this contract, observe, fulfil, and obey the directions, orders, and regulations of the Postmaster-General for the time being, and his surveyors, deputies, and agents, in all matters and things relative to the fitness or seaworthiness of any steam-boat so to be employed as aforesaid, and in providing another steam-boat in the place of such as shall be declared by the Postmaster-General, his surveyors, deputies, or agents, not fit or appropriate for the service aforesaid; and also relative to the repairs of any steam-boat so to be employed, and the conduct of the officers and men employed in the same, and the removal of any of them for misconduct; and also relative to the mode of receipt and delivery of the said mails and bags of letters, and all other matters or things whatsoever having reference or relation to this present contract or agreement, and the several stipulations herein contained.

Fifth,—That in case the said Philip Garrett, Robert Banks, and William Duff, or any of them, their, or any of their executors or administrators, or any officers or other persons to be employed by them, shall at any time or times refuse to allow the said steam-boat to proceed to sea on the respective days, and at the respective times which the Postmaster-General for the time being shall, from time to time, direct or appoint, or shall neglect to supply or furnish such steam-boat for the purposes aforesaid, as shall be, from time to time, approved of by the said Charles Duke of Richmond, or his successors, Postmaster-General for the time being, his surveyors, deputies, or agents, or shall disobey, or refuse to obey, any of the orders or directions of the said Charles Duke of Richmond, or his successors, Postmaster-General for the time being, their deputies or agents, in breach of this agreement, or of the stipulations herein contained, or in case any steam-boat so to be employed for the purposes aforesaid shall become disabled while on her passage, or while in port, then, and in every such case it shall be lawful for the said Postmaster-General, for the time being, or his agent or agents, to engage, hire, or employ any other steam-boat or vessel for the postage and conveyance of the said mails and bags of letters; and that they, the said Philip Garrett, Robert Banks, and William Duff, their executors or administrators, shall and will pay, discharge, and satisfy, all the costs, charges, and expenses of, and attending the engaging, hiring, and employing any such other steam-boat or vessel for the purposes last aforesaid. And, in consideration of the premises, and of the due and faithful performance of this agreement by the said Philip Garrett, Robert Banks, and William Duff, their executors or administrators, in the aforesaid service, the said Charles Duke of Richmond doth hereby for himself, his heirs, executors, and administrators, undertake, promise, and agree, to and with the said Philip Garrett, Robert Banks, and William Duff, their executors and administrators, that he, the said Charles Duke of Richmond, or his successors, Postmaster-General for the time being, shall, and will pay, or cause to be paid, unto the said Philip Garrett, Robert Banks, and William Duff, their executors or administrators, out of the revenue of the Post-office, the sum of £850 of lawful money of Great Britain, in four equal quarterly payments, the first quarterly payment thereof to be made on the 11th day of October next. And it is hereby mutually agreed and declared between and by the said parties to these presents, that this present contract or agreement, and the several covenants and agreements herein contained shall continue in force from the 11th of July instant until the 11th day of July, 1834; subject, nevertheless, to three calendar months' notice of determining the same, to be given in writing, by either party to the other party, which notice may be given to expire at any time of the year. In witness whereof, the said parties have hereunto set their hands the day and year above written.
